

Contents

- 1. Introduction 1
- 2. Steady State and Non-Steady State
Technological Processes 5
 - 2.1 Definitions 5
 - 2.1.1 The Technological Process 5
 - 2.1.2 Dynamics, Process Dynamics 7
 - 2.2 Modelling of the Steady State Melt Spinning Process 10
 - 2.2.1 Goal of Modelling 10
 - 2.2.2 Balance Equations 11
 - 2.2.3 Example: Heat Transfer 12
 - 2.3 Modelling of Non-Steady State Dynamic Process 13
 - 2.3.1 System and Signal 13
 - 2.3.2 Model 14
 - 2.4 Characterisation of the Dynamic Process Behaviour 16
 - 2.4.1 Differential Equation 16
 - 2.4.2 Description in the Time Range; Step Response 16
 - 2.4.3 Description in the Frequency Range 17
 - 2.4.4 Correlation and Power Density Spectrum Functions... 21
 - 2.5 Dynamic Process Analysis and Modelling 26
 - 2.5.1 Methodical Procedure 26
 - 2.5.2 Detailed Example (Drawing Process) 30
- 3. Modelling of Steady State Fibre Formation
Process in Melt Spinning 43
 - 3.1 Steady State Single Fibre Formation Process 43
 - 3.1.1 Definition: What Does Fibre Formation Mean? 43
 - 3.1.2 Fundamental Balance Equations 44
 - 3.1.3 Interaction Between Fibre and Environment 52
 - 3.1.4 Response of the Polymer Melt 59
 - 3.1.5 Structure Development 65
 - 3.1.6 Material Properties of Spinnable Polymers 70
 - 3.1.7 Practical Modelling: Simulation of Fibre Formation ... 78
 - 3.2 Multifilament Spinning 90

3.2.1	Peculiarities in Multifilament Spinning	90
3.2.2	Models of Interaction Between the Fibre Bundle and the Environment	93
3.2.3	Continuum Theory	95
3.2.4	Example 1: Numerical Simulation of Fibre Formation in the Staple Fibre Melt Spinning Process	112
3.2.5	Example 2: Modelling of Fibre Formation in the Spun- bonded Nonwoven Process	124
3.2.6	Summary	131
3.3	Limits and Spinnability	132
3.3.1	Maximum and Minimum Fineness	132
3.3.2	Visco-elastic Failure and Nonlinear Effects	138
4.	Dynamics of Fibre Formation Processes	145
4.1	Task	145
4.2	Melt Spinning of Polymers	146
4.2.1	Variable Fibre Fineness	146
4.2.2	Variable Fibre Orientation	166
4.2.3	Complex Proceedings in the Fibre Formation Distance	170
4.3	Glass Fibre Spinning; Variable Fibre Fineness	170
4.3.1	Cause-Effect-Scheme	170
4.3.2	Functional Block Diagram	172
4.3.3	Evaluation and Results	177
4.4	Dynamics of Fibre Formation in the Spun Yarn Spinning Pro- cess	182
4.4.1	Task	182
4.4.2	Dynamic Transfer Behaviour of Carding Engines	182
4.4.3	Dynamic Transfer Behaviour of Drafting Zones in Drafting Systems	189
4.5	Necessary Measuring and Gauge Lengths	204
5.	Dynamics of Fibre Processing Processes	209
5.1	Dynamics of the Fibre Transport	209
5.1.1	Task	209
5.1.2	Dynamic Model to the Description of a Delay Thread Line	210
5.1.3	Dynamic Model to the Description of a Dead Time Thread Line	211
5.1.4	Dynamic Model to the Description of a Friction Thread Line	213
5.1.5	Examples of Quantitative Investigations of Fibre Trans- port Processes	216
5.2	Dynamics of the Twist Transfer at the False Twist Texturing	241
5.2.1	Task	241
5.2.2	Mathematic-Dynamic Model	242

5.3	Dynamics of Fibre Heating and Cooling	258
5.3.1	Task	258
5.3.2	Differential Equation for the Description of Heat Trans- fer at Fibres	259
5.3.3	Technological Application Examples	265
6.	Dynamics of the Tensile Force and its Importance for Pro- cess Stability	277
6.1	Task	277
6.2	Connection Between Fibre Fineness and Fibre Tensile Force Variations	280
6.3	Dynamic Properties of Measuring Sensors	282
6.4	Evaluation of the Tensile Force Time Function	285
6.4.1	Stationary Evaluation	285
6.4.2	Dynamic Evaluation; Auto Correlation and Auto Power Density Spectrum Functions	287
6.5	Combination Measurements and Evaluations	301
6.5.1	Task and Measurements	301
6.5.2	Dynamic Evaluation and Cross-Correlation Functions (CCF)	303
	References	311
	List of Symbols	327
	Index	347

Dynamics of Fibre Formation and Processing
Modelling and Application in Fibre and Textile Industry

Beyreuther, R.; Brüning, H.

2007, XIII, 365 p., Hardcover

ISBN: 978-3-540-46221-7
