

Contents

1	Introduction	
2	Preparation of Wood and Herb Samples for Microscopic Analysis	
2.1	Labeling, Transport and Storage	3
2.2	Sample Preparation for Microtome Sectioning	3
2.3	Sample Preparation for Episcopic Microscopic Examination	3
2.4	Making Thin Sections	4
2.5	Staining of Thin Sections for Permanent Slides	5
2.6	Preparation of Impermanent Slides	5
2.7	Microscopic Observation and Photography	5
3	Growth Zones and Stems in Relation to Genetic Ecological Factors	
3.1	The Xylem As an Indicator of Genetic Identity	7
3.1.1	Woody Plants Without Vessels	8
3.1.2	Woody Plants with Vessels	8
3.1.3	Woody Plants with Vessels and Included Phloem	8
3.2	Intra-annual Anatomical Variations	8
3.2.1	Flat Ground Tissue Cells with Thick Cell Walls	8
3.2.2	Recurrent Change of Different Cell Types and Cell Sizes in Deciduous Trees	12
3.2.3	Periodic Storage of Cell Compounds	14
3.2.4	Cell-Type-Specific Cell Wall Thickening and Lignification	14
3.3	Interannual Anatomical Variations (Tree-Ring Boundaries)	14
3.3.1	Thick-Walled, Flat Fibers	14
3.3.2	Periodic Intra-annual Change Between Different Cell Types and Sizes in Deciduous Trees in Relation to Earlywood and Latewood Boundaries	17
3.3.3	Periodic Deposition of Crystals	19
3.3.4	Variable Cell Wall Thickening and Lignification	19
3.3.5	Variable Genetic Predisposition	20
3.5	Lateral Variations	20
3.5.1	Discontinuous Growth and Variable Anatomical Structures	22
3.5.2	Wavy Tree-Ring Pattern, Displaced Rings and Irregular Stem Cross Sections	25
3.5.2.1	Relationship Between Tree-Ring Patterns and Rays and Vessel Density	26
3.5.2.2	Relationship Between Tree-Ring Pattern and Changed Differentiation Processes	28
3.5.2.3	Relationship Between Tree-Ring Pattern and Pith Shape	30
3.5.2.4	Relationship Between Tree-Ring Pattern and Adventitious and Latent Buds	30
3.5.3	Variable Axial Fiber Arrangement, Especially Spiral Grain	30

3.6	Growth Zones in Perennial Plants with Very Short or Long Stem Axes: Perennial Herbaceous Plants, Dwarf Shrubs, Climbers and Lianas	30
3.6.1	Plants with Short Stem Axes	32
3.6.1.1	Existence of Growth Rings in Dwarf Shrubs and Herbaceous Plants in Central Europe	32
3.6.1.2	The Anatomy of Growth Rings in Herbaceous Plants	32
3.6.1.3	Age Determination of Herbaceous Plants	40
3.6.1.4	Relationship Between Growth Rings in Herbaceous Plants and Their Growth Form and Taxonomy	41
3.6.1.5	Relationship Between Growth Rings in Herbaceous Plants and Site Conditions	41
3.6.1.6	Common Characteristics in the Growth Ring Structure of Herbaceous Plants	41
3.6.1.7	Outlook	41
3.6.2	Plants with Extremely Elongated Stem Axes, in Particular from Temperate and Semiarid Regions	42
3.6.3	Comparison of Wood Anatomical Structures of Dwarf Shrubs and Liana-Like Woody Plants	43
4	Modification of the Tree-Ring Anatomy Due to Ageing and the Position Within the Tree	
4.1	Ontogenesis of the Xylem in Roots and Shoots	45
4.1.1	The Center of the Root	45
4.1.2	The Center of the Sprout	48
4.2	Ontogenetic and Physiological Ageing of Wood	49
4.2.1	Definition of the Term Ageing	49
4.2.2	The Effects of Environmental Factors on Ageing	49
4.2.2.1	Variable Speed of Ageing Within the Tree Crown and the Root System	49
4.2.2.2	Speed of Ageing Under Various Site Conditions	52
4.2.2.3	Genotypic Ageing	52
4.2.2.4	Cell-Specific Ageing in the Xylem	52
4.2.3	Anatomical Differences Between Juvenile and Adult Wood	52
4.3	Branches and Twigs	56
4.3.1	The Dendrochronological Importance of Branches and Twigs	56
4.3.2	Bud-Scale Scars and Tree Rings in Long and Short Shoots Expressing Crown Dynamics	56
4.3.2.1	Bud-Scale Scars	56
4.3.2.2	Tree Rings in Long and Short Shoots in Four Different Tree Species	57
4.3.3	The Elimination of Branches and Twigs	60
4.3.3.1	Growth Phase Before Death	60
4.3.3.2	Compartmentalization of Dead Branches and Twigs	63
4.3.3.3	Active Shedding of Short Shoots (Cladoptosis)	63
4.3.4	Shoot Metamorphosis	66
4.3.4.1	Short Shoots in Conifers	66
4.3.4.2	Thorns on Deciduous Woody Plants	66
4.3.4.3	Spheroblasts	66
4.3.4.4	Needle Traces	66
4.3.4.5	Traces of Male Inflorescences in Conifers	69
4.3.4.6	Traces of Female Cones in Conifers	70
4.3.4.7	Traces of Fruit Stalks in Deciduous Woody Plants	70

4.4	Roots	72
4.4.1	The Dendrochronological Importance of Roots	72
4.4.2	Structural Characteristics of Latent Roots	72
4.4.3	Root Growth Subject to Little Mechanical Stress	72
4.4.4	Root Growth Subject to Mechanical Stress (Except Buttress Roots)	72
4.4.5	Structural Changes Caused by the Exposure of Roots	75
4.4.6	Structural Changes Caused by the Burial of Shoots	79
4.4.6.1	Burial of Slow-Growing Seedlings	79
4.4.6.2	Burial of the Shoot Base and of Creeping Shoots	79
4.4.6.3	Burial of Conifer Branches Close to the Ground	79
4.4.6.4	The Establishment of Spruce Seedlings in Sphagnum Cushions ...	81
4.4.7	Sprout and Root Formation in Stems and Roots (Latent and Adventitious Sprouts/Roots)	81
5	Modification of the Tree-Ring Structure Due to Extreme Site Conditions	
5.1	The Influence of the Regional Climate on Ecophylogenetic Development	85
5.2	Modifications Caused by Extreme Weather Conditions	85
5.2.1	Cambium Injury Caused by Hailstorms	85
5.2.2	Cambium Injury Caused by Ice Storms	87
5.2.3	Cambium Injury Caused by Lightning	87
5.2.4	Cambium Injury Caused by Frost (Frost Rings)	87
5.3	Modifications Caused by Extreme Hydrological Changes in the Soil	92
5.3.1	Artificial Raising of the Groundwater Level in a Drained Bog	93
5.3.2	Rising Coastline Water Level Due to Subsidence of the Land	94
5.3.3	Lowering of the Groundwater Level in Waterlogged Clay Soils ...	94
5.3.4	Reduced Soil Water Content After the Abandonment of Old Agricultural Irrigation Systems	96
5.3.5	The Periodical Drying-out of Riverbeds and Coastlines	97
5.3.5.1	Ring-Porous Wood Species in a Riverbed with a Regulated Water Level	99
5.3.5.2	Diffuse-Porous Wood Species in the Bed of a Torrent with a Variable Water Level	101
5.3.6	Periodical Summer Drought in Mediterranean Climates	101
5.3.7	Stress Reactions in Potted Plants	101
5.4	Insolation As a Factor of Growth	102
5.4.1	The Anatomy of Plants Growing in Light or Shade	102
5.4.2	General Wood-Anatomical Characteristics of Densely Shaded Plants	103
5.4.3	Reduced Light Intensity Modifies the Stand and Affects Mortality	107
5.4.3.1	Reduced Light Intensity in Each Individual's Crown	110
5.4.3.2	Reduced Light Intensity in the Canopy of Even-Aged Stands	110
5.4.3.3	Reduced Light Intensity in Open, Man-Made Stands	110
5.4.3.4	Reduced Light Intensity in Tree Stands with Several Even-Aged Tree Generations	112
5.4.3.5	Reduced Light Intensity in Coppice Woods	112
5.4.3.6	Reduced Light Intensity on Abandoned Agricultural Land	112
5.4.4	Improved Light Conditions Favor Growth and the Formation of New Stands	112
5.5	Modifications Due to Permanently Unfavorable Environmental Conditions	117

5.5.1	Dwarf Conifers from Permafrost Sites	118
5.5.2	Dwarf Conifers in Rock Crevices	118
5.5.3	Dwarf Conifers on Raised Bogs and Fens	120
5.5.4	Dwarf Shrubs at the Limit of Their Distribution in the Alpine Belt	120
5.5.4.1	Dwarf Shrubs on a South-Facing Slope Above the Timberline ...	121
5.5.4.2	Trailing Azalea on Wind-Exposed Ridges in the Alpine Belt	123
5.5.4.3	Plants Colonizing Rocky Outcrops in Snow-Covered, Exposed Locations	124
5.5.4.4	Dwarf Willows in Alpine Snow Pockets	124
5.5.5	Young Conifers at a Rising Upper Timberline	124
5.5.6	Shrubs and Dwarf Shrubs on Shallow Soils in Arid Deserts	124
6	Modification of the Tree-Ring Structure Caused by Compression and Tension	
6.1	Optimization of Vital Functions During Extreme Mechanical Stress	127
6.2	Characteristics of Reaction Wood	127
6.2.1	Compression Wood in Gymnosperms	128
6.2.2	Tension Wood in Angiosperms	129
6.2.3	The Dendrochronological Information Obtained in Reaction Wood	132
6.3	Eccentric and Irregularly Shaped Stems Without Reaction Wood	132
7	Modification of the Tree-Ring Structure Due to Defoliation and Pollarding	
7.1	The Reaction of Conifers	140
7.1.1	The Artificial Removal of Needles from the Conifer <i>Pinus pinaster</i> Before Bud-Break	140
7.1.2	Removing Whole trees in Managed forests (pollarding). Living stumps of Anastomotic Trees	142
7.1.3	The Removal of Branches: Cutting off Lower Branches and Branch Pruning	144
7.1.4	Tree Needle Loss Due to Shading	144
7.1.5	Defoliation by Insects	144
7.1.5.1	Larch Budmoth Outbreaks	146
7.1.5.2	<i>Spruce Budworm Outbreaks (Choristoneura occidentalis and Choristoneura fumiferana)</i>	146
7.1.6	Defoliation Caused by Fungi	149
7.1.7	Defoliation of Fir Trees Caused by Unknown Pathogens (Forest Decline in Firs)	152
7.1.8	Defoliation Caused by Anthropogenic Air Pollution	153
7.1.8.1	Sulfur Dioxide: Dead and Dying Larches, Spruces and Birches in the Forest Decline Area of Norilsk, Russia	153
7.1.8.2	Sulfur Dioxide: Dead Fir Trees at Lake Baikal	154
7.1.8.3	Radiation Damage	155
7.2	The Reaction of Deciduous Wood	157
7.2.1	Tree Crown Removal	157
7.2.1.1	The Management of Young, Dense Stands	157
7.2.1.2	Decapitation Beeches	160
7.2.2	Branch Lopping in Cultural Landscapes	162
7.2.2.1	Branch Lopping to Provide Leaf Fodder	162
7.2.2.2	Branch Lopping of Fruit and Parkland Trees	165

7.2.2.3	Hedge Cutting	167
7.3	Defoliation Caused by Insects	170
7.4	Defoliation Caused by Mammals: Browsing	170
7.5	Defoliation Caused by Fire	170
7.6	Adverse Light Conditions Eliminate the Assimilation Area	176
7.6.1	Leafless Beeches with a Live Cambium in Coppice Woods	176
7.6.2	Dying Long Shoots on Sweet Chestnuts	176
7.7	Defoliation and Death Due to Unknown Pathogens	176
8	Modification of the Tree-Ring Structure Due to Destructive Agents in Wood and Bark	
8.1	Relationship Between Causes, Physiological Processes and Tree-Ring Characteristics – an Overview	179
8.2	The Reaction of the Cambium	181
8.2.1	Secretory Ducts	181
8.2.1.1	Resin Ducts	181
8.2.1.2	Gum Ducts in Deciduous Wood	185
8.2.2	Resin Pockets (Pitch Pockets)	187
8.2.3	Callus Tissue	188
8.2.4	Wound Closure	188
8.2.4.1	Hidden Cambium Injuries	194
8.2.4.2	Open Cambium Injuries	194
8.3	The Reaction of Live, Differentiating Cells	195
8.4	The Reaction of Fully Differentiated Cells	197
8.4.1	Tylosis	197
8.4.2	Polyphenols in Heartwood and Wound-Margin Cells	199
8.4.3	Chemical Boundaries and Demarcation Lines	199
8.4.3.1	Chemical Boundaries	199
8.4.3.2	Demarcation Lines	202
8.5	The Reaction Within Dead Wood	202
8.5.1	Tangential Cracks Without Callus Tissue in Live Tree Stems	202
8.5.2	Radial Cracks in Live Stems	203
8.6	Effects of Geophysical Events on Trees	205
8.6.1	Avalanches, Snow Movement, Rock Fall, Landslides, Floods, Moving Ice Plates, Wind	205
8.6.2	Volcanoes	205
8.6.3	Forest Fires	207
8.6.4	Marks in the Cambium	207
8.7	The Reaction to Biological-Mechanical Influences	208
8.7.1	Damage of Trampling by Red Deer	208
8.7.2	Traces of Bark-Eating Rodents	210
8.7.3	Cambium Injuries Caused by Woodpeckers	210
8.7.4	Pith Flecks, Callus Spots and Galls: Traces of Cambium-Damaging Insects	214
8.7.5	Tumorous Growth Caused by Fungi	215
8.7.5.1	Stem Rust	215
8.7.5.2	Witches'-Broom on Silver Fir	215
8.7.5.3	Beech Bark Canker	218
8.7.5.4	Bacterial Canker in Ash Trees	218
8.7.5.5	Tumors on Conifers	218
8.7.5.6	Stem Hyperplasia	218
8.7.6	Sweet Chestnut Bark Canker	220
8.7.7	Dutch Elm Disease	220

8.7.8	Honey Fungus	222
8.7.9	The Death of Twigs on Fruit Trees	222
8.7.10	Mistletoe	222
9	Modification of the Tree-Ring Structure Due to Deformed Stems and Anastomosis	
9.1	Natural Anastomosis	229
9.1.1	Phase One: the Effects of Pressure	229
9.1.2	Phase Two: Fusion	231
9.2	The Ecological Importance of Natural Anastomosis	231
9.3	Grafting	232
10	Modification of the Tree-Ring Structure Due to Wood Decay	
10.1	Problems for Dendrochronology Because of Wood Decay	237
10.2	Wood Decay Without Microorganisms (Abiotic Decomposition)	237
10.3	Wood Decay Due to Microorganisms	237
10.3.1	The Biology of Wood Decay Due to Microorganisms	237
10.3.2	Organisms That Live in Wood Seen Under the Microscope	239
10.3.3	Fungal Infestation and Decomposition of Wood	239
10.3.3.1	Blue Stain	239
10.3.3.2	Red Stain	239
10.3.3.3	White Rot	239
10.3.3.4	Brown Rot	239
10.3.3.5	Soft Rot	244
10.4	Wood Decay in the Absence of Oxygen (Anaerobic Conditions) ..	244
10.4.1	Decay in the Living Stem	244
10.4.2	Decay Under Water	245
10.4.3	The Conservation of Wet Wood	245
10.5	Wood Decay Due to Insects	245
10.6	Mechanical Wood Deformation	245
10.7	Fossilization and Mineralization of Wood	245
10.8	Carbonization	246
11	Conclusions	
	References	257
