<b>1</b>	<b>What are finite elements?</b>	<b>1</b>
1.1	Introduction	1
1.2	Key points of the FE method	1
1.3	Potential energy	6
1.4	Projection	8
1.5	The error of an FE solution	13
1.6	A beautiful idea that does not work	15
1.7	Set theory	16
1.8	Principle of virtual displacements	23
1.9	Taut rope	29
1.10	Least squares	33
1.11	Distance inside = distance outside	37
1.12	Scalar product and weak solution	40
1.13	Equivalent nodal forces	42
1.14	Concentrated forces	44
1.15	Green's functions	51
1.16	Practical consequences	55
1.17	Why finite element results are wrong	57
1.18	Proof	64
1.19	Influence functions	69
1.20	Accuracy	80
1.21	Why resultant stresses are more accurate	86
1.22	Why stresses at midpoints are more accurate	88
1.23	Why stresses jump	99
1.24	Why finite element support reactions are relatively accurate	99
1.25	Gauss points	104
1.26	The Dirac energy	110
1.27	How to predict changes	113
1.28	The influence of a single element	126
1.29	Retrofitting structures	130
1.30	Local errors and pollution	136
1.31	Adaptive methods	147
1.32	St. Venant's principle	172
1.33	Singularities	175
1.34	Actio = reactio?	177

1.35	The output	181
1.36	Support conditions	183
1.37	Equilibrium	184
1.38	Temperature changes and displacement of supports	187
1.39	Stability problems	193
1.40	Interpolation	197
1.41	Polynomials	199
1.42	Infinite energy	208
1.43	Conforming and nonconforming shape functions	209
1.44	Partition of unity	211
1.45	Generalized finite element methods	213
1.46	Elements	220
1.47	Stiffness matrices	221
1.48	Coupling degrees of freedom	224
1.49	Numerical details	226
1.50	Warning	235
<b>2</b>	<b>What are boundary elements?</b>	<b>239</b>
2.1	Influence functions or Betti's theorem	240
2.2	Structural analysis with boundary elements	247
2.3	Comparison finite elements—boundary elements	262
<b>3</b>	<b>Frames</b>	<b>269</b>
3.1	Introduction	269
3.2	The FE approach	270
3.3	Finite elements and the slope deflection method	289
3.4	Stiffness matrices	292
3.5	Approximations for stiffness matrices	298
3.6	Cables	305
3.7	Hierarchical elements	309
3.8	Sensitivity analysis	313
<b>4</b>	<b>Plane problems</b>	<b>327</b>
4.1	Simple example	327
4.2	Strains and stresses	334
4.3	Shape functions	337
4.4	Plane elements	338
4.5	The patch test	344
4.6	Volume forces	346
4.7	Supports	347
4.8	Nodal stresses and element stresses	357
4.9	Truss and frame models	363
4.10	Two-bay wall	365
4.11	Multistory shear wall	365
4.12	Shear wall with suspended load	370

4.13	Shear wall and horizontal load .....	375
4.14	Equilibrium of resultant forces .....	378
4.15	Adaptive mesh refinement .....	383
4.16	Plane problems in soil mechanics .....	386
4.17	Incompressible material .....	393
4.18	Mixed methods .....	393
4.19	Influence functions for mixed formulations .....	399
4.20	Error analysis .....	401
4.21	Nonlinear problems .....	401
<b>5</b>	<b>Slabs</b> .....	415
5.1	Kirchhoff plates .....	416
5.2	The displacement model .....	421
5.3	Elements .....	422
5.4	Hybrid elements .....	425
5.5	Singularities of a Kirchhoff plate .....	429
5.6	Reissner–Mindlin plates .....	431
5.7	Singularities of a Reissner–Mindlin plate .....	436
5.8	Reissner–Mindlin elements .....	439
5.9	Supports .....	441
5.10	Columns .....	443
5.11	Shear forces .....	451
5.12	Variable thickness .....	452
5.13	Beam models .....	459
5.14	Wheel loads .....	460
5.15	Circular slabs .....	461
5.16	T beams .....	462
5.17	Foundation slabs .....	469
5.18	Direct design method .....	476
5.19	Point supports .....	477
5.20	Study .....	480
5.21	Sensitivity analysis .....	480
<b>6</b>	<b>Shells</b> .....	485
6.1	Shell equations .....	485
6.2	Shells of revolution .....	488
6.3	Volume elements and degenerate shell elements .....	490
6.4	Circular arches .....	491
6.5	Flat elements .....	493
6.6	Membranes .....	498

<b>7</b>	<b>Theoretical details</b>	503
7.1	Scalar product	503
7.2	Green's identities	508
7.3	Green's functions	516
7.4	Generalized Green's functions	519
7.5	Nonlinear problems	526
7.6	The derivation of influence functions	529
7.7	Weak form of influence functions	535
7.8	Influence functions for other quantities	539
7.9	Shifted Green's functions	541
7.10	The dual space	552
7.11	Some concepts of error analysis	560
7.12	Important equations and inequalities	568
	<b>References</b>	579
	<b>Index</b>	593

Structural Analysis with Finite Elements

Hartmann, F.; Katz, C.

2007, XII, 598 p. 408 illus., Hardcover

ISBN: 978-3-540-49698-4
