Part I Principles of Nutrient Cycling

1	Composition and Cycling of Organic Carbon in Soil	1
	<i>Jeffrey A. Baldock</i>	
1.1	Introduction	1
1.2	Composition of Soil Organic Carbon	2
1.2.1	Chemical Fractionation of SOC	3
1.2.2	Physical Fractionation of SOC	4
1.3	Consistency between SOC Fractionation Methods and Pools of SOC in Simulation Models	8
1.4	Factors Controlling SOC Contents	13
1.5	Biochemical Recalcitrance	18
1.6	Biological Capability and Capacity for Degrading Organic Materials	20
1.7	Physical Mechanisms of Protection	21
1.8	Rate Modifiers and Duration of Exposure	23
1.9	Conceptual Model of the Role of Stabilising Mechanisms in Defining Chemical Structure	25
1.10	Conclusions	27
	References	27
2	The Nitrogen Cycle in Terrestrial Ecosystems	37
	<i>Ann McNeill, Murray Unkovich</i>	
2.1	Introduction	37
2.2	N Transfers within the Terrestrial N Cycle	39
2.2.1	Decomposition, Mineralisation-Immobilisation Turnover, and Nitrification	39
2.2.2	Plant Uptake of Soil N	41
2.2.3	Herbivores and N Transfers	42
2.3	Inputs of Nitrogen to Terrestrial Ecosystems	44
2.3.1	Nitrogen Fixation	44
2.3.2	Nitrogen Deposition	48

2.4	N Losses	49
2.4.1	Ammonia Volatilisation	50
2.4.2	Processes Producing Gaseous Oxides of Nitrogen and N ₂	51
2.4.3	Leaching	54
2.4.4	Erosion	55
2.5	Conclusions	56
	References	57
3	Phosphorus and Sulphur Cycling in Terrestrial Ecosystems	65
	<i>Else K. Bünemann, Leo M. Condron</i>	
3.1	Introduction	65
3.1.1	Forms and Amounts of Phosphorus and Sulphur in Terrestrial Ecosystems	65
3.1.2	Cycling of Phosphorus and Sulphur in Terrestrial Ecosystems	67
3.1.3	Chapter Aims	68
3.2	Methods and Approaches to Study Phosphorus and Sulphur Cycling	69
3.2.1	Analytical Methods	69
3.2.2	Experimental Approaches	76
3.3	Examples of Phosphorus and Sulphur Cycling at Different Scales	76
3.3.1	Microbial Immobilisation and Mineralisation Processes ..	76
3.3.2	Impact of Anthropogenic Sulphur Deposition on Sulphur Cycling as Revealed by Stable Isotope Techniques	80
3.4	Changes in Phosphorus and Sulphur Cycling Following Afforestation of Grassland	82
3.5	Conclusions	84
	References	85
4	Cycling of Micronutrients in Terrestrial Ecosystems	93
	<i>Zed Rengel</i>	
4.1	Introduction	93
4.2	Spatial Considerations in Micronutrient Cycling	94
4.2.1	Recycling Nutrients from Deep Soil Layers	94
4.2.2	Off-Site Impact	95
4.3	Micronutrient Cycling in Agroecosystems	95
4.3.1	Fertilisers	95
4.3.2	Biofertilisers	97
4.3.3	Crop Residues	99
4.3.4	Manures, Composts and Other Organic Amendments ..	103
4.3.5	Contribution of Livestock to Micronutrient Cycling on Grazed Pastures	105
4.3.6	Crop and Variety Selection	106
4.4	Micronutrient Cycling in Forest Ecosystems	107

4.4.1	Litterfall, Stemflow and Throughfall	108
4.4.2	Burning	111
4.4.3	Organic Amendments	111
4.4.4	Fertilisers	112
4.5	Conclusions	112
4.6	Future Research	112
	References	113
5	Root Exudates and Nutrient Cycling	123
	<i>Günter Neumann</i>	
5.1	Introduction	123
5.2	Root Exudates and Organic Rhizodeposition	124
5.2.1	Rhizodeposition – Definition and Quantity	124
5.2.2	Release Mechanisms	125
5.2.3	Rhizodeposition as Affected by External Factors	130
5.3	Root Exudates and Chemical Mobilisation of Nutrients	130
5.3.1	Phosphorus Mobilisation by Carboxylates	131
5.3.2	Root Secretory Phosphohydrolases	135
5.3.3	Mobilisation of Iron and Micronutrients by Phytosiderophores	136
5.4	Protective Functions of Root Exudates Against Abiotic Stress	138
5.4.1	Aluminium Toxicity	138
5.4.2	Drought Stress	140
5.4.3	Bicarbonate Stress	141
5.5	Root Exudates and Plant-Microbe Interactions	141
5.6	Knowledge-Gaps and Perspectives	144
	References	146
6	Plant-Microbe Interactions in the Rhizosphere and Nutrient Cycling	159
	<i>Petra Marschner</i>	
6.1	Introduction	159
6.2	Colonisation of the Rhizosphere by Microorganisms	160
6.3	Nitrogen Cycling	162
6.3.1	Nitrogen Mineralisation	162
6.3.2	Dinitrogen Fixation	164
6.4	Phosphorus Cycling	165
6.5	Iron Cycling	166
6.6	Manganese Cycling	168
6.7	Mycorrhiza	169
6.8	Plant Growth-Promoting Rhizosphere Microorganisms	171
6.9	Rhizosphere Priming Effect	171
6.10	Conclusions	172
	References	173

Part II Nutrient Cycling Budgets in Terrestrial Ecosystems

7	The Role of Crop Residues in Improving Soil Fertility	183
	<i>Bhupinderpal-Singh, Zed Rengel</i>	
7.1	Introduction	183
7.2	Effects of Crop Residue Management	
	on Soil Chemical Properties	187
7.2.1	Soil Organic Matter	187
7.2.2	Nutrient Status and Availability in Soil	191
7.2.3	Soil pH	194
7.3	Effects of Crop Residue Management	
	on Soil Physical Properties	196
7.3.1	Soil Temperature	196
7.3.2	Soil Moisture	197
7.3.3	Soil Hydraulic Conductivity and Infiltration	197
7.3.4	Soil Bulk Density and Porosity	198
7.3.5	Soil Aggregation and Soil Structure	198
7.3.6	Soil Erosion	199
7.3.7	Water Repellence of Soil	200
7.4	Effects of Crop Residue Management	
	on Soil Biological Properties	200
7.4.1	Soil Microorganisms	201
7.4.2	Soil Meso- and Macro-fauna	204
7.5	Conclusions	205
	References	206
8	Nutrient Cycling Budgets in Managed Pastures	215
	<i>David Scholefield, Elaine Jewkes, Roland Bol</i>	
8.1	Introduction	215
8.2	Developments in Nutrient Budget Keeping	217
8.2.1	Nitrogen	217
8.2.2	Phosphorus	218
8.2.3	Carbon	218
8.2.4	Potassium	219
8.2.5	Sulphur	220
8.2.6	Other Nutrients	221
8.2.7	Nutrient Budget Methods	221
8.3	Relationships of Nutrient Budgets to Efficiency of Nutrient Use	223
8.3.1	Nutrient Supply to the Soil and Nutrient Availability	223
8.3.2	Nutrient Flows through the Plant	229
8.3.3	Nutrient Flows through the Herbivore	230
8.3.4	Excretal Returns	231
8.3.5	Outputs and Losses	233
8.4	Effects of Management and Site Conditions	235

8.5	Nutrient Surpluses for some Typical European Pasture Systems and their Interpretation	238
8.6	Conclusions	245
	References	246
9	Natural Grasslands – a Case Study in Greece	257
	<i>Z. Koukoura</i>	
9.1	Introduction	257
9.2	Biomass Loss during Decomposition of Plant Residues	258
9.3	Effect of Residue Composition on Decomposition Rates	260
9.4	Mineralisation and Immobilisation of Nutrients	264
9.5	Conclusions	266
	References	266
10	Dryland Ecosystems	271
	<i>Anne Hartley, Nichole Barger, Jayne Belnap, Gregory S. Okin</i>	
10.1	Introduction	271
10.2	Nitrogen Cycle	272
	10.2.1 Nitrogen Inputs from Biological Fixation	272
	10.2.2 Nitrogen Losses	280
	10.2.3 Summary of N Budgets in Dryland Ecosystems	291
10.3	Phosphorus	291
	10.3.1 Phosphorus Inputs	292
	10.3.2 Geochemical and Biological Controls on Phosphorus Availability	292
10.4	Other Nutrient Cycles	294
10.5	Conclusions	298
	References	299
11	Nutrient Cycling in the Tundra	309
	<i>Sari Stark</i>	
11.1	Introduction	309
11.2	Components of Tundra Nutrient Cycling	311
	11.2.1 Mineralisation, Nitrification, Denitrification, and N Fixation	311
	11.2.2 Microbial Turnover and Mineralisation-Immobilisation Dynamics in Tundra Nutrient Cycles	312
	11.2.3 Can Plants Compete with Soil Microorganisms for Nutrients in Tundra Soils?	313
	11.2.4 Organic Nutrient Sources	315
11.3	Factors Affecting the Rate of Nutrient Cycling in Tundras	316
	11.3.1 Regulation of Decomposition and Mineralisation by Soil Temperature During the Growing Season	316

11.3.2	The Significance of Soil Temperatures Outside the Growing Season	318
11.3.3	Feedback Mechanisms between Soil Nutrients and Organic Matter Decomposition	320
11.3.4	Mammalian Herbivores and Nutrient Cycling in the Tundra	321
11.4	Conclusions	325
	References	326
12	Nutrient Cycling in Forests and Heathlands: an Ecosystem Perspective from the Water-Limited South	333
