1 Use of the Z Accelerator for Isentropic and Shock Compression Studies

<i>Marcus D. Knudson</i>	1
1.1 Introduction	1
1.2 Experimental Technique	3
1.2.1 ICE Experimental Configuration	3
1.2.2 MHD Modeling	5
1.2.3 Pulse Shaping	10
1.2.4 Magnetically Accelerated Flyer Plates	13
1.3 Analysis Techniques	17
1.4 Applications	22
1.4.1 Isentropic EOS Measurements	22
1.4.2 Phase Transitions	24
1.4.3 Constitutive Properties	28
1.4.4 Magnetically Accelerated Flyer Plates	30
1.5 Conclusion	38
References	40

2 Ultrashort Laser Shock Dynamics

<i>D.S. Moore, S.D. McGrane, and D.J. Funk</i>	47
2.1 Introduction	47
2.2 Laser Shock Generation	48
2.2.1 Laser Driven Flyers	48
2.2.2 Ablated Reactive Layer Shock Launch	49
2.2.3 Direct Laser Drive	50
2.3 Laser Shock Diagnostics	60
2.3.1 Interferometry	60
2.3.2 Frequency Domain Interferometry (FDI)	61
2.3.3 Ultrafast Interferometric Microscopy	62
2.3.4 Dynamic Ellipsometry	66

XII Contents

2.4	Affect on Optical Properties	67
2.4.1	Shocked Metals	67
2.4.2	Shocked Dielectrics	73
2.5	Ultrafast Spectroscopy	76
2.5.1	UV/Visible	76
2.5.2	Raman	77
2.5.3	Coherent Raman	78
2.5.4	Infrared Absorption	81
2.6	Measurement of Shock Wave Properties	85
2.6.1	Rise Time Measurements	86
2.7	Ultrafast Shock-Induced Chemistry	92
2.7.1	Shock-Induced Reaction in Al Nanoparticles	93
2.7.2	Shock-Induced Reaction in Polyvinyl Nitrate Thin Films ..	94
	References	98

**3 Failure Waves and Their Effects on Penetration Mechanics
in Glass and Ceramics**

<i>S.J. Bless and N.S. Brar</i>	105
3.1 Introduction	105
3.2 Summary of Observations of Plane Failure Waves	106
3.3 Experimental Methods and Particular Results	108
3.3.1 Chemical Composition and Physical Properties of Various Glasses	108
3.3.2 Elastic Compression of Glass	108
3.3.3 Failure Waves in Glass Plates	110
3.3.4 Failure Waves in Glass Bars	115
3.3.5 Failure Waves in Diverging Stress Fields	119
3.3.6 Failure Waves in Polycrystalline and Single Crystal Materials	121
3.4 Proposed Mechanisms and Modeling of Failure Waves	123
3.4.1 Degradation of Shear Modulus of Glass	123
3.4.2 Phase Transformation	124
3.4.3 Elastic Strain Energy	124
3.4.4 Inhomogeneous Shear (Microcracking) Flow	125
3.4.5 Phenomenological Model Based on Damage-Induced, Self-propagating Failure Wave	127
3.4.6 Heterogeneous Microdamage from Stress Concentrations ..	127
3.4.7 Mesoscale Models	133
3.5 Terminal Ballistics	133
3.5.1 Ceramic Armor and Failure Waves	133
3.5.2 Brittle Projectiles	136
References	137

4 Empirical Equations of State for Solids

<i>Ralph Menikoff</i>	143
4.1 Introduction	143
4.2 Physics Background	144
4.2.1 Thermodynamics	145
4.2.2 Shock Relations	148
4.2.3 Example Hugoniot Loci	151
4.3 Complete EOS	154
4.3.1 Ideal Gas EOS	154
4.3.2 Stiffened Gas EOS	155
4.3.3 Hayes EOS	156
4.3.4 Generalized Hayes EOS	159
4.4 Mie–Grüneisen EOS	166
4.4.1 Hugoniot as Reference	168
4.4.2 Isentrope as Reference	174
4.5 Porous Materials	175
4.6 Equilibrium Mixture	178
4.7 Wide Domain Model EOS	180
4.7.1 Generalized Mie–Grüneisen EOS	180
4.7.2 Tabular EOS	181
4.8 Concluding Remarks	182
References	185

5 Elastic–Plastic Shock Waves

<i>Ralph Menikoff</i>	189
5.1 Introduction	189
5.2 Uniaxial Flow	190
5.2.1 Hyperelastic Model	191
5.2.2 Flow Equations	194
5.3 Shock Locus	196
5.3.1 Example	199
5.4 Illustrative Wave Profiles	201
5.4.1 Split Elastic–Plastic Wave	202
5.4.2 Overdriven Plastic Wave	206
5.4.3 Additional Wave Structures	206
5.5 VISAR Time Histories	210
5.6 Extension to Three-dimensions	214
5.6.1 Elastic Flow	214
5.6.2 Plastic Flow	218
5.7 Summary	220
References	223

6 Elements of Phenomenological Plasticity: Geometrical Insight, Computational Algorithms, and Topics in Shock Physics

<i>R.M. Brannon</i>	225
6.1 Introduction	225
6.2 Notation and Terminology	226
6.3 Rate-Independent Plasticity	232
6.3.1 Applicability of the Governing Equations	235
6.3.2 Discussion of the Governing Equations	237
6.3.3 Interpreting and Integrating the Stress Rate	243
6.4 Nonhardening von Mises (J_2) Plasticity	248
6.5 Phantom Inelastic Partitioning	250
6.6 Rate Dependence	254
6.7 Plastic Wave Speeds	263
6.8 Conclusions	269
References	271

7 Numerical Methods for Shocks in Solids

<i>David J. Benson</i>	275
7.1 Introduction	275
7.2 The History of Hydrocodes	276
7.3 The Discretization of Time and Space	277
7.4 The Structure of Hydrocodes	279
7.5 The Lagrangian Step	280
7.5.1 The Fundamental Importance of the Discrete Gradient Operator	280
7.5.2 Updating the State Variables	282
7.5.3 The Finite Element Method	284
7.5.4 A Finite Difference Method: Integral Differencing	287
7.5.5 The Godunov Method	289
7.5.6 Particle Methods	291
7.5.7 The Shock Viscosity	298
7.6 Contact Boundary Conditions	300
7.6.1 Contact Force Calculations	302
7.7 The Eulerian Step	304
7.7.1 Modification of the Lagrange Step for Eulerian Formulations: Multi-Material Elements	304
7.7.2 Interface Reconstruction	307
7.7.3 Transport Methods	308
7.7.4 Transport in One Dimension	311
7.7.5 Transport in Two and Three Dimensions	313
7.8 Future Research Directions	314
References	315

8 Mesoscale Modeling of Shocks in Heterogeneous Reactive Materials	
<i>Mel R. Baer</i>	321
8.1 Introduction	321
8.2 Microstructure of Composite Explosives	322
8.3 Some Historical Observations	323
8.4 Detonation at the Mesoscale	324
8.5 Mesoscale Modeling Approaches	325
8.5.1 Particle-Based Methods	326
8.5.2 Quasiparticle Methods	328
8.5.3 Direct Numerical Simulation Methods.....	329
8.6 Mesoscale Stochastic Models	333
8.6.1 Mesoscale Model of a Granular Explosive.....	335
8.6.2 Mesoscale Model of a Composite Explosive	335
8.6.3 Mesoscale Model of Detonation in a Granular Explosive ...	337
8.7 Experimental Studies of Mesoscale Behavior	339
8.7.1 Investigations of Ordered Granular Material	340
8.7.2 Investigations of Disordered Heterogeneous Materials	341
8.7.3 Observations of Mesoscale Reaction Effects	343
8.8 Homogenization Methods	344
8.8.1 Linking Modeling to Observations	345
8.9 Future Prospective and Summary	349
