Navigational Surgery of the Facial Skeleton

- Detailed and well-illustrated information for experienced surgeons and those in training
- First publication on the topic
- Highly relevant for clinical practice

Publication Date:
December 2006

Fields of Interest:
Oral and Maxillofacial Surgery

Target Groups:
Maxillofacial surgeons, plastic surgeons, ENT surgeons, and neurosurgeons

Computer-assisted techniques in the surgery of the facial skeleton including the skull base are depicted for the very first time in this atlas of navigational surgery. Experienced surgeons as well as trainees will benefit from the detailed and well-illustrated information on the use of computer technology in clinical routine, accompanied by the experimental basis of intraoperative accuracy. The authors' inventions in the field of non-invasive registration have led to widespread use of computer-assisted simulation and navigational surgery in this field, so the time is right for a comprehensive publication on the topic. The interdisciplinary approach brings together maxillofacial surgeons, plastic surgeons, ENT surgeons, and neurosurgeons. New methods of non-invasive referencing and the use of virtual models in the field of oral and cranio-maxillofacial surgery are demonstrated. Clinical cases illustrate the practical use of this new technique.

2007 Approx. 140 p. 330 illus. in color. Hardcover
