
Contents

1	Unifying Themes in Finite Model Theory	1
1.1	Definability Theory	2
1.1.1	Classification of Concepts in Terms of Definitional Complexity	2
1.1.2	What More Do We Know When We Know a Concept Is L -Definable?	4
1.1.3	Logics with Finitely Many Variables	7
1.1.4	Distinguishing Structures: L -Equivalence and Comparison Games	8
1.1.5	Random Graphs and 0–1 Laws	10
1.1.6	Constraint Satisfaction Problems	11
1.2	Descriptive Complexity	12
1.2.1	Satisfaction	13
1.2.2	What Is a Logic for PTIME?	16
1.3	Finite Model Theory and Infinite Structures	18
1.4	Tame Fragments and Tame Classes	20
	References	22
2	On the Expressive Power of Logics on Finite Models	27
2.1	Introduction	27
2.2	Basic Concepts	28
2.3	Ehrenfeucht–Fraïssé Games for First-Order Logic	34
2.4	Computational Complexity	50
2.4.1	Complexity Classes	50
2.4.2	The Complexity of Logic	51
2.5	Ehrenfeucht–Fraïssé Games for Existential Second-Order Logic	54
2.6	Logics with Fixed-Point Operators	59
2.6.1	Operators and Fixed Points	60
2.6.2	Least Fixed-Point Logic	64
2.6.3	Datalog and Datalog(\neq)	74

2.6.4	The Complementation Problem for LFP_1 and a Normal Form for LFP	79
2.6.5	Partial Fixed-Point Logic	82
2.7	Infinitary Logics with Finitely Many Variables	86
2.7.1	The Infinitary Logic $L_{\infty\omega}^\omega$	87
2.7.2	Pebble Games and $L_{\infty\omega}^\omega$ -Definability	89
2.7.3	0–1 Laws for $L_{\infty\omega}^\omega$	97
2.7.4	Definability and Complexity of $L_{\infty\omega}^k$ -Equivalence	99
2.7.5	Least Fixed-Point Logic vs. Partial Fixed-Point Logic on Finite Structures	104
2.8	Existential Infinitary Logics with Finitely Many Variables ...	106
2.8.1	The Infinitary Logics $\exists L_{\infty\omega}^k$ and $\exists L_{\infty\omega}^k(\neq)$	107
2.8.2	Existential Pebble Games	109
2.8.3	Descriptive Complexity of Fixed Subgraph Homeomorphism Queries	116
	References	119
3	Finite Model Theory and Descriptive Complexity	125
3.1	Definability and Complexity	125
3.1.1	Complexity Issues in Logic	126
3.1.2	Model Checking for First-Order Logic	128
3.1.3	The Strategy Problem for Finite Games	129
3.1.4	Complexity of First-Order Model Checking	132
3.1.5	Encoding Finite Structures by Words	135
3.2	Capturing Complexity Classes	138
3.2.1	Capturing NP: Fagin’s Theorem	138
3.2.2	Logics That Capture Complexity Classes	144
3.2.3	Capturing Polynomial Time on Ordered Structures ...	145
3.2.4	Capturing Logarithmic Space Complexity	149
3.2.5	Transitive Closure Logics	151
3.3	Fixed-Point Logics	152
3.3.1	Some Fixed-Point Theory	153
3.3.2	Least Fixed-Point Logic	155
3.3.3	The Modal μ -Calculus	157
3.3.4	Parity Games	160
3.3.5	Model-Checking Games for Least Fixed-Point Logic ...	165
3.3.6	Definability of Winning Regions in Parity Games	169
3.3.7	Simultaneous Fixed-Point Inductions	170
3.3.8	Inflationary Fixed-Point Logic	174
3.3.9	Partial Fixed-Point Logic	177
3.3.10	Datalog and Stratified Datalog	180
3.4	Logics with Counting	186
3.4.1	Logics with Counting Terms	187
3.4.2	Fixed-Point Logic with Counting	188
3.4.3	Datalog with Counting	190

3.5	Capturing PTIME via Canonization	193
3.5.1	Definable Linear Orders	193
3.5.2	Canonizations and Interpretations	194
3.5.3	Capturing PTIME up to Bisimulation	198
3.5.4	Is There a Logic for PTIME?	203
3.6	Algorithmic Model Theory	205
3.6.1	Beyond Finite Structures	205
3.6.2	Finitely Presentable Structures	206
3.6.3	Metafinite Structures	210
3.6.4	Metafinite Spectra	213
3.6.5	Descriptive Complexity over the Real Numbers	216
3.7	Appendix: Alternating Complexity Classes	222
	References	225
4	Logic and Random Structures	231
4.1	An Instructive Example	231
4.2	Random Graphs	234
4.3	Extension Statements	235
4.4	Closure	237
4.5	The Almost Sure Theory	239
4.6	The Case p Constant	241
4.7	Countable Models	242
4.8	A Dynamic View	243
4.9	Infinite Spectra via Almost Sure Encoding	244
4.10	The Jump Condition	246
4.11	The Complexity Condition	247
4.12	Nonconvergence via Almost Sure Encoding	249
4.13	No Almost Sure Representation of Evenness	251
4.14	The Ehrenfeucht Game	253
4.15	About the References	254
	References	255
5	Embedded Finite Models and Constraint Databases	257
5.1	Introduction	257
5.1.1	Organization	258
5.2	Relational Databases and Embedded Finite Models	258
5.3	Constraint Databases	262
5.4	Collapse and Genericity: An Overview	266
5.4.1	Approaches to Proving Expressivity Bounds	267
5.5	Active-Generic Collapse	269
5.5.1	The Ramsey Property	269
5.5.2	Collapse Results	272
5.6	Natural-Active Collapse	273
5.6.1	Collapse: Failure and Success	274
5.6.2	Good Structures vs. Bad Structures: O-minimality	276

5.6.3	Collapse Theorem and Corollaries	277
5.6.4	Collapse Algorithm: the Linear Case	278
5.6.5	Collapse Algorithm: the General Case	280
5.6.6	Collapse Without O-minimality	285
5.6.7	Natural-Generic Collapse	287
5.7	Model Theory and Collapse Results	288
5.7.1	Pseudo-finite Homogeneity	289
5.7.2	Finite Cover Property and Collapse	290
5.7.3	Isolation and Collapse	292
5.8	The VC Dimension and Collapse Results	295
5.8.1	Random Graph and Collapse to MSO	298
5.8.2	Complexity Bounds for Generic Queries	299
5.9	Expressiveness of Constraint Query Languages	301
5.9.1	Reductions to the Finite Case	301
5.9.2	Topological Properties	303
5.9.3	Linear vs. Polynomial Constraints	305
5.10	Query Safety	307
5.10.1	Finite and Infinite Query Safety	308
5.10.2	Safe Translations	309
5.10.3	Finite Query Safety: Characterization	311
5.10.4	Infinite Query Safety: Reduction	316
5.10.5	Deciding Safety	319
5.10.6	Dichotomy Theorem for Embedded Finite Models	321
5.11	Database Considerations	322
5.11.1	Aggregate Operators	323
5.11.2	Higher-Order Features	326
5.12	Bibliographic Notes	330
	References	334
6	A Logical Approach to Constraint Satisfaction	339
6.1	Introduction	339
6.2	Preliminaries	340
6.3	The Computational Complexity of Constraint Satisfaction ...	344
6.4	Nonuniform Constraint Satisfaction	347
6.5	Monotone Monadic SNP and Nonuniform Constraint Satisfaction	350
6.6	Datalog and Nonuniform Constraint Satisfaction	352
6.7	Datalog, Games, and Constraint Satisfaction	355
6.8	Games and Consistency	357
6.9	Uniform Constraint Satisfaction and Bounded Treewidth	362

Finite Model Theory and Its Applications

Grädel, E.; Kolaitis, P.G.; Libkin, L.; Marx, M.; Spencer, J.;

Vardi, M.Y.; Venema, Y.; Weinstein, S.

2007, XIII, 440 p., Hardcover

ISBN: 978-3-540-00428-8
