Part I Probability Theory

1	Random Variables and Their Distributions	3
1.1	Spaces of Elementary Outcomes, σ -Algebras, and Measures ...	3
1.2	Expectation and Variance of Random Variables on a Discrete Probability Space	9
1.3	Probability of a Union of Events	14
1.4	Equivalent Formulations of σ -Additivity, Borel σ -Algebras and Measurability	16
1.5	Distribution Functions and Densities	19
1.6	Problems	21
2	Sequences of Independent Trials	25
2.1	Law of Large Numbers and Applications	25
2.2	de Moivre-Laplace Limit Theorem and Applications	32
2.3	Poisson Limit Theorem	34
2.4	Problems	35
3	Lebesgue Integral and Mathematical Expectation	37
3.1	Definition of the Lebesgue Integral	37
3.2	Induced Measures and Distribution Functions	41
3.3	Types of Measures and Distribution Functions	45
3.4	Remarks on the Construction of the Lebesgue Measure	47
3.5	Convergence of Functions, Their Integrals, and the Fubini Theorem	48
3.6	Signed Measures and the Radon-Nikodym Theorem	52
3.7	L^p Spaces	54
3.8	Monte Carlo Method	55
3.9	Problems	56

4	Conditional Probabilities and Independence	59
4.1	Conditional Probabilities	59
4.2	Independence of Events, σ -Algebras, and Random Variables ..	60
4.3	π -Systems and Independence	62
4.4	Problems	64
5	Markov Chains with a Finite Number of States	67
5.1	Stochastic Matrices	67
5.2	Markov Chains	68
5.3	Ergodic and Non-Ergodic Markov Chains	71
5.4	Law of Large Numbers and the Entropy of a Markov Chain ...	74
5.5	Products of Positive Matrices	76
5.6	General Markov Chains and the Doeblin Condition	78
5.7	Problems	82
6	Random Walks on the Lattice \mathbb{Z}^d	85
6.1	Recurrent and Transient Random Walks	85
6.2	Random Walk on \mathbb{Z} and the Reflection Principle	88
6.3	Arcsine Law	90
6.4	Gambler's Ruin Problem	93
6.5	Problems	98
7	Laws of Large Numbers	101
7.1	Definitions, the Borel-Cantelli Lemmas, and the Kolmogorov Inequality	101
7.2	Kolmogorov Theorems on the Strong Law of Large Numbers ..	103
7.3	Problems	106
8	Weak Convergence of Measures	109
8.1	Definition of Weak Convergence	109
8.2	Weak Convergence and Distribution Functions	111
8.3	Weak Compactness, Tightness, and the Prokhorov Theorem ..	113
8.4	Problems	116
9	Characteristic Functions	119
9.1	Definition and Basic Properties	119
9.2	Characteristic Functions and Weak Convergence	123
9.3	Gaussian Random Vectors	126
9.4	Problems	128
10	Limit Theorems	131
10.1	Central Limit Theorem, the Lindeberg Condition	131
10.2	Local Limit Theorem	135
10.3	Central Limit Theorem and Renormalization Group Theory ..	139
10.4	Probabilities of Large Deviations	143

10.5 Other Limit Theorems	147
10.6 Problems	151
11 Several Interesting Problems	155
11.1 Wigner Semicircle Law for Symmetric Random Matrices.....	155
11.2 Products of Random Matrices.....	159
11.3 Statistics of Convex Polygons	161
<hr/>	
Part II Random Processes	
<hr/>	
12 Basic Concepts	171
12.1 Definitions of a Random Process and a Random Field.....	171
12.2 Kolmogorov Consistency Theorem	173
12.3 Poisson Process	176
12.4 Problems	178
13 Conditional Expectations and Martingales	181
13.1 Conditional Expectations.....	181
13.2 Properties of Conditional Expectations	182
13.3 Regular Conditional Probabilities.....	184
13.4 Filtrations, Stopping Times, and Martingales	187
13.5 Martingales with Discrete Time	190
13.6 Martingales with Continuous Time	193
13.7 Convergence of Martingales	195
13.8 Problems	199
14 Markov Processes with a Finite State Space	203
14.1 Definition of a Markov Process	203
14.2 Infinitesimal Matrix	204
14.3 A Construction of a Markov Process	206
14.4 A Problem in Queuing Theory	208
14.5 Problems	209
15 Wide-Sense Stationary Random Processes	211
15.1 Hilbert Space Generated by a Stationary Process	211
15.2 Law of Large Numbers for Stationary Random Processes	213
15.3 Bochner Theorem and Other Useful Facts	214
15.4 Spectral Representation of Stationary Random Processes	216
15.5 Orthogonal Random Measures	218
15.6 Linear Prediction of Stationary Random Processes.....	220
15.7 Stationary Random Processes with Continuous Time.....	228
15.8 Problems	229

16	Strictly Stationary Random Processes	233
16.1	Stationary Processes and Measure Preserving Transformations	233
16.2	Birkhoff Ergodic Theorem	235
16.3	Ergodicity, Mixing, and Regularity	238
16.4	Stationary Processes with Continuous Time	243
16.5	Problems	244
17	Generalized Random Processes	247
17.1	Generalized Functions and Generalized Random Processes	247
17.2	Gaussian Processes and White Noise	251
18	Brownian Motion	255
18.1	Definition of Brownian Motion	255
18.2	The Space $C([0, \infty))$	257
18.3	Existence of the Wiener Measure, Donsker Theorem	262
18.4	Kolmogorov Theorem	266
18.5	Some Properties of Brownian Motion	270
18.6	Problems	273
19	Markov Processes and Markov Families	275
19.1	Distribution of the Maximum of Brownian Motion	275
19.2	Definition of the Markov Property	276
19.3	Markov Property of Brownian Motion	280
19.4	The Augmented Filtration	281
19.5	Definition of the Strong Markov Property	283
19.6	Strong Markov Property of Brownian Motion	285
19.7	Problems	288
20	Stochastic Integral and the Ito Formula	291
20.1	Quadratic Variation of Square-Integrable Martingales	291
20.2	The Space of Integrands for the Stochastic Integral	295
20.3	Simple Processes	297
20.4	Definition and Basic Properties of the Stochastic Integral	298
20.5	Further Properties of the Stochastic Integral	301
20.6	Local Martingales	303
20.7	Ito Formula	305
20.8	Problems	310
21	Stochastic Differential Equations	313
21.1	Existence of Strong Solutions to Stochastic Differential Equations	313
21.2	Dirichlet Problem for the Laplace Equation	320
21.3	Stochastic Differential Equations and PDE's	324
21.4	Markov Property of Solutions to SDE's	333
21.5	A Problem in Homogenization	336
21.6	Problems	340

22 Gibbs Random Fields	343
22.1 Definition of a Gibbs Random Field	343
22.2 An Example of a Phase Transition	346
Index	349

Theory of Probability and Random Processes

Koralov, L.; Sinai, Y.G.

2007, XI, 358 p., Softcover

ISBN: 978-3-540-25484-3
