1	Introduction	1
2	Seed Collection	7
2.1	Introduction	7
2.2	Biological Factors Influencing Collection	8
2.2.1	Type of Fruit and Seed	9
2.2.1.1	Wind-Dispersed (Anemochorous) Species	9
2.2.1.2	Animal-Dispersed (Zoochorous) Seed	10
2.2.2	Maturity and Seasonality	12
2.2.2.1	Maturity Criteria	12
2.2.2.2	Premature Collection	13
2.2.2.3	Seasonality	14
2.2.3	Damage to Trees and Future Seed Crop	14
2.3	External Factors Influencing the Choice of Collection Method	17
2.3.1	Identity of Mother Tree	17
2.3.2	Shape and Height of Seed Trees	18
2.3.3	Climate and Weather Conditions	20
2.3.4	Accessibility and Terrain	21
2.3.5	Efficiency, Labour Costs and Safety	22
2.3.6	Availability and Cost of Equipment	22
2.3.7	Ease of Prestorage and Processing	24
2.4	Some Genetic Considerations in Connection with Seed Collection	25
2.5	Collection Methods	30
2.5.1	Collection from the Ground	31
2.5.1.1	Accelerating Fruit Fall by Shaking	31
2.5.1.2	Picking from the Ground	34
2.5.2	Collection from the Crown	35
2.5.2.1	Low Trees with Access from the Ground or Low-Elevation Platforms/Vehicles	36
2.5.2.2	Reaching the Top of Large Trees by the Way of the Bole	42
2.5.2.3	Reaching the Top of Large Trees by Advanced Lines	47
2.5.2.4	Climbing Within and Harvesting Seeds from the Crown	51
2.5.3	Some Special Collection Methods	52

2.5.3.1	Collection from the Crown of Felled Trees	52
2.5.3.2	Shooting Down Branches	54
2.6	Safety and Routines	56
2.7	After Collection	61
2.7.1	Field Records and Sampling	61
2.7.2	Preprocessing, Field Storage and Transport	62
3	Seed Processing	67
3.1	Introduction	67
3.2	Use of Technology in Seed Processing	68
3.3	Precleaning	70
3.4	After-ripening	71
3.5	Seed Extraction	75
3.5.1	Seed Extraction from Dry Fruits	78
3.5.1.1	Mechanical Extraction of Dry Seed	88
3.5.1.2	Abrasion	93
3.5.1.3	Removal of Sticky Substance	93
3.5.2	Seed Extraction from Fleshy Fruits (Depulping)	95
3.5.3	Biological Extraction	103
3.6	Dewinging	106
3.7	Seed Cleaning	108
3.7.1	Cleaning According to Size	112
3.7.2	Cleaning According to Form, Sieves and the Indented Cylinder	115
3.7.3	Cleaning According to Gravity and Form – Winnowing and Blowing	116
3.7.4	Cleaning According to Gravity – Specific-Gravity Separators	118
3.7.4.1	Oscillating Table	119
3.7.4.2	Vibrator Separator	120
3.7.4.3	Pneumatic Table Separator or Specific-Gravity Table	122
3.7.5	Cleaning According to Form and Surface	124
3.7.6	Cleaning According to Specific Gravity – Flotation	126
3.8	Seed Grading and Upgrading	127
3.9	Adjusting Moisture Content for Storage	129
3.10	Seed Moisture and Principles of Seed Drying	132
3.10.1	Temperature and Humidity	133
3.10.2	Seed Moisture and Relative Humidity	134
3.10.3	Seed Moisture and Temperature	134
3.11	Potential Seed Damage During Processing	137
3.12	Safety Precautions During Processing	139
3.13	Maintaining Identity During Processing	140
4	Seed Storage	143
4.1	Introduction	143
4.2	Storability and Metabolism	144

4.3	Classification of Storage Physiology	145
4.4	Ecophysiological Role of Storage	150
4.5	Seed Longevity	151
4.6	Seed Ageing, A Physiological Background	155
4.6.1	Desiccation and Metabolism	155
4.6.2	Physiological Changes During Ageing	156
4.6.3	Longevity Models	159
4.7	Storage of Desiccation-Tolerant Seeds	161
4.7.1	Seed Moisture and Air Humidity	161
4.7.2	Temperature	163
4.7.3	Storage Atmosphere	163
4.8	Storage of Desiccation-Sensitive and Intermediate Seeds	164
4.8.1	Moisture Content and Desiccation Rate	167
4.8.2	Temperature	169
4.8.3	Storage Atmosphere and Media	170
4.8.4	Seed Treatment	170
4.8.5	Hydration–Dehydration	170
4.8.6	Storage of Germinants	171
4.9	Seed Store Units	171
4.9.1	Physical Setting of Storerooms	172
4.9.2	Storeroom Capacity	173
4.9.3	Cold Stores	175
4.9.4	Some Cost–Benefit Considerations for Seed Stores	179
4.10	Storage Containers	179
4.11	Storage Pests and Pathogens	181
4.11.1	Seed-Storage Insects	183
4.11.1.1	Storage Conditions	186
4.11.1.2	Seed Treatment	186
4.11.1.3	Insecticides	189
4.11.1.4	Biological Methods	190
4.11.2	Seed Fungi	191
4.11.2.1	Fungal Treatment	193
4.11.2.2	Application of Fungicides	196
4.11.2.3	Biological Methods	197
5	Seed Dormancy and Presowing Treatment	199
5.1	Introduction	199
5.2	Dormancy in a Regenerational Context	201
5.3	Physiology of Seed Dormancy	203
5.4	Terminology and Classification of Dormancy	206
5.5	Dormancy Types and Pretreatment Methods	207
5.5.1	Mechanical Dormancy	209
5.5.2	Physical Dormancy	212

5.5.2.1	Mechanical Scarification	218
5.5.2.2	Hot Water	221
5.5.2.3	Heating or Burning	222
5.5.2.4	Acid Pretreatment	223
5.5.2.5	Other Chemicals	227
5.5.2.6	Biological Methods	228
5.5.2.7	Selection of Pretreatment Method	228
5.5.3	Chemical Dormancy (Inhibitors)	228
5.5.4	Photodormancy	230
5.5.5	Thermodormancy	233
5.5.6	Underdeveloped Embryo	236
5.5.7	Combined Dormancy	237
5.6	Accelerating Germination	238
5.6.1	Soaking in Water	238
5.6.2	Growth Regulators	239
5.6.3	Priming and Fluid Drilling	241
5.7	Seed Coating and Pelleting	243
6	Sowing, Germination and Seedling Establishment	247
6.1	Introduction	247
6.2	The Physiological Events of Germination	249
6.2.1	Imbibition	250
6.2.2	Start of Metabolism – ‘Lag Phase’	252
6.2.3	Embryo Differentiation and Growth	253
6.2.4	Germination Types	255
6.2.5	Seedling Establishment	256
6.3	Raising Plants from Seed	259
6.3.1	Sowing Time	259
6.3.2	Germination and Growth Medium	261
6.3.3	Temperature and Light	262
6.3.4	Water and Air	263
6.3.5	pH	263
6.3.6	Sowing Depth	264
6.3.7	Orientation	265
6.3.8	Fungal Problems, ‘Damping-Off’ Disease	265
6.4	Seedlings in the Nursery	269
6.4.1	Light and Shade	269
6.4.2	Moisture	270
6.4.3	Fertilisers	271
6.4.4	Pruning	272
6.4.5	Hardening or Conditioning	274
6.5	Direct Seeding	274
6.6.	Microsymbiont Management	278

7	Seed Testing	281
7.1	Introduction	281
7.2	Timing Seed Testing	283
7.3	Standard Seed Testing	285
7.4	Sampling	287
7.4.1	Drawing Samples	288
7.4.1.1	Mixing and Division	289
7.4.1.2	Drawing Subsamples	290
7.4.2	Reduction of Sample Size for Testing	291
7.5	Purity	292
7.6	Seed Weight	296
7.7	Moisture Content	297
7.8	Viability and Germination	300
7.8.1	Viability Tests	302
7.8.1.1	Cutting Test	302
7.8.1.2	X-radiography	303
7.8.1.3	Topographical Tetrazolium Test	306
7.8.1.4	Excised Embryo Test	307
7.8.1.5	Hydrogen Peroxide Test	308
7.8.2	Germination Test	308
7.9	Other Seed Testing	315
7.9.1	Vigour Test	316
7.9.1.1	Germination Speed	316
7.9.1.2	Conductivity Test	318
7.9.1.3	Accelerated Ageing	319
7.9.1.4	Stress Test	319
7.9.1.5	Seedling Evaluation	320
7.9.2	Seed Health Testing	321
8	Seed Supply and Distribution	323
8.1	Introduction	323
8.2	Distribution Patterns for Forest Seed	326
8.3	Commercial Distribution	328
8.3.1	Market Analysis	328
8.3.2	Product Development, Diversity and Species	329
8.3.3	Seed Pricing	330
8.3.4	Marketing	332
8.3.5	Managing Seed Stock and Sale	336
8.3.5.1	Seed Orders	337
8.3.5.2	Labelling and Shipment Documents	338
8.4	Dispatch and Shipment of Seed	338
8.4.1	Packing Material	339
8.4.2	Seed Treatment	340

8.5	Seed Documentation	340
8.5.1	Documentation and Certification	343
8.5.2	Accession Numbers	344
8.5.3	Documentation Systems	346
8.5.4	Seed Source Records	347
8.5.5	Seed Lot Information	353
8.6	Rules and Regulations	353
8.6.1	Target Group	355
8.6.2	Legislation on Seed Quality	356
8.6.3	Legal Authorities and Implementation	359
8.6.4	Export and Import Regulations	360
Appendix 1: Seed Processing Table – Species List		365
Appendix 2: Seed Testing Forms		373
