|---|-----------|
| <b>1 Introduction.....</b>                            | <b>1</b>  |
| <b>2 Properties of Compressed Air .....</b>           | <b>5</b>  |
| 2.1 Mathematical Model of Air .....                   | 6         |
| 2.2 Atmospheric Air .....                             | 8         |
| 2.3 Definitions Related to Compressed Air.....        | 9         |
| <b>3 Thermodynamic Processes.....</b>                 | <b>11</b> |
| 3.1 Constant Volume Processes.....                    | 11        |
| 3.2 Constant Pressure Processes .....                 | 13        |
| 3.3 Constant Temperature Processes .....              | 18        |
| 3.4 Reversible Processes without Heat Transfer .....  | 18        |
| 3.5 Polytropic Processes .....                        | 20        |
| 3.6 General Processes .....                           | 22        |
| 3.7 Sonic Velocity .....                              | 23        |
| <b>4 Some Results from Fluid Mechanics.....</b>       | <b>25</b> |
| 4.1 Viscosity .....                                   | 26        |
| 4.2 Continuity Equation.....                          | 27        |
| 4.3 Free Discharge from Nozzles .....                 | 28        |
| 4.4 Orifice Flow.....                                 | 32        |
| 4.4.1 Incompressible Flow .....                       | 32        |
| 4.3.2 Compressible Flow .....                         | 34        |
| 4.5 Frictional Flow .....                             | 36        |
| <b>5 Engineering Flow Rate Calculations.....</b>      | <b>41</b> |
| 5.1 Mathematical Flow Rate Model .....                | 41        |
| 5.2 Flow Rate Characteristics of Restrictions.....    | 48        |
| 5.3 Simplified Flow Calculations .....                | 49        |
| 5.4 Flow Capacity Specifications in Data Sheets ..... | 50        |

|   |            |
|---|------------|
| <b>6 Modelling of Long Lines .....</b>                | <b>55</b>  |
| 6.1 Steady-State Losses of Long Lines.....            | 55         |
| 6.1.1 Fluid Mechanics Model .....                     | 57         |
| 6.1.2 Empirical Models .....                          | 58         |
| 6.1.3 Test Results .....                              | 59         |
| 6.2 Steady-State Losses of Fittings.....              | 62         |
| 6.3 Time Domain Models .....                          | 65         |
| 6.3.1 Derivation of Time Domain Model .....           | 65         |
| 6.3.2 Test Results in the Time Domain .....           | 69         |
| 6.4 Frequency Domain Models .....                     | 76         |
| <b>7 Electro-Mechanical Converters.....</b>           | <b>81</b>  |
| 7.1 Solenoids .....                                   | 81         |
| 7.1.1 Switching Solenoids .....                       | 83         |
| 7.1.2 Proportional Solenoids .....                    | 85         |
| 7.1.3 Pulse-Width Modulation .....                    | 86         |
| 7.2 Voice Coil and Plunger Type Systems .....         | 93         |
| 7.3 Piezoelectric Actuators .....                     | 94         |
| 7.3.1. Stack Translators .....                        | 94         |
| 7.3.2. Benders .....                                  | 94         |
| 7.3.3 Piezoelectric Elements in Pneumatic Valves..... | 95         |
| <b>8 Cylinders.....</b>                               | <b>99</b>  |
| 8.1 Stroke Cushioning .....                           | 102        |
| 8.2 Mathematical Model.....                           | 112        |
| 8.3 Cylinder Parameters .....                         | 116        |
| 8.3.1 Seal Friction.....                              | 116        |
| 8.3.2 Cylinder Leakage.....                           | 122        |
| 8.3.3 Coefficient of Heat Transfer .....              | 123        |
| <b>9 Non-Standard Linear Actuators.....</b>           | <b>127</b> |
| 9.1 Multi-Position and Tandem Cylinders.....          | 127        |
| 9.2 Rodless Cylinders .....                           | 130        |
| 9.2.1 Split-Seal or Slot Type .....                   | 130        |
| 9.2.2 Cable Type.....                                 | 132        |
| 9.2.3 Magnetic Type.....                              | 132        |
| 9.3 Bellows .....                                     | 133        |
| 9.4 Rolling-Diaphragm Cylinders .....                 | 137        |
| 9.6 Brake Chambers .....                              | 139        |
| 9.5 Muscle Actuators.....                             | 140        |
| 9.6 Impact and Knocking Cylinders .....               | 142        |

---

|   |            |
|---|------------|
| <b>10 Semi-Rotary Actuators.....</b>                        | <b>145</b> |
| 10.1 Cylinder Based Actuators.....                          | 145        |
| 10.2 Vane Type Actuators .....                              | 148        |
| <b>11 Air Motors and Air Turbines .....</b>                 | <b>151</b> |
| 11.1 Vane Motors .....                                      | 153        |
| 11.1.1 Principle of Operation of Vane Motors .....          | 154        |
| 11.1.2 Mathematical Model.....                              | 156        |
| 11.1.3 Speed Control .....                                  | 164        |
| 11.2 Air Turbines.....                                      | 168        |
| <b>12 Directional Control Valves.....</b>                   | <b>171</b> |
| 12.1 Design of Directional Control Valves .....             | 173        |
| 12.2 Operation of Directional Control Valves.....           | 175        |
| 12.3 Simulation Model of Directional Control Valves.....    | 181        |
| <b>13 Shut-Off Valves.....</b>                              | <b>185</b> |
| 13.1 Non-Return Valves .....                                | 185        |
| 13.2 Non-Return Valves with Override.....                   | 188        |
| 13.3 Shuttle Valves.....                                    | 189        |
| 13.4 Twin Pressure Valves .....                             | 190        |
| 13.5 Quick Exhaust Valves .....                             | 191        |
| <b>14 Pressure Control Valves.....</b>                      | <b>193</b> |
| 14.1 Spring Controlled Pressure Regulators.....             | 193        |
| 14.1.1 Design of Direct Acting Valves.....                  | 196        |
| 14.1.2 Simulation Model of a Pressure Reducing Valves ..... | 199        |
| 14.1.3 Linear model.....                                    | 202        |
| 14.1.4 Non-Linear Effects .....                             | 203        |
| 14.1.5 Design of Pilot Operated Valves .....                | 205        |
| 14.2 Electrically Operated Pressure Regulators .....        | 207        |
| 14.3 Pressure Regulators with Closed-Loop Control .....     | 209        |
| 14.3.1 Reports about Commercial Valves .....                | 212        |
| 14.4 Pressure Relief Valves.....                            | 212        |
| 14.5 Soft-Start Valves.....                                 | 213        |
| <b>15 Flow Control Valves .....</b>                         | <b>215</b> |
| 15.1 Throttling Valve .....                                 | 215        |
| 15.2 One-Way Flow Control Valve.....                        | 216        |
| 15.3 Delay Valve .....                                      | 217        |
| 15.4 Automatic Shut-Off Valves .....                        | 218        |
