

Contents

1	Introduction	1		
2	Primary Treatment	5		
2.1	Primary Treatment and “Damage Control”	5		
2.2	Tissue Debridement	5		
2.3	Vascular Injuries	9		
2.4	Peripheral Nerve Injury	11		
2.5	Primary Skeletal Stabilization	13		
2.6	Soft-Tissue Protection by External Fixation Frames	22		
2.7	The Management of Retained Bullets in the Limbs	22		
3	Definitive Reconstruction	27		
3.1	Final Soft-Tissue Coverage	27		
3.2	Definitive Skeletal Reconstruction	30		
3.2.1	Ilizarov Circular Fixation	32		
3.2.2	Hybrid Frames (Modular Combinations in Various Types of External Fixation Devices)	64		
3.2.3	Hinged Fixation of Peri-Articular Injuries	70		
3.2.4	Peculiarity of Elbow Joint Reconstruction: Methods of Isolated Hybrid External Fixation of Humeral, Ulnar, and Radial Bones	78		
3.2.5	Bilateral Lower Limb Injuries	85		
3.2.6	Lower Limb Salvage Where Contralateral Amputation is Present	85		
3.2.7	Primary Arthrodesis After High-Energy Injuries	85		
3.2.8	Primary Circular/Hybrid Fixation Frame Assembly in Emergency Conditions	121		
3.3	Limb Salvage in Severe Bone and Soft-Tissue Loss	121		
3.3.1	Bone Reconstruction by Callotasis	121		
3.3.2	Bone Reconstruction Using Bifocal Technique	144		
3.3.3	Fibular Bone Translation, Foot Stabilization	151		
3.4	Acute Temporary Mal-Alignment in Limb Salvage	164		
3.4.1	Acute Shortening	164		
3.4.2	Acute Shortening and Angulation	165		
3.4.3	Acute Shortening, Angulation, and Malrotation	165		
4	Rehabilitation	191		
4.1	Active and Passive Joint Mobilization in External Frames for Treatment of Peri-Articular Injuries	191		
4.2	Weight-Bearing During Stabilization in External Fixation Frame	195		
5	Treatment Algorithm for Missile Open Fractures of the Limbs	203		
6	Conclusions	205		
	References	217		
	Subject Index	221		

Severe Injuries to the Limbs

Staged Treatment

Lerner, A.; Reis, D.; Soudry, M.

2007, XI, 223 p., Hardcover

ISBN: 978-3-540-69892-0
