# Contents

---

## Part I Introduction

---

### Introduction – The Many-Fold Way of Contemporary High Energy Theoretical Physics

<i>E. Seiler, I.-O. Stamatescu</i> .....	3
1 Historical Remarks .....	5
2 Systematic Considerations .....	7
3 Conceptual Questions .....	14

---

## Part II Elementary Particle Theory

---

### The Standard Model of Particle Physics

<i>H. G. Dosch</i> .....	21
1 Introduction .....	21
2 The Development of the Standard Model .....	21
3 Systematic Description of the Standard Model .....	29
4 Achievements and Deficiencies of the Standard Model .....	37
5 Extrapolation to the Near Future .....	46
6 Conclusion .....	48
Literature .....	49

### Beyond the Standard Model

<i>M. G. Schmidt</i> .....	51
Selected References .....	56

---

## Part III Quantum Field Theory

---

### Quantum Field Theory: Where We Are

<i>K. Fredenhagen, K.-H. Rehren, and E. Seiler</i> .....	61
1 Introduction .....	61
2 Axiomatic Approaches to QFT .....	62

3	The Gauge Principle .....	67
4	The Field Concept .....	69
5	The Perturbative Approach to QFT .....	71
6	The Constructive Approach to QFT .....	73
7	Effective Quantum Field Theories .....	77
8	Gravity .....	79
9	Conclusions and Outlook .....	84
	References .....	85

---

## Part IV General Relativity Theory

---

### General Relativity

<i>J. Ehlers</i> .....	91
1 Introduction .....	91
2 Basic Assumptions of GRT .....	93
3 General Comments on the Structure of GRT .....	97
4 Theoretical Developments, Achievements and Problems in GRT ....	99
Selected References .....	103

### Remarks on the Notions of General Covariance and Background Independence

<i>D. Giulini</i> .....	105
1 Introduction .....	105
2 Attempts to Define General Covariance and/or Background Independence .....	106
3 Conclusion .....	118
References .....	119

---

## Part V Quantum Gravity

---

### Why Quantum Gravity?

<i>C. Kiefer</i> .....	123
References .....	130

### The Canonical Approach to Quantum Gravity:

#### General Ideas and Geometrodynamics

<i>D. Giulini and C. Kiefer</i> .....	131
1 Introduction .....	131
2 The Initial-Value Formulation of GR .....	133
3 Why Constraints .....	134
4 Comparison with Conventional Form of Einstein's Equations .....	135
5 Canonical Gravity .....	138
6 The General Kinematics of Hypersurface Deformations .....	140

7	Topological Issues	141
8	Geometric Issues	144
9	Quantum Geometrodynamics	145
10	Applications	148
	References	150

## **Loop and Spin Foam Quantum Gravity:**

### **A Brief Guide for Beginners**

	<i>H. Nicolai and K. Peeters</i>	151
1	Quantum Einstein Gravity	151
2	The Kinematical Hilbert Space of LQG	154
3	Area, Volume, and the Hamiltonian	157
4	Implementation of the Constraints	160
5	Quantum Space-Time Covariance?	164
6	Canonical Gravity and Spin Foams	167
7	Spin Foam Models: Some Basic Features	171
8	Spin Foams and Discrete Gravity	175
9	Predictive (Finite) Quantum Gravity?	178
	References	180

### **Loop Quantum Gravity: An Inside View**

	<i>T. Thiemann</i>	185
1	Introduction	185
2	Classical Preliminaries	189
3	Canonical Quantisation Programme	193
4	Status of the Quantisation Programme for Loop Quantum Gravity (LQG)	198
5	Physical Applications	236
6	Conclusions and Outlook	244
	References	254

## **Quantum Einstein Gravity: Towards an Asymptotically Safe Field Theory of Gravity**

	<i>O. Lauscher and M. Reuter</i>	265
1	Introduction	265
2	Asymptotic Safety	266
3	RG Flow of the Effective Average Action	268
4	Scale-Dependent Metrics and the Resolution Function $\ell(k)$	272
5	Microscopic Structure of the QEG Spacetimes	276
6	The Spectral Dimension	279
7	Concluding Remarks	283
	References	283

---

**Part VI String Theory**

---

**String Theory: An Overview**

<i>J. Louis, T. Mohaupt, and S. Theisen</i> .....	289
1 Introduction .....	289
2 Beyond the Standard Model .....	290
3 The Free String .....	293
4 The Interacting String .....	297
5 Compactification .....	299
6 Duality and M-Theory .....	302
7 AdS/CFT .....	305
8 Black-Hole Entropy .....	309
9 Approaches to Phenomenology .....	315
10 Open Questions .....	319
11 Some Concluding Remarks .....	321
Selected References .....	322

---

**Part VII Cosmology**

---

**Dark Energy**

<i>N. Straumann</i> .....	327
1 Introduction .....	327
2 Einstein's Original Motivation of the $\Lambda$ -Term .....	328
3 From Static to Expanding World Models .....	330
4 The Mystery of the $\Lambda$ -Problem .....	334
5 Luminosity–Redshift Relation for Type Ia Supernovae .....	340
6 Microwave Background Anisotropies .....	349
7 Observational Results and Cosmological Parameters .....	355
8 Alternatives to Dark Energy .....	359
A Essentials of Friedmann–Lemaître Models .....	366
B Thermal History below 100 MeV .....	374
C Inflation and Primordial Power Spectra .....	379
D Quintessence Models .....	391
References .....	393

**Appendix**

<i>K.-H. Rehren and E. Seiler</i> .....	399
1 Quantum Theory .....	399
2 Field Theory .....	400

3	Gauge Theory .....	401
4	The Standard Model.....	402
5	Symmetries .....	403
6	Spacetime and General Relativity .....	404
<b>Glossary</b>		
	<i>K.-H. Rehren, E. Seiler, and I.-O. Stamatescu</i> .....	407
	<b>Index</b> .....	415

Approaches to Fundamental Physics

An Assessment of Current Theoretical Ideas

Stamatescu, I.-O.; Seiler, E. (Eds.)

2007, XI, 422 p. 46 illus., 3 illus. in color., Hardcover

ISBN: 978-3-540-71115-5
