Preface	xvii
List of Abbreviations	xix
1. Introduction to Proteomics: a Brief Historical Perspective on Contemporary Approaches	1
<i>Jay J. Thelen</i>	
1.1 Introduction	1
1.2 Protein Separation and Detection for Proteome Investigations	2
1.2.1 Sodium Dodecyl Sulfate–Polyacrylamide Gel Electrophoresis	2
1.2.2 Two-Dimensional Gel Electrophoresis	3
1.2.3 Extracting Proteins From Plant Samples	3
1.2.4 In-Gel Detection of Proteins	4
1.3 Protein Identification using Mass Spectrometry	5
1.3.1 Peptide Mass Fingerprint Protein Identification	6
1.3.2 Tandem Mass Spectrometry Protein Identification	6
1.4 Differential Protein Profiling Approaches	8
1.4.1 Difference Gel Electrophoresis	8
1.4.2 Chemical Labeling Approaches for Relative Quantification	9
1.5 Outlook	9
References	10
2. High-Resolution Two-Dimensional Gel Electrophoresis: A Cornerstone of Plant Proteomics	14
<i>William J. Hurkman and Charlene K. Tanaka</i>	
2.1 Introduction	15
2.2 Protein Extraction	17
2.2.1 Total Proteomes	17
2.2.2 Subproteomes	18

2.3	Protein Solubilization	20
2.4	Protein Detection	21
2.5	Comparative Proteomics	22
2.6	Conclusions	24
	References	24
3.	An Introduction to Proteomics Data Analysis	29
	<i>Curtis G. Wilkerson</i>	
3.1	Introduction	29
3.2	Search Software	31
3.3	X!-Tandem	31
3.4	Informatics Considerations	38
3.5	Relation Database Management of Large Scale Proteomics Data. . .	39
	References	39
4.	Phosphoproteomics in Plants	41
	<i>Sergio de la Fuente van Bentem, Thomas S. Nühse, and Heribert Hirt</i>	
4.1	Introduction	41
4.2	Mitogen-Activated Protein Kinase Modules are Central Components of Plant Signalling Pathways	42
4.3	Mass Spectrometry-Based Approaches to Identify Phosphorylation Sites.	44
4.3.1	<i>Enrichment Strategies for MS-based Phosphoproteomic Analysis.</i>	45
4.3.2	<i>Global Identification of in vivo Phosphorylation Sites using IMAC Coupled to MS Technology</i>	46
4.4	Technologies Applicable to Studying Changes in the Phosphoproteome.	47
4.5	Plant Phosphoproteomics in the Future	48
	References	50
5.	High-Throughput Identification of Plant Protein Kinase Substrates	53
	<i>Birgit Kersten and Tanja Feilner</i>	
5.1	Introduction	53
5.2	Protein Microarray Technology	55
5.2.1	<i>History of Microarrays</i>	55
5.2.2	<i>Types of Protein Microarrays.</i>	57
5.2.3	<i>Establishment of Protein Microarrays for Phosphorylation Studies.</i>	57
5.3	Using Plant Protein Microarrays for the Identification of Potential Protein Kinase Substrates.	59
5.4	Potential Substrates of Arabidopsis MPK3 and MPK6	62

5.4.1	<i>Brief Bibliographic Overview of MAPK Pathway</i>	62
5.4.2	<i>Large-Scale Identification of Potential MPK3 and MPK6 Substrates</i>	64
5.5	Conclusions and Future Prospects	65
	References	65
6.	Discovery via Proteomics of a Novel Cell Signalling Pathway in Plants Involving Extracellular ATP	71
	<i>Stephen Chivasa, William J. Simon, John M. Hamilton, Keith Lindsey, and Antoni R. Slabas</i>	
6.1	Introduction	72
6.2	Proteomics of the ECM	72
6.2.1	<i>The Plant ECM</i>	72
6.2.2	<i>Extraction of Plant ECM Proteins</i>	73
6.2.3	<i>Identity of ECM Proteins</i>	73
6.3	Unravelling New Biological Functions of the Apoplast	75
6.3.1	<i>Phosphorylated and ATP-Binding ECM Proteins</i>	75
6.3.2	<i>Plant Extracellular ATP</i>	77
6.3.3	<i>In Search of the Role of Extracellular ATP</i>	78
6.4	Physiological Significance of Extracellular ATP Depletion-Induced Death	79
6.4.1	<i>Elicitor-Induced Cell Death is Regulated by External ATP</i>	80
6.5	How Does Extracellular ATP Function?	81
6.6	Conclusions and Future Studies	83
	References	84
7.	Cereal Proteomics	87
	<i>Hisashi Hirano</i>	
7.1	Introduction: Genomic and Proteomic Analyses	87
7.2	A Typical Procedure for Proteomic Analysis	89
7.3	Mass Spectrometry and Proteomic Analysis	89
7.4	Expression Profiles of Cereal Proteins	90
7.4.1	<i>2-DE-Based Profiling</i>	90
7.4.2	<i>Shotgun Profiling</i>	92
7.4.3	<i>Quantitative Profiling</i>	93
7.4.4	<i>Subcellular Localization of Cereal Proteins</i>	94
7.5	Post-Translational Modifications of Cereal Proteins	94
7.5.1	<i>Phosphorylation</i>	94
7.5.2	<i>Glycosylation</i>	95
7.5.3	<i>Other Post-Translational Modifications</i>	97
7.6	Protein-Protein Interactions in Cereals	97
7.6.1	<i>Immunoaffinity Purification/MS of Protein Complexes</i>	98
7.6.2	<i>Tandem Affinity Purification/MS of Protein Complexes</i>	98

7.6.3	<i>Blue Native-/SDS-PAGE/MS of Protein Complexes.</i>	98
7.6.4	<i>Protein Interaction Analysis Using Chromosome-Deletion Lines</i>	99
7.7	Proteome Informatics.	101
7.8	Perspectives	101
	References.	102
8.	Current Status of <i>Arabidopsis Thaliana</i> Proteomics	105
	<i>Sacha Baginsky and Wilhelm Gruissem</i>	
8.1	Current Status of Arabidopsis Proteomics.	105
8.2	Analysis of Post-Translational Modifications	108
8.3	Establishing Protein/Protein Interactions.	110
8.4	Revealing Proteome Dynamics by Relative and Absolute Protein Quantification	111
8.5	Towards a Complete Proteome Map for Arabidopsis	113
8.6	Conclusions	114
	References.	115
9.	Proteomics of <i>Medicago truncatula</i>	121
	<i>Zhentian Lei, Satish Nagaraj, Bonnie S. Watson, and Lloyd W. Sumner</i>	
9.1	Introduction	121
9.2	Proteomics: an Important Tool in Dissecting Legume Biology.	123
9.3	Proteomics of <i>M. truncatula</i>	125
9.3.1	<i>Proteomics of M. truncatula: Microbe Interactions.</i>	126
9.3.2	<i>Proteomics of M. truncatula: Tissues.</i>	129
9.4	Future Perspectives	132
	References.	133
10.	Proteomics of Seed Development in Oilseed Crops	137
	<i>Martin Hajduch, Ganesh Kumar Agrawal, and Jay J. Thelen</i>	
10.1	Introduction	138
10.2	Two-Dimensional Electrophoresis to Profile Protein Expression During Seed Filling in Soybean	139
10.3	Proteomic Analysis of Seed Filling in Rapeseed.	142
10.4	Comparison of Carbon Assimilation During Seed Filling in Soybean and Rapeseed.	143
10.5	Proteomics of Mature Soybean Seed.	146
10.6	Organelle and Tissue Specific Proteomics – Towards “In-Depth” Oilseed Proteome Characterization.	148

10.7	Presence of Functionally Diverse Phosphoproteins in Developing Rapeseed.	149
10.8	Conclusions and Future Perspectives.	151
	References.	151
11.	Proteome Analysis of <i>Nicotiana tabacum</i>	
	Suspension Cultures	155
	<i>Kris Laukens, Noor Remmerie, Thomas De Vijlder,</i> <i>Kim Henderickx, and Erwin Witters</i>	
11.1	Introduction	155
11.1.1	<i>The Tobacco BY-2 Cell Suspension</i>	<i>156</i>
11.1.2	<i>Analytical Work Flow Considerations</i>	<i>157</i>
11.2	Two-Dimensional Electrophoretic Analysis of Tobacco Cell Suspension Proteomes	158
11.2.1	<i>Tobacco BY-2 Proteome: a Reference Map</i>	<i>159</i>
11.2.2	<i>The Tobacco Phosphoproteome: Effects of Bacterial Lipopolysaccharides</i>	<i>160</i>
11.3	Proteome Analysis of Tobacco BY-2 Plastids	161
11.4	Blue-Native/SDS PAGE Analysis of Tobacco BY-2 Protein Complexes	162
11.5	Identification of Tobacco Proteins	164
11.6	Data Integration	165
	References.	167
12.	Cell Wall Proteome	169
	<i>Georges Boudart, Zoran Minic, Cécile Albenne,</i> <i>Hervé Canut, Elisabeth Jamet, and Rafael F. Pont-Lezica</i>	
12.1	Introduction: Cell Wall Proteins Before Proteomics	170
12.2	The Surprising Variety of Cell Wall Proteins.	170
12.2.1	<i>Glycoside Hydrolases.</i>	<i>172</i>
12.2.2	<i>Proteases</i>	<i>175</i>
12.2.3	<i>Lectins</i>	<i>176</i>
12.2.4	<i>Protein Inhibitors of Cell Wall Modifying Enzymes</i>	<i>176</i>
12.3	Proteomics as an Efficient Way to Depict Cell Wall Protein Structure	177
12.3.1	<i>N-Glycosylation</i>	<i>177</i>
12.3.2	<i>Proline Hydroxylation and O-Glycosylation</i>	<i>178</i>
12.3.3	<i>Addition of GPI Anchors</i>	<i>179</i>
12.3.4	<i>Phosphorylation.</i>	<i>179</i>
12.4	Emerging Functions for Cell Wall Proteins	180
12.5	Conclusions	181
	References.	182

13. Plasma Membrane Proteomics	186
<i>Erik Alexandersson, Niklas Gustavsson, Katja Bernfur, Per Kjellbom, and Christer Larsson</i>	
13.1 Introduction	186
13.2 Plasma Membrane Purification and Fractionation.	188
13.2.1 Plant Material	188
13.2.2 Cell Fractionation	188
13.2.3 Washing and Extraction Methods	189
13.2.4 Assessment of Purity	191
13.3 Protein Separation	193
13.3.1 Gel-Based Techniques	193
13.3.2 Non-Gel-Based Techniques	194
13.4 Protein Digestion for MS-Analysis	194
13.5 Biological Insights	195
13.5.1 Proteins Identified in the Plasma Membrane.	195
13.5.2 Studies Targeted at Plasma Membrane Proteins with Specific Properties	197
13.5.3 Differential Plasma Membrane Proteomics.	197
13.5.4 Overlap of Identified Proteins Among Studies.	198
13.5.5 Contaminating Proteins	200
13.6 Conclusions and Future Perspectives.	201
References.	202
 14. The Proteomes of Chloroplasts and other Plastids	207
<i>Paul Jarvis</i>	
14.1 Introduction	207
14.2 Proteome Catalogues	209
14.2.1 The Thylakoid Membrane System	209
14.2.2 The Envelope Membrane System	211
14.2.3 The Stroma	212
14.2.4 Plastoglobules	214
14.2.5 Whole Organelles.	214
14.3 Protein Targeting Issues	216
14.4 Comparative Proteomics	219
14.5 Multiprotein Complexes and Protein Modification	219
14.6 Concluding Remarks	220
References.	221
 15. The Plant Mitochondrial Proteome.	226
<i>A. Harvey Millar</i>	
15.1 Introduction	226
15.2 Isolation of Plant Mitochondria	227

15.3	Experimental Analysis of the Proteome and Future Plans.	230
15.4	Advances in Predicting the Remaining Proteome	234
15.5	Beyond the List of the Proteome to its Regulation and Function.	236
15.5.1	<i>Post-Translational Modifications</i>	236
15.5.2	<i>Phosphorylation</i>	236
15.5.3	<i>Oxidation</i>	238
15.6	Non-Covalent Interactions Within the Proteome.	239
15.7	Conclusion	241
	References.	241
16.	Proteomic Analysis of the Plant Nucleolus	247
	<i>Olga Koroleva, Peter McKeown, Alison Pendle, and Peter Shaw</i>	
16.1	Introduction	247
16.2	Proteomics Techniques used for Plants	249
16.3	Purification of Nucleoli	251
16.4	Isolation and Analysis of Arabidopsis Nucleolar Proteins	252
16.5	Analysis of Post-Translational Protein Modifications.	253
16.6	Quantification Techniques	255
16.6.1	<i>In Vivo Isotope Labelling: SILAC</i>	256
16.6.2	<i>In Vitro Isotope Labelling</i>	257
16.6.3	<i>Comparison of Quantification Methods</i>	258
16.7	Proteomic Analysis of Nuclear Protein Complexes.	258
16.7.1	<i>TAP Tag Strategy and Variations</i>	258
16.7.2	<i>TAP Tag Purification of Nuclear Transport Factor</i>	259
16.8	Reliability of Proteomic Data	263
16.9	Data Analysis and Databases.	263
16.10	Future Perspectives	265
	References.	266
17.	Pollen and Pollen Tube Proteomics	270
	<i>Tong Chen, Xiaoqin Wu, Yanmei Chen, Nils Böhm, Jinxing Lin, and Jozef Šamaj</i>	
17.1	Introduction	271
17.2	Procedure for Pollen Proteomic Analysis	272
17.3	Proteomics Focused on Pollen Development.	273
17.3.1	<i>Angiosperm Pollen Proteomes</i>	273
17.3.2	<i>Proteomic Analysis of Gymnosperm Pollen and Pollen Tube Development</i>	277
17.4	Conclusions and Future Perspectives.	279
	References.	281

18. Plant Proteomics Upon Fungal Attack	283
<i>Frank Colditz, Franziska Krajinski, and Karsten Niehaus</i>	
18.1 Introduction	283
18.2 Types of Plant–Fungi Interactions	285
18.2.1 Mutualistic Plant–Fungi Interactions with Microsymbionts	285
18.2.2 Parasitic Plant–Fungi Interactions – Infection Strategies of Fungal Pathogens	286
18.2.3 Model Plant/Fungi Pathosystems.	288
18.3 The “Fungal Side” – Proteomics of Fungal Pathogens	289
18.3.1 Fungal and Oomycete Effector Proteins	289
18.3.2 Pathogen-Associated Molecular Patterns	292
18.4 The “Plant Side” – Plant Proteomics Upon Fungal Attack	293
18.4.1 Inducible Defence-Related Proteins and their Occurrence in Infected Plants	294
18.4.2 Induction of Systemic Acquired Resistance by Fungal Pathogens	297
18.4.3 Mapping of Protein Phosphorylation Patterns Triggered by Fungal Pathogens or Elicitors	298
18.5 Induction of Defence-Related Proteins in Non-Pathogenic Interactions.	300
18.6 Conclusions and Future Perspectives.	300
References.	302
 19. Metabolic Intricacies of the Symbiotic Association between Soybean and <i>Bradyrhizobium japonicum</i>: A Proteomic Outlook	310
<i>Annamraju D. Sarma, Nathan W. Oehrle, and David W. Emerich</i>	
19.1 Introduction	310
19.2 Symbiotic Nitrogen Fixation	311
19.3 Mitochondrial Proteomics	313
19.4 Nodule Cytosol Proteomics	313
19.5 Symbiosome Proteomics	318
19.6 Bacteroid Proteomics.	319
19.7 An Integrated Proteomic View of the Soybean Nodule.	321
References.	322
 20. Proteomes in Arbuscular Mycorrhizal Symbiosis	326
<i>Eliane Dumas-Gaudot and Ghislaine Recorbet</i>	
20.1 Introduction	326
20.2 Trends in AM Symbiosis Towards Simultaneous “...omics” Strategies	328

20.2.1	<i>Combining Protein, Transcript and Metabolite Extractions for Investigation of AM Root/Fungus Interaction</i>	328
20.2.2	<i>Experimental Plant Design</i>	331
20.3	Proteome Profiling During AM Symbiosis	331
20.3.1	<i>Proteomics of Total Proteins</i>	334
20.3.2	<i>Sub-Cellular Proteomics</i>	335
20.4	Further Insights	337
20.5	Conclusions and Future Perspectives.	338
	References.	339
21.	Plant Proteome Responses to Abiotic Stress.	346
	<i>Delphine Vincent and Michel Zivy</i>	
21.1	Introduction	347
21.2	Water Deficit	347
21.3	Salt Stress.	351
21.4	Cold Stress.	354
21.5	Heat Stress	356
21.6	High Light	357
21.7	Metal Stress and Herbicides.	358
21.8	Conclusions	360
	References.	361
	Index	365

Plant Proteomics
