

Contents

1	Introduction	1
1.1	Purpose of the Book	1
1.2	History of Titanium	2
1.3	Emergence as Commercial Material	2
1.4	Titanium Industry Status	4
1.5	Traditional and Emerging Applications	8
1.6	Recent Developments since the First Edition – Market Dynamics	12
2	Fundamental Aspects	15
2.1	Basic Properties	15
2.2	Crystal Structure	16
2.3	Elastic Properties	16
2.4	Deformation Modes	19
	2.4.1 Slip Modes	19
	2.4.2 Deformation Twinning	22
2.5	Phase Diagrams	23
2.6	Phase Transformations	29
	2.6.1 Martensite Transformation	29
	2.6.2 Nucleation and Diffusional Growth	32
2.7	Alloy Classification	33
2.8	Basic Hardening Mechanisms	36
	2.8.1 Hardening of the Alpha Phase	37
	2.8.2 Hardening of the Beta Phase	38
2.9	Basic Physical and Chemical Properties	42
	2.9.1 Diffusion	45
	2.9.2 Corrosion Behavior	47
	2.9.3 Oxidation	50
3	Technological Aspects	53
3.1	Sponge Production	53
3.2	Melting	59
	3.2.1 Vacuum Arc Remelting (VAR)	60
	3.2.2 Cold Hearth Melting (CHM)	64
	3.2.3 Melt Related Defects	68

3.3	Primary Processing	72
3.4	Shaping into Components	79
3.4.1	Forging	79
3.4.2	Ring Rolling	83
3.4.3	Metal Removal (Machining)	85
3.5	Near Net Shape Processes	86
3.5.1	Casting	87
3.5.2	Powder Metallurgy	91
3.5.3	Laser Forming	95
3.5.4	Conventional Sheet Forming	97
3.5.5	Superplastic Forming and Diffusion Bonding	99
3.6	Conventional Joining Methods	104
3.6.1	Fusion Welding	104
3.6.2	Friction Welding	111
3.7	Surface Treatment	115
3.7.1	Shot Peening	116
3.7.2	Laser Shock Processing	120
3.7.3	Chemical Milling	123
3.7.4	Electrochemical Machining	125
3.8	Inspection Methods	125
3.8.1	Ultrasonic Inspection	126
3.8.2	Radiographic Inspection	131
3.8.3	Surface Etching Inspection	131
3.8.4	Eddy Current Inspection	134
3.8.5	Dye Penetrant Inspection	135
3.8.6	Surface Replication	136
3.9	Characterization Methods	136
3.9.1	Light Microscopy	137
3.9.2	Electron Microscopy	141
3.9.2.1	<i>Transmission Electron Microscopy</i>	141
3.9.2.2	<i>Scanning Electron Microscopy</i>	145
3.9.3	X-ray Diffraction	148
3.9.4	Mechanical Testing	149
3.10	Recent Developments since the First Edition	150
3.10.1	New Titanium Production Methods	150
3.10.2	Friction Stir Processing	153
3.10.3	Low Plasticity Burnishing	157
3.10.4	Focused Ion Beam Device Applications	161
3.10.5	Neural Networks for Structure/Property Correlations	167
4	Commercially Pure (CP) Titanium and Alpha Alloys	175
4.1	Processing and Microstructure	177
4.1.1	Material Processing	177
4.1.2	Processing into Components	183
4.2	Microstructure, Composition, and Properties	185

4.3	Properties and Applications	198
5.	Alpha + Beta Alloys	203
5.1	Processing and Microstructure	203
5.1.1	Fully Lamellar Microstructures	203
5.1.2	Bi-Modal Microstructures	208
5.1.3	Fully Equiaxed Microstructures	212
5.2	Microstructure and Mechanical Properties	216
5.2.1	Fully Lamellar Microstructures	218
5.2.2	Bi-Modal Microstructures	227
5.2.3	Fully Equiaxed Microstructures	234
5.2.4	Effect of Aging and Oxygen Content	238
5.2.5	Effect of Secondary Alpha in Beta Phase	243
5.2.6	Effect of Crystallographic Texture	246
5.3	Properties and Applications	250
6	High Temperature Alloys	259
6.1	Processing and Microstructure	260
6.2	Microstructure and Mechanical Properties	261
6.3	Properties and Applications	270
6.4	Recent Developments since the First Edition	272
6.4.1	Dwell Fatigue	272
6.4.2	Effect of Ni Impurities on Creep Strength	279
7	Beta Alloys	283
7.1	Processing and Microstructure	283
7.1.1	Beta Annealed Microstructures	284
7.1.2	Beta Processed Microstructures	290
7.1.3	Through-Transus Processed Microstructures	292
7.1.4	Bi-Modal Microstructures	295
7.2	Microstructure and Mechanical Properties	297
7.2.1	Effect of Processing Route	299
7.2.1.1	<i>Tensile Properties</i>	299
7.2.1.2	<i>Fatigue Properties</i>	302
7.2.1.3	<i>Fracture Toughness</i>	308
7.2.2	Effect of Age-Hardening	310
7.2.3	Effect of Beta Grain Size	315
7.3	Properties and Applications.	317
7.4	Recent Developments since the First Edition	323
7.4.1	Effect of Yield Stress Level on Properties of Ti-6246	323
7.4.2	Optimization of Properties of Ti-5553	330
7.4.3	Distribution of Alpha Precipitates in Beta 21S	332

8	Titanium Based Intermetallics	337
8.1	Alloying and Microstructure	338
8.2	Microstructure and Properties	348
8.2.1	Alpha 2 and Orthorhombic Alloys	349
8.2.2	Gamma Alloys	354
8.3	Applications	356
8.4	Recent Developments since the First Edition – Gamma LPT Blades	360
9	Titanium Matrix Composites	367
9.1	Processing	367
9.2	Properties	372
9.2.1	Tensile Properties	372
9.2.2	Fatigue Properties	375
9.2.3	Creep Properties	377
9.3	Applications	379
10	Special Properties and Applications of Titanium	383
10.1	Superconductivity	383
10.2	Burn Resistance	388
10.2.1	Phenomenology of Titanium Fires	389
10.2.2	Alloy Selection for Fire Risk Mitigation	390
10.3	Hydrogen Storage	391
10.4	Shape Memory Effect	393
10.4.1	Phenomenology of the Shape Memory Effect	393
10.4.2	Applications of Shape Memory Alloys	397
10.5	Biomedical Applications	399
10.6	Automotive Applications	403
10.7	Sports Related Applications	406
10.8	Appearance Related Applications	408
10.9	Recent Developments since the First Edition	410
10.9.1	Biomedical Materials	410
10.9.2	Appearance Related Problems	413
	References	417
	Index	431

Titanium

Lütjering, G.; Williams, J.C.

2007, XII, 442 p., Hardcover

ISBN: 978-3-540-71397-5
