Foreword	vii
I Dehn Functions and Non-Positive Curvature	
<i>Noel Brady</i>	1
Preface	3
1 The Isoperimetric Spectrum	5
1.1 First order Dehn functions and the isoperimetric spectrum	5
1.1.1 Definitions and history	5
1.1.2 Perron–Frobenius eigenvalues and snowflake groups	7
1.2 Topological background	9
1.2.1 Graphs of spaces and graphs of groups	10
1.2.2 The torus construction and vertex groups	11
1.3 Snowflake groups	15
1.3.1 Snowflake groups and the lower bounds	16
1.3.2 Upper bounds	22
1.4 Questions and further explorations	25
2 Dehn Functions of Subgroups of CAT(0) Groups	29
2.1 CAT(0) spaces and CAT(0) groups	31
2.1.1 Definitions and properties	31
2.1.2 M_κ -complexes, the link condition	33
2.1.3 Piecewise Euclidean cubical complexes	35
2.2 Morse theory I: recognizing free-by-cyclic groups	38
2.2.1 Morse functions and ascending/descending links	38
2.2.2 Morse function criterion for free-by-cyclic groups	42
2.3 Groups of type $(F_n \rtimes \mathbb{Z}) \times F_2$	45
2.3.1 LOG groups and LOT groups	45
2.3.2 Polynomially distorted subgroups	46
2.3.3 Examples: The double construction and the polynomial Dehn function	48
2.4 Morse theory II: topology of kernel subgroups	49
2.4.1 A non-finitely generated example: $\text{Ker}(F_2 \rightarrow \mathbb{Z})$	51
2.4.2 A non-finitely presented example: $\text{Ker}(F_2 \times F_2 \rightarrow \mathbb{Z})$	53
2.4.3 A non- F_3 example: $\text{Ker}(F_2 \times F_2 \times F_2 \rightarrow \mathbb{Z})$	56
2.4.4 Branched cover example	57

2.5	Right-angled Artin group examples	57
2.5.1	Right-angled Artin groups, cubical complexes and Morse theory	58
2.5.2	The polynomial Dehn function examples	60
2.6	A hyperbolic example	64
2.6.1	Branched covers of complexes	65
2.6.2	Branched covers and hyperbolicity in low dimensions	66
2.6.3	Branched covers in higher dimensions	70
2.6.4	The main theorem and the topological version	71
2.6.5	The main theorem: sketch	72
	Bibliography	77
 II Filling Functions		
	<i>Tim Riley</i>	81
	Notation	83
	Introduction	85
1	Filling Functions	89
1.1	Van Kampen diagrams	89
1.2	Filling functions via van Kampen diagrams	91
1.3	Example: combable groups	94
1.4	Filling functions interpreted algebraically	99
1.5	Filling functions interpreted computationally	100
1.6	Filling functions for Riemannian manifolds	105
1.7	Quasi-isometry invariance	106
2	Relationships Between Filling Functions	109
2.1	The Double Exponential Theorem	110
2.2	Filling length and duality of spanning trees in planar graphs	115
2.3	Extrinsic diameter versus intrinsic diameter	119
2.4	Free filling length	119
3	Example: Nilpotent Groups	123
3.1	The Dehn and filling length functions	123
3.2	Open questions	126
4	Asymptotic Cones	129
4.1	The definition	129
4.2	Hyperbolic groups	132
4.3	Groups with simply connected asymptotic cones	137
4.4	Higher dimensions	141
	Bibliography	145

III Diagrams and Groups*Hamish Short* **153**

Introduction 155

1 Dehn's Problems and Cayley Graphs **157****2 Van Kampen Diagrams and Pictures** **163****3 Small Cancellation Conditions** **179****4 Isoperimetric Inequalities and Quasi-Isometries** **187****5 Free Nilpotent Groups** **197****6 Hyperbolic-by-free groups** **201**

Bibliography 205
