Preface	xi
1 The Isoperimetric Problem in Euclidean Space	
1.1 Notes	8
2 The Heisenberg Group and Sub-Riemannian Geometry	
2.1 The first Heisenberg group \mathbb{H}	11
2.1.1 The horizontal distribution in \mathbb{H}	14
2.1.2 Higher-dimensional Heisenberg groups \mathbb{H}^n	15
2.1.3 Carnot groups	15
2.2 Carnot–Carathéodory distance	16
2.2.1 Constrained dynamics	16
2.2.2 Sub-Riemannian structure	19
2.2.3 Carnot groups	21
2.3 Geodesics and bubble sets	22
2.4 Riemannian approximants to the Heisenberg group	24
2.4.1 The g_L metrics	25
2.4.2 Levi-Civita connection and curvature	26
2.4.3 Gromov–Hausdorff convergence	28
2.4.4 Carnot–Carathéodory geodesics	30
2.4.5 Riemannian approximants to \mathbb{H}^n and Carnot groups	33
2.5 Notes	34
3 Applications of Heisenberg Geometry	
3.1 Jet spaces	39
3.2 Applied models	40
3.2.1 Nonholonomic path planning	42
3.2.2 Geometry of the visual cortex	43
3.3 CR structures	45

3.4	Boundary of complex hyperbolic space	48
3.4.1	Gromov hyperbolic spaces	48
3.4.2	Gromov boundary and visual metric	48
3.4.3	Complex hyperbolic space $H_{\mathbb{C}}^2$ and its boundary at infinity	50
3.4.4	The Bergman metric	51
3.4.5	Boundary at infinity of $H_{\mathbb{C}}^2$ and the Heisenberg group . . .	53
3.5	Further results: geodesics in the roto-translation space	55
3.6	Notes	58
4	Horizontal Geometry of Submanifolds	
4.1	Invariance of the Sub-Riemannian Metric with respect to Riemannian extensions	64
4.2	The second fundamental form in (\mathbb{R}^3, g_L)	65
4.3	Horizontal geometry of hypersurfaces in \mathbb{H}	69
4.3.1	Horizontal geometry in \mathbb{H}^n	72
4.3.2	Legendrian foliations	75
4.4	Analysis at the characteristic set and fine regularity of surfaces . .	77
4.4.1	The Legendrian foliation near non-isolated points of the characteristic locus	79
4.4.2	The Legendrian foliation near isolated points of the characteristic locus	84
4.5	Further results: intrinsically regular surfaces and the Rumin complex	89
4.6	Notes	91
5	Sobolev and BV Spaces	
5.1	Sobolev spaces, perimeter measure and total variation	95
5.1.1	Riemannian perimeter approximation	98
5.2	A sub-Riemannian Green's formula and the fundamental solution of the Heisenberg Laplacian	100
5.3	Embedding theorems for the Sobolev and BV spaces	101
5.3.1	The geometric case (Sobolev–Gagliardo–Nirenberg inequality)	102
5.3.2	The subcritical case	105
5.3.3	The supercritical case	106
5.3.4	Compactness of the embedding $BV \subset L^1$ on John domains	107
5.4	Further results: Sobolev embedding theorems	109
5.5	Notes	112

6 Geometric Measure Theory and Geometric Function Theory

6.1	Area and co-area formulas	117
6.2	Pansu–Rademacher theorem	123
6.3	Equivalence of perimeter and Minkowski content	126
6.4	First variation of the perimeter	127
6.4.1	Parametric surfaces and noncharacteristic variations	128
6.4.2	General variations	133
6.5	Mostow’s rigidity theorem for $H_{\mathbb{C}}^2$	135
6.5.1	Quasiconformal mappings on \mathbb{H}	139
6.6	Notes	140

7 The Isoperimetric Inequality in \mathbb{H}

7.1	Equivalence of the isoperimetric and geometric Sobolev inequalities	143
7.2	Isoperimetric inequalities in Hadamard manifolds	144
7.3	Pansu’s proof of the isoperimetric inequality in \mathbb{H}	147
7.4	Notes	150

8 The Isoperimetric Profile of \mathbb{H}

8.1	Pansu’s conjecture	151
8.2	Existence of minimizers	154
8.3	Isoperimetric profile has constant mean curvature	157
8.3.1	Parametrization of C^2 CMC t-graphs in \mathbb{H}	159
8.4	Minimizers with symmetries	162
8.5	The C^2 isoperimetric profile in \mathbb{H}	168
8.6	The convex isoperimetric profile of \mathbb{H}	172
8.7	Other approaches	176
8.7.1	Riemannian approximation approach	176
8.7.2	Failure of the Brunn–Minkowski approach to isoperimetry in \mathbb{H}	180
8.7.3	Horizontal mean curvature flow	181
8.8	Further results	183
8.8.1	The isoperimetric problem in the Grushin plane	183
8.8.2	The classification of symmetric CMC surfaces in \mathbb{H}^n	185
8.9	Notes	186

9 Best Constants for Other Geometric Inequalities on the Heisenberg Group

9.1	L^2 -Sobolev embedding theorem	191
9.2	Moser–Trudinger inequality	195
9.3	Hardy inequality	199
9.4	Notes	200
Bibliography		203
Index		219

List of Figures

1.1	Dido, Queen of Carthage. Engraving by <i>Mathäus Merian the Elder</i> , 1630	1
1.2	Isoperimetric sets in \mathbb{R}^2 have symmetry.	6
1.3	Isoperimetric sets are convex	6
2.1	Examples of horizontal planes at different points.	14
2.2	Horizontal paths connecting points in \mathbb{H}	17
2.3	The conjectured isoperimetric set in \mathbb{H}^1	24
3.1	Coordinates describing the unicycle.	43
3.2	The hypercolumn structure of $V1$	44
7.1	Illustration of Pansu’s approach.	145

An Introduction to the Heisenberg Group and the
Sub-Riemannian Isoperimetric Problem

Capogna, L.; Danielli, D.; Pauls, S.D.; Tyson, J.

2007, XVI, 224 p., Hardcover

ISBN: 978-3-7643-8132-5

A product of Birkhäuser Basel
