Preface	ix
1 The elementary algebra of K-theory	1
1.1 Projective modules, idempotents, and vector bundles	2
1.1.1 General properties	4
1.1.2 Similarity of idempotents	5
1.1.3 Relationship to vector bundles	5
1.2 Passage to K-theory	8
1.2.1 Euler characteristics of finite projective complexes	9
1.2.2 Definition of K_0 for non-unital rings	10
1.3 Exactness properties of K-theory	12
1.3.1 Half-exactness of K_0	12
1.3.2 Invertible elements and the index map	13
1.3.3 Nilpotent extensions and local rings	15
2 Functional calculus and topological K-theory	19
2.1 Bornological analysis	19
2.1.1 Spaces of continuous maps	22
2.1.2 Bornological tensor products	23
2.1.3 Local Banach algebras and functional calculus	24
2.2 Homotopy invariance and exact sequences for local Banach algebras	27
2.2.1 Homotopy invariance of K-theory	28
2.2.2 Higher K-theory	30
2.2.3 The Puppe exact sequence	31
2.2.4 The Mayer–Vietoris sequence	32
2.2.5 Projections and idempotents in C^* -algebras	34
2.3 Invariance of K-theory for isoradial subalgebras	36
2.3.1 Isoradial homomorphisms	36
2.3.2 Nearly idempotent elements	38
2.3.3 The invariance results	39
2.3.4 Continuity and stability	41

3	Homotopy invariance of stabilised algebraic K-theory	45
3.1	Ingredients in the proof	46
3.1.1	Split-exact functors and quasi-homomorphisms	46
3.1.2	Inner automorphisms and stability	49
3.1.3	A convenient stabilisation	51
3.1.4	Hölder continuity	53
3.2	The homotopy invariance result	54
3.2.1	A key lemma	54
3.2.2	The main results	57
3.2.3	Weak versus full stability	60
4	Bott periodicity	63
4.1	Toeplitz algebras	63
4.2	The proof of Bott periodicity	65
4.3	Some K-theory computations	69
4.3.1	The Atiyah–Hirzebruch spectral sequence	72
5	The K-theory of crossed products	75
5.1	Crossed products for a single automorphism	75
5.1.1	Crossed Toeplitz algebras	77
5.2	The Pimsner–Voiculescu exact sequence	79
5.2.1	Some consequences of the Pimsner–Voiculescu Theorem	83
5.3	A glimpse of the Baum–Connes conjecture	83
5.3.1	Toeplitz cones	88
5.3.2	Proof of the decomposition theorem	89
6	Towards bivariant K-theory: how to classify extensions	91
6.1	Some tricks with smooth homotopies	91
6.2	Tensor algebras and classifying maps for extensions	94
6.3	The suspension-stable homotopy category	99
6.3.1	Behaviour for infinite direct sums	105
6.3.2	An alternative approach	106
6.4	Exact triangles in the suspension-stable homotopy category	108
6.5	Long exact sequences in triangulated categories	113
6.6	Long exact sequences in the suspension-stable homotopy category	116
6.7	The universal property of the suspension-stable homotopy category	119
7	Bivariant K-theory for bornological algebras	123
7.1	Some tricks with stabilisations	124
7.1.1	Comparing stabilisations	124
7.1.2	A general class of stabilisations	125
7.1.3	Smooth stabilisations everywhere	128
7.2	Definition and basic properties	129
7.3	Bott periodicity and related results	132

7.4	K-theory versus bivariant K-theory	135
7.4.1	Comparison with other topological K-theories	137
7.5	The Weyl algebra	139
8	A survey of bivariant K-theories	141
8.1	K-Theory with coefficients	143
8.2	Algebraic dual K-theory	146
8.3	Homotopy-theoretic KK-theory	148
8.4	Brown–Douglas–Fillmore extension theory	149
8.5	Bivariant K-theories for C^* -algebras	152
8.5.1	Adapting our machinery	152
8.5.2	Another variant related to E-theory	156
8.5.3	Comparison with Kasparov’s definition	157
8.5.4	Some remarks on the Kasparov product	164
8.6	Equivariant bivariant K-theories	171
9	Algebras of continuous trace, twisted K-theory	173
9.1	Algebras of continuous trace	173
9.2	Twisted K-theory	182
10	Crossed products by \mathbb{R} and Connes’ Thom Isomorphism	185
10.1	Crossed products and Takai Duality	185
10.2	Connes’ Thom Isomorphism Theorem	189
10.2.1	Connes’ original proof	189
10.2.2	Another proof	191
11	Applications to physics	195
11.1	K-theory in physics	195
11.2	T-duality	197
12	Some connections with index theory	203
12.1	Pseudo-differential operators	204
12.1.1	Definition of pseudo-differential operators	204
12.1.2	Index problems from pseudo-differential operators	207
12.1.3	The Dolbeault operator	208
12.2	The index theorem of Baum, Douglas, and Taylor	210
12.2.1	Toeplitz operators	210
12.2.2	A formula for the boundary map	212
12.2.3	Application to the Dolbeault operator	215
12.3	The index theorems of Kasparov and Atiyah–Singer	216
12.3.1	The Thom isomorphism and the Dolbeault operator	220
12.3.2	The Dolbeault element and the topological index map	222

13 Localisation of triangulated categories	225
13.1 Examples of localisations	229
13.1.1 The Universal Coefficient Theorem	230
13.1.2 The Baum–Connes assembly map via localisation	233
13.2 The Octahedral Axiom	234
Bibliography	241
Notation and Symbols	249
Index	257

Topological and Bivariant K-Theory

Cuntz, J.; Rosenberg, J.M.

2007, XII, 262 p., Softcover

ISBN: 978-3-7643-8398-5

A product of Birkhäuser Basel
