Foreword	xi
V. PASQUIER	
<i>Quantum Hall Effect and Non-commutative Geometry</i>	
1 Introduction	1
2 Lowest Landau level physics	3
2.1. Single particle in a magnetic field	3
2.2. Non-commutative product	5
3 Interactions	7
3.1. Spring in a magnetic field	7
3.2. Structure of the bound state	8
3.3. Bosons at $\nu = 1$	9
4 Skyrmion and nonlinear σ -model	12
4.1. Non-commutative Belavin–Polyakov soliton	13
References	16
V. RIVASSEAU	
<i>Non-commutative Renormalization</i>	
1 Introduction	19
2 Commutative renormalization, a blitz review	34
2.1. Functional integral	34
2.2. Feynman rules	38
2.3. Scale analysis and renormalization	42
2.4. The BPHZ theorem	45
2.5. The Landau ghost and asymptotic freedom	47
3 Non-commutative field theory	49
3.1. Field theory on Moyal space	49
3.1.1. The Moyal space \mathbb{R}_θ^D	49
3.1.2. The Φ^{*4} theory on \mathbb{R}_θ^4 Moyal space	52
3.1.3. UV/IR mixing	53
3.2. The Grosse-Wulkenhaar breakthrough	54
3.3. The non-commutative Gross-Neveu model	56
4 Multi-scale analysis in the matrix basis	58

4.1. A dynamical matrix model	58
4.1.1. From the direct space to the matrix basis	58
4.1.2. Topology of ribbon graphs	59
4.2. Multi-scale analysis	60
4.2.1. Bounds on the propagator	60
4.2.2. Power counting	62
5 Hunting the Landau ghost	64
5.1. One loop	64
5.2. Two and three loops	66
5.3. The general Ward identity	68
5.3.1. Proof of Theorem 5.1	71
5.3.2. Bare identity	76
5.4. The RG flow	76
6 Propagators on non-commutative space	77
6.1. Bosonic kernel	78
6.2. Fermionic kernel	78
6.3. Bounds	80
6.4. Propagators and renormalizability	81
7 Direct space	82
7.1. Short and long variables	82
7.2. Routing, Filk moves	83
7.2.1. Oriented graphs	83
7.2.2. Position routing	83
7.2.3. Filk moves and rosettes	85
7.2.4. Rosette factor	85
7.3. Renormalization	87
7.3.1. Four-point function	87
7.3.2. Two-point function	88
7.3.3. The Langmann-Szabo-Zarembo model	88
7.3.4. Covariant models	88
8 Parametric representation	91
8.1. Ordinary Symanzik polynomials	91
8.2. Non-commutative hyperbolic polynomials, the non-covariant case	95
8.3. Non-commutative hyperbolic polynomials, the covariant case	99
9 Conclusion	100
References	102

A.P. POLYCHRONAKOS

Non-commutative Fluids

1	Introduction.....	109
2	Review of non-commutative spaces.....	110
2.1.	The operator formulation.....	110
2.2.	Weyl maps, Wigner functions and *-products.....	113
3	Non-commutative gauge theory.....	114
3.1.	Background-independent formulation.....	115
3.2.	Superselection of the non-commutative vacuum.....	116
3.3.	Non-commutative Chern-Simons action.....	117
3.4.	Level quantization for the non-commutative Chern-Simons action.....	121
4	Connection with fluid mechanics.....	122
4.1.	Lagrange and Euler descriptions of fluids.....	122
4.2.	Reparametrization symmetry and its non-commutative avatar.....	124
4.3.	Gauging the symmetry.....	125
4.4.	Non-commutative fluids and the Seiberg-Witten map.....	126
5	The non-commutative description of quantum Hall states.....	130
5.1.	Non-commutative Chern-Simons description of the quantum Hall fluid.....	130
5.2.	Quasiparticle and quasihole classical states.....	132
5.3.	Finite number of electrons: the Chern-Simons matrix model.....	133
5.4.	Quantum Hall ‘droplet’ vacuum.....	134
5.5.	Excited states of the model.....	135
5.6.	Equivalence to the Calogero model.....	137
6	The quantum matrix Chern-Simons model.....	138
6.1.	Quantization of the filling fraction.....	138
6.2.	Quantum states.....	141
6.3.	Final remarks on the matrix model.....	143
7	The non-commutative Euler picture and bosonization.....	144
7.1.	Density description of fermionic many-body systems.....	144
7.2.	The correspondence to a non-commutative fluid.....	146
7.3.	Quantization and the full many-body correspondence.....	147
7.4.	Higher-dimensional non-commutative bosonization.....	148
8	$\tau\acute{\alpha}\ \pi\acute{\alpha}\nu\tau\alpha\ \rho\epsilon\acute{\iota}\ \dots$ (and it all keeps flowing...).....	155
	References.....	155

J.-M. MAILLET

*Heisenberg Spin Chains: From Quantum Groups to
Neutron Scattering Experiments*

1	Introduction.....	161
2	Heisenberg spin chain and algebraic Bethe ansatz.....	170
2.1.	Algebraic Bethe ansatz.....	170
2.2.	Description of the spectrum.....	172
2.3.	Drinfel'd twist and F-basis.....	173
2.4.	Solution of the quantum inverse problem.....	175
2.5.	Scalar products.....	176
2.6.	Action of operators A, B, C, D on a general state.....	177
3	Correlation functions: Finite chain.....	178
3.1.	Matrix elements of local operators.....	178
3.2.	Elementary blocks of correlation functions.....	179
3.3.	Two-point functions.....	181
3.4.	Towards the comparison with neutron scattering experiments.....	183
4	Correlation functions: Infinite chain.....	186
4.1.	The thermodynamic limit.....	187
4.2.	Elementary blocks.....	189
5	Exact and asymptotic results.....	190
5.1.	Exact results at $\Delta = 1/2$	190
5.1.1.	The emptiness formation probability.....	190
5.1.2.	The two-point function of σ^z	191
5.2.	Asymptotic results.....	192
5.3.	Asymptotic behavior of the two-point functions.....	194
6	Conclusion and perspectives.....	195
	Acknowledgments.....	196
	References.....	196

Non-commutative Geometry and the Spectral Model of Space-time

1	Background.....	203
2	Why non-commutative spaces.....	205
3	What is a non-commutative geometry?.....	206
4	Inner fluctuations of a spectral geometry.....	208
5	The spectral action principle.....	209
6	The finite non-commutative geometry F	212
6.1.	The representation of \mathcal{A}_F in \mathcal{H}_F	212
6.2.	The unimodular unitary group $SU(\mathcal{A}_F)$	213
6.3.	The classification of Dirac operators.....	214

7	The spectral action for $M \times F$ and the standard model	215
8	Detailed form of the bosonic action	216
9	Detailed form of the spectral action without gravity	218
10	Predictions	220
10.1.	Unification of couplings	220
10.2.	See-saw mechanism for neutrino masses	220
10.3.	Mass relation $Y_2(S) = 4g^2$	222
10.4.	The Higgs scattering parameter	223
10.5.	Naturalness	223
10.6.	Gravitational terms	224
11	Final remarks	225
	References	226

Quantum Spaces

Poincaré Seminar 2007

Rivasseau, V. (Ed.)

2007, XII, 228 p., Hardcover

ISBN: 978-3-7643-8521-7
