

# Preface

*Principles of Cancer Reconstructive Surgery* is a reference text for medical and surgical oncologists, radiation oncologists, family practice physicians and dermatologists, providing an overview of reconstructive procedures. Interested residents, medical students, and health care professionals will find this an important resource designed to educate those involved with the management of cancer patients.

The disease-specific format facilitates quick reference for focusing on a single body area or disease. The most commonly occurring cancers, breast, melanoma, and head and neck, are covered in an overview chapter and in greater detail individually, with 300 color illustrations in a format that provides excellent detail and clarity.

*Charles E. Butler, MD, FACS*  
*Neil A. Fine, MD, FACS*
