

Contents

Preface	vii
Section I: Introduction to Cryopreservation	1
1. Cryopreservation—Practical Considerations	3
<i>Barbara M. Reed</i>	
1.1 Introduction	3
1.2 Planning for a Liquid Nitrogen Stored Collection.....	4
1.2.1 Plant Materials	4
1.2.2 Storage Records	5
1.2.3 Storage Form.....	7
1.2.4 How Many to Store.....	7
1.2.5 Protocol Testing.....	8
1.2.6 Storage Controls	9
1.2.7 Recovery	9
1.3 Standard Protocols	10
1.4 Conclusions	11
References	11
2. Cryopreservation Theory	15
<i>Erica E. Benson</i>	
2.1 Introduction	15
2.2 The Biological Chemistry of Water	15
2.3 Thermal Properties of Water and Ice	17
2.3.1 Ice Nucleation.....	17
2.3.2 Controlled Rate Cooling.....	20
2.4 Vitrification: The Glassy State	21
2.5 Water State Transitions and Instabilities	22
2.6 Cryoprotection	23
2.6.1 Biophysical Aspects of Natural Freezing Tolerance.....	23
2.6.2 Aspects of Natural Freeze Tolerance	24
2.6.3 Artificial Cryoprotection	25
2.7 New and Retrospective Insights in Cryoprotection	27
References	30

3. Development of PVS-Based Vitrification and Encapsulation-Vitrification Protocols.....	33
<i>Akira Sakai, Dai Hirai and Takao Niino</i>	
3.1 Introduction.....	33
3.2 The Concept of Vitrification.....	34
3.3 Vitrification Procedure	35
3.4 Preconditioning.....	38
3.5 Preculture	41
3.5.1 Herbaceous Plants.....	41
3.5.2 Woody Plants.....	41
3.5.3 Tropical Plants	43
3.6 Osmoprotection (Loading Treatment).....	43
3.7 Exposure Time to PVS2	44
3.8 Regrowth.....	46
3.9 Encapsulation Vitrification.....	47
3.10 A Personal View of the Development of PVS2 by Akira Sakai	48
3.10.1 The Ultimate Goal—Storing Tropical Plants	48
3.10.2 The Core of the Technology Development.....	48
3.10.3 Success with Vitrification of Tropical Plants	50
3.10.4 Fifteen Years of Research.....	50
References.....	51
4. Development of Encapsulation Dehydration.....	59
<i>Florent Engelmann, Maria-Teresa Gonzalez Arnao, Yongjie Wu and Roosevelt Escobar</i>	
4.1 Introduction	59
4.2 Successive Steps of the Protocol	62
4.2.1 Physiological Status of the Plant Material.....	62
4.2.2 Preconditioning.....	63
4.2.3 Preculture.....	63
4.2.4 Encapsulation.....	64
4.2.5 Osmoprotection	64
4.2.6 Dehydration	65
4.2.7 Cryopreservation	65
4.2.8 Rewarming.....	66
4.2.9 Recovery.....	66
4.2.10 Viability Assessment.....	67
4.3 Current Development and use of Encapsulation Dehydration	67
4.4 Genetic Stability	68
4.5 Conclusions	68
References.....	68
5. Controlled Rate Cooling.....	77
<i>Barbara M. Reed and Esther Uchendu</i>	
5.1 Basic concepts of controlled rate cooling.....	77
5.2 Preconditioning.....	78

5.2.1 Cold Acclimation	78
5.2.2 <i>In Vitro</i> Culture	80
5.2.3 Absciscic Acid	80
5.3 Preculture	82
5.4 Cryoprotection	83
5.4.1 Single Chemicals	83
5.4.2 Chemical Combinations	84
5.5 Cooling	84
5.6 Warming	85
5.7 Recovery and Viability Assessment	86
5.8 Summary of the Basic Protocol	87
References	88
 Section II. Cryopreservation Protocols for Working Laboratories	93
 6. Cryopreservation of Algae.....	95
<i>John G. Day and Keith Harding</i>	
6.1 Algae	95
6.2 Physiological Status	96
6.3 Preconditioning	96
6.4 Preculture	97
6.5 Cryoprotection	98
6.6 Cryopreservation	99
6.6.1 Rewarming	100
6.6.2 Recovery	100
6.6.3 Viability Assessment	101
References	102
6.7 Protocols.....	104
6.7.1 Passive Cooling Two-Step Methods	104
6.7.2 Controlled Rate Cooling Protocols	108
6.7.3 Encapsulation Dehydration Method	112
6.7.4 Viability Assessments used for Microalgae and Cyanobacteria	114
 7. Cryopreservation of Bryophytes and Ferns	117
<i>Valerie C. Pence</i>	
7.1 Introduction.....	117
7.2 Bryophyte Gametophytes.....	118
7.3 Fern Gametophytes	120
7.4 Fern Spores	121
7.5 Fern Sporophytes and Fern Allies.....	122
7.6 The Future	122
References	124
7.7 Protocols.....	126
7.7.1 Bryophyte Gametophyte Cryopreservation—Mr. Frosty	126
7.7.2 Cryopreservation of Bryophyte Gametophytes— Three Drying Protocols	128

7.7.3 Encapsulation Dehydration of Bryophyte Gametophytes.....	131
7.7.4 Controlled Rate Cooling of Moss Protonemata	134
7.7.5 Encapsulation Dehydration of Fern Gametophytes	136
7.7.6 Cryopreservation of Fern Spores 1	139
7.7.7 Cryopreservation of Fern Spores 2.....	140
8. Cryopreservation of Dedifferentiated Cell Cultures	141
<i>Elke Heine-Dobbernack, Heiko Kiesecker and Heinz Martin Schumacher</i>	
8.1 The Use of Dedifferentiated Plant Cell Cultures.....	141
8.2 The Need for Cryopreservation	143
8.3 Culture Stability.....	144
8.4 Cryopreservation.....	146
8.5 Cultivation Aspects.....	147
8.6 Controlled Rate Cooling.....	149
8.6.1 Minitest Method for Evaluation of Parameters for Controlled Rate Cooling.....	151
8.6.2 Determination of Cell Viability	155
8.7 Vitrification.....	156
8.8 Encapsulation Dehydration.....	157
8.9 Viability Testing	159
8.9.1 Tetrazolium (TTC) Test.....	159
8.9.2 Fluorescein Diacetate (FDA) Test.....	160
8.9.3 Evans Blue Test	161
References.....	161
8.10 Protocols	166
8.10.1 Controlled Rate Cooling: Simple.....	166
8.10.2 Controlled Rate Cooling: Preculture	168
8.10.3 PVS2 Vitrification Procedure 1	170
8.10.4 PVS2 Vitrification Procedure 2	172
8.10.5 Encapsulation Dehydration: Laminar Flow.....	173
8.10.6 Encapsulation Dehydration: Silica Gel.....	175
9. Cryopreservation of Embryogenic Cultures	177
<i>Maurizio Lambardi, E. Aylin Ozudogru and Carla Benelli</i>	
9.1 Introduction.....	177
9.1.1 Controlled Rate Cooling.....	179
9.1.2 Direct Immersion in Liquid Nitrogen.....	183
9.2 Application of Cryopreservation to Embryogenic Cultures.....	183
9.2.1 Developmental Stage.....	184
9.2.2 Preconditioning of Embryogenic Callus	185
9.2.3 Preculture	185
9.2.4 Cryoprotectants.....	186
9.2.5 Cooling Rates.....	186
9.2.6 Warming and Rinsing.....	187
9.3 Genetic Stability	187
References.....	188

9.4. Protocols.....	195
9.4.1 Controlled Rate Cooling of <i>Pinus pinaster</i> Embryogenic Cultures.....	195
9.4.2 Vitrification of Embryogenic Cultures of <i>Picea mariana</i>	197
9.4.3 Controlled Rate Cooling of Embryogenic Callus of <i>Citrus</i> ssp.....	198
9.4.4 Encapsulation Dehydration of Citrus Somatic Embryos	199
9.4.5 Controlled Rate Cooling of Banana Embryogenic Cultures	201
9.4.6 Vitrification of <i>Aesculus hippocastanum</i> Embryogenic Callus	202
9.4.7 Cryopreservation of Embryogenic Callus of <i>Prunus avium</i> by Dehydration	203
9.4.8 Vitrification of Embryogenic Cultures of Chestnut, Common Oak and Cork Oak.....	205
9.4.9 Controlled Rate Cooling of <i>Cyclamen persicum</i> Suspension Cultures	207
9.4.10 Encapsulation Dehydration and Controlled Cooling of Embryogenic Callus of <i>Ipomoea batatas</i>	209
9.4.11 Controlled Cooling of Embryogenic Callus of <i>Saccharum officinarum</i>	210
10. Cryopreservation of Excised Embryos and Embryonic Axes.....	211
<i>M.N. Normah and A.M. Makeen</i>	
10.1 Introduction	211
10.2 Desiccation Rate	213
10.3 Physiological Status	213
10.4 Cryopreservation	214
10.4.1 Preculture and Cryoprotectant Treatment.....	214
10.4.2 Cooling and Warming Rate	215
10.4.3 Recovery	216
10.4.4 Viability Assessment	216
10.5 Summary.....	216
References	217
10.6 Protocols.....	221
10.6.1 Almond (<i>Prunus amygdalus</i>) Air Desiccation Cryopreservation.....	221
10.6.2 Cryopreservation of <i>Arachis</i> (<i>A. hypogaea</i> and Wild Relatives)	222
10.6.3 Air-Desiccation Cryopreservation of Embryos of Chayote (<i>Sechium edule</i>).....	224
10.6.4 Vitrification of Embryonic Axes of <i>Citrus macroptera</i>	225
10.6.5 Cryopreservation of Embryonic Axes of <i>Citrus suhuiensis</i> cv. Limau langkat through Desiccation	226
10.6.6 Cryopreservation of Coffee (<i>Coffea liberica</i>) Embryos through Air Desiccation.....	230
10.6.7 Cryopreservation of Embryonic Axes of Hazelnut (<i>Corylus avellana</i>) by Air and Silica Gel Desiccation	231

10.6.8 Air-Desiccation Cryopreservation of Embryonic Axes of Neem (<i>Azadirachta indica</i>)	234
10.6.9 Desiccation Cryopreservation of Isolated Embryos of Olive (<i>Olea europaea</i>)	235
10.6.10 Desiccation Cryopreservation of Embryonic Axes of Rubber (<i>Hevea brasiliensis</i>).....	236
10.6.11 Flash Drying Tea Zygotic Embryos (<i>Camellia sinensis</i>).....	237
10.6.12 Desiccation of Zygotic Embryo Axes of Chestnut (<i>Castanea</i>)	239
11. Cryopreservation of Monocots.....	241
<i>Bart Panis</i>	
11.1 Introduction	241
11.2 Plant Culture	242
11.2.1 Starting material	242
11.2.2 Preconditioning and Preculture	243
11.3 Cryoprotection and Cryopreservation	244
11.3.1 Controlled Rate Cooling.....	245
11.3.2 Sucrose Preculture	245
11.3.3 Encapsulation Dehydration	245
11.3.4 Desiccation	245
11.3.5 Encapsulation Vitrification	246
11.3.6 Vitrification	246
11.3.7 DMSO Droplet Freezing.....	246
11.4 Rewarming	247
11.5 Recovery and Viability Assessment.....	247
References	247
11.6 Protocols.....	252
11.6.1 Dehydration of <i>Asparagus</i> Axillary Buds	252
11.6.2 Droplet Freezing of <i>Asparagus</i> Shoot Tips.....	253
11.6.3 Controlled Rate Cooling of <i>Asparagus</i> Meristems	255
11.6.4 Cryopreservation of Orchid Shoot Primordia	256
11.6.5 Vitrification of <i>Cymbidium</i> Apical Meristems.....	258
11.6.6 Cryopreservation of Banana Meristem Clumps.....	260
11.6.7 Droplet Vitrification of Banana Apical Meristems.....	263
11.6.8 Encapsulation Dehydration of Sugarcane Apices	266
11.6.9 PVS3 Vitrification of <i>In Vitro</i> Garlic Meristems	268
11.6.10 Vitrification of Pineapple (<i>Ananas comosus</i>) Meristems.....	271
11.6.11 Droplet Vitrification of Taro (<i>Colocasia esculenta</i>)	273
11.6.12 Encapsulation Vitrification of Lily Shoot Tips	276
11.6.13 Encapsulation Dehydration of Grasses (<i>Cynodon</i> , <i>Zoysia</i> , <i>Lolium</i>)	278
12. Cryopreservation of Herbaceous Dicots	281
<i>E.R. Joachim Keller, Angelika Senula and Anja Kaczmarczyk</i>	
12.1 Introduction	281

12.2 Cryopreservation Techniques for Herbaceous Dicots.....	282
12.2.1 Root and Tuber Crops.....	282
12.2.2 Seed-Propagated Crops.....	282
12.2.3 Medicinal and Aromatic Crops	283
12.2.4 Ornamental Plants.....	284
12.2.5 Endangered Species.....	285
12.3 Cryopreservation	285
12.3.1 Plant Factors	285
12.3.2 Preconditioning.....	289
12.3.3 Preculture.....	289
12.3.4 Osmoprotection	289
12.4 Cryoprotection and Cryopreservation	291
12.4.1 Controlled Rate Cooling	291
12.4.2 Vitrification	291
12.4.3 DMSO Droplet Method	292
12.4.4 Encapsulation Dehydration	292
12.5 Rewarming.....	292
12.6 Recovery	293
12.7 Viability Assessment	293
References	294
12.8 Protocols	302
12.8.1 Vitrification of Potato Shoot Tips	302
12.8.2 Encapsulation Dehydration of Potato Shoot Tips	304
12.8.3 DMSO Droplet Method for Potato Shoot Tips	306
12.8.4 Droplet Vitrification of Potato Shoot Tips	309
12.8.5 <i>Gentiana</i> Encapsulation Vitrification.....	311
12.8.6 Controlled Rate Cooling of <i>Hypericum perforatum</i> L.	313
12.8.7 Encapsulation Vitrification of Sweet Potato (<i>Ipomoea</i>)	315
12.8.8 Vitrification for <i>Limonium</i> Shoot Tips.....	318
12.8.9 Encapsulation Vitrification of Mint Shoot Tips	320
12.8.10 Vitrification of Innala (<i>Solenostemon rotundifolius</i>)	323
12.8.11 Vitrification for Wasabi (<i>Eutrema wasabi</i>) Shoot Tips	325
12.8.12 <i>Pelargonium</i> Encapsulation Dehydration	327
12.8.13 Encapsulation Dehydration of Hop Shoot Tips.....	329
12.8.14 Controlled Rate Cooling of <i>Humulus</i> and <i>Mentha</i>	331
13. Cryopreservation of Temperate Berry Crops	333
Barbara M. Reed	
13.1 Introduction	333
13.2 Cryopreservation Techniques	333
13.3 Cryopreservation	334
13.3.1 <i>Actinidia</i>	334
13.3.2 <i>Fragaria</i>	335
13.3.3 <i>Ribes</i>	336
13.3.4 <i>Rubus</i>	338
13.3.5 <i>Vaccinium</i>	340

13.3.6	<i>Vitis</i>	340
13.4	Conclusions	342
	References	343
13.5	Protocols	347
13.5.1	Encapsulation Dehydration of Kiwifruit (<i>Actinidia</i>).....	347
13.5.2	Vitrification of Strawberry (<i>Fragaria</i>) Shoot Tips.....	349
13.5.3	Strawberry (<i>Fragaria</i>) and <i>Rubus</i> Controlled Rate Cooling.....	351
13.5.4	Controlled Rate Cooling of Strawberry	354
13.5.5	Encapsulation Dehydration of <i>Ribes</i>	356
13.5.6	Encapsulation Dehydration and Encapsulation Vitrification of Raspberry (<i>Rubus idaeus</i>)	359
13.5.7	Encapsulation Dehydration of Grapevine (<i>Vitis</i>)	362
13.5.8	Vitrification of Grape (<i>Vitis</i>) Shoot Tips.....	364
14.	Cryopreservation of <i>In Vitro</i> Tissues of Deciduous Forest Trees.....	365
	<i>Hely Häggman, Mari Rusanen and Soile Jokipii</i>	
14.1	Global Forest Resources.....	365
14.2	Characteristics of Forest Trees	366
14.3	Conservation Strategies for Forest Tree Resources	366
14.3.1	General Conservation Principles of Forest Trees.....	366
14.3.2	Why Cryopreserve Forest Tree Germplasm?.....	368
14.4	Cryopreservation Protocols	368
14.4.1	Controlled Rate Cooling.....	369
14.4.2	Vitrification	369
14.4.3	Encapsulation Dehydration	370
14.5	Long-term Storage and Genetic Fidelity	371
14.6	Conclusions	373
	References	373
14.7	Protocols	377
14.7.1	Vitrification of <i>Populus alba</i> Shoot Tips	377
14.7.2	Controlled Rate Cooling of <i>In Vitro</i> Meristems of Silver Birch	379
14.7.3	Vitrification of Axillary Buds of Silver Birch	382
14.7.4	Vitrification of <i>Robinia pseudoacacia</i>	385
14.7.5	Encapsulation Dehydration of <i>Robinia pseudoacacia</i>	386
15.	Cryopreservation of Fruit and Ornamental Trees	387
	<i>Yanhua Zhao, Yongjie Wu, Yongjian Chang and Barbara M. Reed</i>	
15.1	Introduction	387
15.2	Plant Considerations	388
15.2.1	Plant Material	388
15.2.2	Preconditioning	388
15.2.3	Preculture.....	392
15.3	Cryopreservation	392
15.3.1	Controlled Rate Cooling.....	393
15.3.2	Encapsulation Dehydration	393

15.3.3 Vitrification	394
15.3.4 Encapsulation Vitrification.....	395
15.3.5 Vitrification and Controlled Rate Cooling	396
15.4 Rewarming of Samples.....	396
15.5 Recovery and Regrowth	397
15.6 Viability Assessment	397
15.7 Conclusions.....	398
References.....	398
15.8 Protocols	403
15.8.1 PVS3 Vitrification of Apple Shoot Tips	403
15.8.2 Controlled Rate Cooling of <i>In Vitro</i> <i>Pyrus</i> Shoot Tips	404
15.8.3 Controlled Rate Cooling of <i>Prunus</i> Shoot Tips in Modified PVS2	406
15.8.4 Vitrification of <i>Prunus</i> Shoot Tips on Foil Strips	408
15.8.5 Vitrification of <i>Prunus domestica</i> Shoot Tips.....	410
15.8.6 Vitrification of Chestnut (<i>Castanea sativa</i>) Shoot Tips.....	412
15.8.7 Vitrification of Papaya (<i>Carica papaya</i>) Shoot Tips	414
15.8.8 Dehydration of Olive Shoot Tips	417
15.8.9 Encapsulation Dehydration of Azalea (<i>Rhododendron</i>)	419
16. Cryopreservation of Dormant Buds	421
<i>L.E. Towill and D.D. Ellis</i>	
16.1 General Status and Important Factors	421
16.2 General Methodology	422
16.3 Critical Factors for Successful Cryopreservation.....	423
References.....	424
16.4 Protocols	427
16.4.1 Cryopreservation of Apple (<i>Malus domestica</i>) Dormant Buds	427
16.4.2 Cryopreservation of Pear and Mulberry Dormant Buds	430
16.4.3 Controlled Rate Cooling of Silver Birch and Aspen Dormant Buds	432
16.4.4 Cryopreservation of Willow (<i>Salix</i>) Dormant Buds.....	436
16.4.5 Vitrification of Persimmon (<i>Diospyros</i>) Dormant Buds	438
16.4.6 Cryopreservation of Dormant Garlic Bulbs	440
17. Cryopreservation of Pollen.....	443
<i>S. Ganeshan, P.E. Rajasekharan, S. Shashikumar and William Decruze</i>	
17.1 Introduction.....	443
17.2 Physiological Status.....	444
17.3 Protocols for Cryopreservation.....	444
17.3.1 Rewarming	444
17.3.2 Viability Assessment	445
17.3.3 Theoretical and Practical Considerations	445
References.....	445
17.4 Protocols	448

17.4.1 Cryopreservation of Mango Pollen (<i>Mangifera indica</i>).....	448
17.4.2 Cryopreservation of Papaya Pollen (<i>Carica papaya</i> and <i>Carica cauliflora</i>)	449
17.4.3 Cryopreservation Citrus Pollen (<i>Citrus limon</i>)	450
17.4.4 Cryopreservation of Grape Pollen (<i>Vitis vinifera</i> , and <i>Vitis labrusca</i>).....	452
17.4.5 Cryopreservation of <i>Gladiolus</i> Pollen.....	453
17.4.6 Cryopreservation of Rose Pollen.....	454
17.4.7 Cryopreservation of Asclepiadaceae Pollinia – General procedures	455
17.4.8 Cryopreservation of Tropical Orchids.....	457
17.4.9 Cryopreservation of Solanaceus Species.....	463
17.4.10 Cryopreservation of <i>Allium cepa</i> Pollen	464
18. Cryopreservation of Recalcitrant (i.e. Desiccation-Sensitive) Seeds.....	465
<i>Christina Walters, James Wesley-Smith, Jennifer Crane, Lisa M. Hill,</i> <i>Pawel Chmielarz, Norman W. Pammenter, and Patricia Berjak</i>	
18.1 Introduction	465
18.2 Physical Factors	468
18.3 Physiological Attributes	474
18.4 Genetic Considerations.....	476
18.5 Practical Aspects of Recalcitrant Seed Storage.....	477
18.5.1 Plant Information and Seed Handling.....	477
18.5.2 How to Identify Storage Behavior	478
References	479
18.6 Protocols for Working with Recalcitrant Seeds	482
18.6.1 How to Dry Seeds and Measure Water Status	482
18.6.2 How to Cool Seed Tissues to Liquid Nitrogen Temperatures	483
18.6.3 How to Recover Seed Tissues from Liquid Nitrogen.....	484
19. Cryopreservation of Orthodox (Desiccation Tolerant) Seeds.....	485
<i>Hugh W. Pritchard and Jayanthi Nadarajan</i>	
19.1 Introduction	485
19.2 The Latent Life of Dry Seeds	486
19.3 Moisture Content	488
19.4 Repeated Cooling and Storage Temperature.....	489
19.5 Recovery	490
19.6 The Future	490
References	491
19.7 Protocols	495
19.7.1 General Seed Cryopreservation	495
19.7.2 Cryopreservation of Australian Wild Citrus Seed	496
19.7.3 Manipulation of Seed Moisture Content.....	497
19.7.4 Determination of the Unfrozen Water Content.....	499
19.7.5 Seed Rehydration and Heating Based on Lipid Melting Characteristics	501
Index	503

Plant Cryopreservation: A Practical Guide

Reed, B.B.M. (Ed.)

2008, XXX, 514 p., Hardcover

ISBN: 978-0-387-72275-7
