<b>Introduction</b>	xi
<b>1 Operators and Equations</b>	1
1.1 Operators on linear spaces	1
1.2 Divided differences of operators	9
1.3 Fixed points of operators	25
1.4 Exercises	29
<b>2 The Newton-Kantorovich (NK) Method</b>	41
2.1 Linearization of equations	41
2.2 Semilocal convergence of the NK method	42
2.3 New sufficient conditions for the secant method	54
2.4 Concerning the “terra incognita” between convergence regions of two Newton methods	62
2.5 Enlarging the convergence domain of the NK method under regular smoothness conditions	75
2.6 Convergence of NK method and operators with values in a cone	80
2.7 Convergence theorems involving center-Lipschitz conditions	84
2.8 The radius of convergence for the NK method	90
2.9 On a weak NK method	102
2.10 Bounds on manifolds	103
2.11 The radius of convergence and one-parameter operator embedding	106
2.12 NK method and Riemannian manifolds	110
2.13 Computation of shadowing orbits	113
2.14 Computation of continuation curves	116
2.15 Gauss-Newton method	121
2.16 Exercises	125
<b>3 Applications of the Weaker Version of the NK Theorem</b>	133
3.1 Comparison of Kantorovich and Moore theorems	133
3.2 Comparison of Kantorovich and Miranda theorems	137

3.3	The secant method and nonsmooth equations . . . . .	142
3.4	Improvements on curve tracing of the homotopy method . . . . .	153
3.5	Nonlinear finite element analysis . . . . .	157
3.6	Convergence of the structured PSB update in Hilbert space . . . . .	162
3.7	On the shadowing lemma for operators with chaotic behavior . . . . .	166
3.8	The mesh independence principle and optimal shape design problems . . . . .	170
3.9	The conditioning of semidefinite programs . . . . .	180
3.10	Exercises . . . . .	186
<b>4</b>	<b>Special Methods . . . . .</b>	<b>193</b>
4.1	Broyden's method . . . . .	193
4.2	Stirling's method . . . . .	202
4.3	Steffensen's method . . . . .	207
4.4	Computing zeros of operator satisfying autonomous differential equations . . . . .	215
4.5	The method of tangent hyperbolas . . . . .	219
4.6	A modified secant method and function optimization . . . . .	230
4.7	Local convergence of a King-Werner-type method . . . . .	233
4.8	Secant-type methods . . . . .	235
4.9	Exercises . . . . .	239
<b>5</b>	<b>Newton-like Methods . . . . .</b>	<b>261</b>
5.1	Newton-like methods of "bounded deterioration" . . . . .	261
5.2	Weak conditions for the convergence of a certain class of iterative methods . . . . .	269
5.3	Unifying convergence analysis for two-point Newton methods . . . . .	275
5.4	On a two-point method of convergent order two . . . . .	290
5.5	Exercises . . . . .	304
<b>6</b>	<b>Analytic Computational Complexity: We Are Concerned with the Choice of Initial Approximations . . . . .</b>	<b>325</b>
6.1	The general problem . . . . .	325
6.2	Obtaining good starting points for Newton's method . . . . .	328
6.3	Exercises . . . . .	336
<b>7</b>	<b>Variational Inequalities . . . . .</b>	<b>339</b>
7.1	Variational inequalities and partially relaxed monotone mapping . . . . .	339
7.2	Monotonicity and solvability of nonlinear variational inequalities . . . . .	345
7.3	Generalized variational inequalities . . . . .	352
7.4	Semilocal convergence . . . . .	354
7.5	Results on generalized equations . . . . .	358
7.6	Semilocal convergence for quasivariational inequalities . . . . .	362
7.7	Generalized equations in Hilbert space . . . . .	365
7.8	Exercises . . . . .	371

<b>8</b>	<b>Convergence Involving Operators with Outer or Generalized Inverses</b>	<b>379</b>
8.1	Convergence with no Lipschitz conditions	379
8.2	Exercises	388
<b>9</b>	<b>Convergence on Generalized Banach Spaces: Improving Error Bounds and Weakening of Convergence Conditions</b>	<b>395</b>
9.1	$K$ -normed spaces	395
9.2	Generalized Banach spaces	408
9.3	Inexact Newton-like methods on Banach spaces with a convergence structure	417
9.4	Exercises	436
<b>10</b>	<b>Point-to-Set-Mappings</b>	<b>445</b>
10.1	Algorithmic models	445
10.2	A general convergence theorem	449
10.3	Convergence of $k$ -step methods	451
10.4	Convergence of single-step methods	454
10.5	Convergence of single-step methods with differentiable iteration functions	458
10.6	Monotone convergence	468
10.7	Exercises	471
<b>11</b>	<b>The Newton-Kantorovich Theorem and Mathematical Programming</b>	<b>475</b>
11.1	Case 1: Interior point methods	475
11.2	Case 2: LP methods	482
11.3	Exercises	489
