

Contents

1. Introduction	1
1.1 What is symmetry theory?	1
1.2 Outline of the book	1
1.3 This is an interactive book	3
1.4 Learning <i>Mathematica</i>	4
1.5 The human's view of <i>Mathematica</i>	5
1.6 Does <i>Mathematica</i> make errors ?	6
2. A tutorial on notebooks	7
2.1 What are <i>Mathematica</i> notebooks?	7
2.2 A basic notebook tutorial	8
3. A basic <i>Mathematica</i> tutorial	13
Section 3.1 This tutorial	13
Section 3.2 On-line help	14
Section 3.3 Basic operations	15
Section 3.4 The FrontEnd	19
Section 3.5 The Kernel	21
Section 3.6 <i>Mathematica</i> graphics	24
4. The meaning of symmetry	29
4.1 Symmetry and its undefined terms	29
4.2 Geometric symmetry	30
4.3 Algebraic symmetry	46
4.4 Summary and preview	54
5. Axioms of group theory	55
5.1 Undefined terms in the axioms	55
5.2 The four axioms	56

6. Several kinds of groups	59
6.1 Numbers under Times	59
6.2 Matrices under Dot	60
6.3 Axial rotation groups	62
6.4 Permutations under Permute	63
6.5 Fruit flies under reproduction (a non-group)	67
7. The fundamental theorem	73
7.1 Statement and commentary	73
7.2 Proof of the fundamental theorem	74
7.3 How this theorem helps	79
8. The multiplication table	81
8.1 The generalized “multiplication” table	81
8.2 Latin square theorem	83
8.3 The Latin square converse	84
8.4 Automated multiplication tables	87
8.5 How MultiplicationTable works	90
8.6 Test MultiplicationTable	95
8.7 Redundant groups	96
9. Molecules	99
9.1 Molecule definitions in <i>Mathematica</i>	99
9.2 Molecule “objects”	101
9.3 Molecule object operators	102
9.4 How to make a molecule	103
9.5 Molecule graphics	104
9.6 StereoView	109
9.7 AxialViews (a 3D shop drawing)	110
10. The point groups	113
10.1 Introduction	113
10.2 The unit matrix	113
10.3 The inversion matrix	114
10.4 Roto-reflection matrices	118
10.5 Only two kinds of matrices	132
11. Euler rotation matrices	137
11.1 The Euler idea	137
11.2 The Euler rotations visualized	138

11.3 The Euler matrix theorem	140
11.4 The function EulerMatrix[ϕ, θ, ψ]	141
11.5 Euler headaches	142
11.6 The inverse function EulerAngles[matrix]	143
12. Lie's axis-angle rotations	149
12.1 Introduction	149
12.2 Rotation matrices in 2D form a Lie group	149
12.3 Lie group for 2D rotation	150
12.4 Lie group for 3D rotation	152
12.5 The operator AxialRotation[axis, angle]	157
13. Recognizing matrices	163
13.1 The problem, and a strategy	163
13.2 Recognize a numerical rotation matrix	165
13.3 Recognize a rotoreflection matrix	168
13.4 Recognize a reflection matrix	168
13.5 Operator RecognizeMatrix	169
13.6 The complex eigenvectors	170
14. Introduction to the character table	173
14.1 Introduction	173
14.2 The standard character table	173
14.3 Some facts about the character table	175
14.4 The rightmost column; bases for reps	180
14.5 Various character table operators	181
15. The operator MakeGroup	183
15.1 An operator for constructing groups	183
15.2 MakeGroup, step by step	184
15.3 MakeGroup with roundoff	189
16. Product groups	195
16.1 An introductory example (group C_{3h})	195
16.2 The product group theorem	196
16.3 How to recognize product groups	197
16.4 Products with C_h vs. products with C_i	198
16.5 Some careful checking, and a scandal	200
17. Naming the point groups	207
17.1 Molecules and point groups	207
17.2 Schönflies names	207

17.3 International names	209
17.4 Schönflies-International correspondences	212
17.5 Some interesting name correspondences	213
18. Tabulated representations of groups	217
18.1 Cartesian representation tables	217
18.2 Very simple groups	221
18.3 Groups with a principal axis	223
18.4 Platonic groups	231
19. Visualizing groups	251
19.1 Constellations vs. stereograms	251
19.2 Constellations with a principal axis	253
19.3 Constellations based on Platonic solids	257
19.4 That's it, folks. What Next?	267
20. Subgroups	269
20.1 Definition of subgroup	269
20.2 A simple but nontrivial example (group C_{3h})	270
20.3 Finding all the subgroups of a group	272
20.4 An orientation issue	273
20.5 Symmetry breaking in PCl_5 (group D_{3h})	274
20.6 Definition of “symmetry breaking”	279
21. Lagrange's Theorem	283
21.1 Purpose	283
21.2 Definition of coset	283
21.3 An operator for cosets	284
21.4 The coset lemma	286
21.5 Lagrange's theorem proved	288
22. Classes	291
22.1 Qualitative meaning of classes	291
22.2 Graphics of two "similar" elements	291
22.3 Finding all the similar elements	293
22.4 Definition of class	294
22.5 A very pregnant little discussion	294
22.6 Operator <code>MakeClass</code>	295
22.7 Table lookup operators for classes	296
22.8 Theorems about classes	297
22.9 Class character, and other class properties	298

22.10 The Classify operator	300
22.11 Isomorphisms among order 6 point groups	301
23. Symmetry and quantum mechanics	309
23.1 Transformation of eigenfunctions	309
23.2 Delocalized orbitals of benzene	313
23.3 Linear combinations of degenerate orbitals	314
23.4 Qualitative meaning of degeneracy	319
23.5 Accidental degeneracy	320
23.6 Dynamic symmetry	321
23.7 Motion reversal symmetry	322
24. Transformation of functions	329
24.1 What is a function transform ?	329
24.2 An intuitive way (but it's wrong)	330
24.3 The right way	330
25. Matrix representations of groups	335
25.1 Representation theory	335
25.2 Definition of representation	335
25.3 Faithful and unfaithful reps	336
25.4 MorphTest	337
25.5 Why representations are important	338
25.6 The rep construction recipe	339
26. Similar representations	343
26.1 Given two reps, are they similar?	343
26.2 Universal pseudocommuter matrices	344
26.3 Universal true commuter matrices	351
26.4 A whiff of Schur's Second Lemma	352
27. The MakeRep operators	357
27.1 Four MakeRep operators	357
27.2 Polynomial basis (polynomials in x, y, z)	358
27.3 Matrix basis (I_x, I_y, I_z)	362
27.4 Atomic orbital basis.....	362
27.5 Molecular orbital basis	363
27.6 Check the characters of the reps	363
28. Reducible representations	371
28.1 The Cartesian representations	371
28.2 Block diagonal multiplication	372

28.3 Reducible and irreducible representations	374
28.4 Mulliken names of irreducible representations	375
28.5 Example: the rep of the benzene orbitals	376
28.6 Reduction demo	377
28.7 What is the point of rep reduction?	378
29. The MakeUnitary operator	385
29.1 Unitary and non-unitary reps	385
29.2 The MakeUnitary theorem	390
29.3 The operator MakeUnitary	394
30. Schur's reduction	397
30.1 Schur's idea	397
30.2 Two experimental rep reductions	398
30.3 The ReduceRep operator	404
30.4 Tests of ReduceRep	405
30.5 What have we learned?	407
31. Schur's First Lemma	411
31.1 Statement of the Lemma	411
31.2 Proof	411
32. Schur's Second Lemma	415
32.1 Introduction	415
32.2 Statement and discussion	415
32.3 Proof, using the unitary property	416
32.4 A whiff of the great orthogonality	418
33. The Great Orthogonality	421
33.1 Skewers	421
33.2 Two statements of the Great Orthogonality	422
33.3 Two Great Orthogonality demos	424
33.4 Proof of the Great Orthogonality	427
34. Character orthogonalities	431
34.1 Introduction and demonstrations	431
34.2 Row orthogonality proof	434
34.3 Column orthogonality proof	436
34.4 Character tables are square	438
34.5 Check the twiddle matrix numerically	439
34.6 Unique rows and columns	440
34.7 A theorem of your very own	440

35. Reducible rep analysis	443
35.1 The point of rep analysis	443
35.2 Symbolic development of Analyze	444
35.3 Numerical example of rep analysis	446
35.4 The Analyze operator	447
36. The regular representation	449
36.1 What is the regular representation?	449
36.2 Characters of the regular representation	452
36.3 The golden property	452
36.4 Demo of the golden property	453
36.5 The d^2 corollary	454
37. Projection operators	459
37.1 Projection operators in geometry	459
37.2 Projection operators in algebra	460
37.3 Symbolic derivation of the projectors	464
37.4 Your own examples of ProjectET	469
37.5 Your own examples of ProjectED	470
38. Tabulated bases for representations	473
38.1 Introduction	473
38.2 Basis sets from harmonic functions	473
38.3 Example: basis functions for D_{6d}	476
39. Quantum matrix elements	483
39.1 Matrix elements defined	483
39.2 The Bedrock Theorem, and its corollary	484
39.3 Example using two polynomials	486
39.4 Major example: benzene transition moments	492
39.5 Proof of the Bedrock Theorem	495
39.6 Integrals over functions of pure symmetry	497
40. Constructing SALCs	507
40.1 What are SALCs ?	507
40.2 Make SALCs, step by step	508
40.3 Automation	514
41. Hybrid orbitals	521
41.1 Hybrid orbitals in general	521
41.2 Pauling's hybridization strategy	522
41.3 Implement Pauling's strategy	524

41.4 The SALC shortcut	529
41.5 Electron density in sp^3 orbitals	532
42. Vibration analysis	535
42.1 Problem and strategy	535
42.2 A step-by-step example	536
42.3 Automate the displacement rep	541
42.4 Analyze the vibrations	543
42.5 One-click examples	546
43. Multiple symmetries	549
43.1 Inspiration	549
43.2 Reps made from products of basis functions	549
43.3 Lemma: Character of a direct product	551
43.4 Vibronic examples	551
44. One-photon selection rules	565
44.1 The main idea	565
44.2 Polarization vectors and light amplitude	565
44.3 Projection of the one-photon operator	568
44.4 Transition oscillations	570
45. Two-photon tensor projections	577
45.1 The operator for two-photon processes	577
45.2 Operators for tensor projection	580
45.3 Self-purifying tensor elements	582
45.4 Operators for tensor projection	583
45.5 Two-photon tensor projection table	591
45.6 Axis permutation forbiddenness	598
45.7 Alternative forms of the tensors	599
46. Three-photon tensor projections	601
46.1 The operator for three-photon processes	601
46.2 The projection	603
46.3 Self-purifying tensor elements	604
46.4 Operators for tensor projection	604
46.5 Three-photon tensor projection table	611
46.6 Axis permutation forbiddenness	640

47. Class sums and their products	643
47.1 Motivation	643
47.2 Declaration of a "group algebra"	643
47.3 Class sums	644
47.4 ClassSum theorems	645
47.5 Class sum multiplication for a familiar group	647
47.6 The ClassSumProduct operator	648
47.7 ClassSumMultiplicationTable	650
48. Make a character table	653
48.1 Introduction	653
48.2 Make the CSMT again	653
48.3 Class sum product coefficients	654
48.4 A strategy for the character table	656
48.5 Use the master equation	657
48.6 Use column orthogonality	661
48.7 Final formatting	663
48.8 Character table of a new group	665
A1. Mathematica packages	673
A2. SymbolizeExpressions	675
A3. Matrix review	677
B1. Bibliography	679
B1.1 Wolfram Research, Inc.	679
B1.2 Applied group theory books	679
B1.3 Mathematica books	680
B1.4 Chemistry and Physics books	681
B1.5 Math books	682
B1.6 Data collections	682
B1.7 Research papers	682
Index	685

Symmetry Theory in Molecular Physics with Mathematica

A new kind of tutorial book

McClain, W.

2008, XV, 689 p. With CD-ROM., Hardcover

ISBN: 978-0-387-73469-9
