Foreword	vii
Preface	ix
Contributors	xxiii
List of Abbreviations	xxix
1. Overview and History of Image-Guided Interventions	1
<i>Robert Galloway and Terry Peters</i>	
1.1 Introduction.....	1
1.2 Stereotaxy	2
1.3 The Arrival of Computed Tomography	6
1.3.1 Computer Systems Come of Age	7
1.4 Image-Guided Surgery.....	8
1.5 Three-Dimensional Localization	9
1.5.1 Handheld Localizers.....	10
1.6 Registration Techniques	12
1.7 Display	14
1.8 The Next Generation of Systems	15
References	16
2. Tracking Devices	23
<i>Wolfgang Birkfellner, Johann Hummel, Emmanuel Wilson, and Kevin Cleary</i>	
2.1 Introduction.....	23
2.2 Tracking: A Brief History	24
2.3 Principles of Optical Tracking Systems.....	27
2.4 Principles of Electromagnetic Tracking.....	28
2.5 Other Technologies.....	31
2.6 Data Transmission and Representation.....	34

2.7 Accuracy	35
2.8 Conclusions	35
References	36
3. Visualization in Image-Guided Interventions.....	45
<i>David Holmes III, Maryam Rettmann, and Richard Robb</i>	
3.1 Introduction.....	45
3.2 Coordinate Systems	46
3.3 Preoperative Images.....	47
3.3.1 Computed Tomography.....	48
3.3.2 Magnetic Resonance Imaging	49
3.3.3 Nuclear Image Scans and Other Functional Data	50
3.4 Intraoperative Data	51
3.4.1 X-Ray Fluoroscopy and Rotational Angiography	51
3.4.2 Intraoperative Ultrasound.....	52
3.4.3 Intraoperative CT and Intraoperative MR	53
3.5 Integration	53
3.5.1 Segmentation and Surface Extraction	53
3.5.2 Registration	54
3.6 Visualization	55
3.6.1 2D – Multi-Planar and Oblique	55
3.6.2 3D Surface Rendering and 3D Volume Rendering	57
3.6.3 Fusion, Parametric Mapping, and Multi-Object Rendering	59
3.7 Systems for Visualization	61
3.7.1 Low-Level Interfacing to Hardware.....	61
3.7.2 Pipeline-Based APIs.....	62
3.7.3 Scene-Graph APIs	62
3.7.4 Software Rendering APIs.....	63
3.7.5 Numerical Computing with Visualization.....	65
3.8 Real-Time Feedback and Hardware Interfacing	65
3.8.1 Receiving Input	65
3.8.2 Presenting Output	67
3.9 Applications	67
3.9.1 Epilepsy Foci Removal	67
3.9.2 Left Atrium Cardiac Ablation	68
3.9.3 Permanent Prostate Brachytherapy	70
3.9.4 Virtual and Enhanced Colonoscopy	72
3.9.5 Surgical Separation of Conjoined Twins.....	73
3.10 Summary	75
References	76

4. Augmented Reality.....81*Frank Sauer, Sebastian Vogt, and Ali Khamene*

4.1	Introduction.....	81
4.1.1	What Is Augmented Reality?	81
4.1.2	Why AR for Interventional Guidance?	83
4.2	Technology Building Blocks and System Options	84
4.3	System Examples and Applications	85
4.3.1	Optical Microscope Systems	85
4.3.2	Video AR Systems	88
4.3.3	Large Screens	91
4.3.4	Tomographic Overlays	97
4.3.5	Video Endoscope Systems	102
4.3.6	Other Methods: Direct Projection	104
4.4	System Features Overview	104
4.4.1	Microscope Systems.....	104
4.4.2	Video AR HMD Systems	105
4.4.3	Semitransparent Screens.....	105
4.4.4	Tomographic Displays	106
4.4.5	Optical See-Through HMD Systems.....	106
4.5	Technical Challenges and Fundamental Comparisons	107
4.5.1	Right Place: Calibration	107
4.5.2	Right Time: Synchronization	107
4.5.3	Right Way: Visualization and Perception	108
4.6	Concluding Remarks and Outlook.....	110
	References	111

5. Software.....121*Luis Ibáñez*

5.1	Introduction.....	121
5.1.1	The Need for Software	121
5.1.2	Software as a Risk Factor	122
5.1.3	Quality Control.....	123
5.1.4	The Cost of Software Maintenance	123
5.1.5	Open Source Versus Closed Source	124
5.2	Software Development Process	127
5.2.1	FDA Guidelines.....	128
5.2.2	Requirements.....	130
5.2.3	Validation and Verification	131
5.2.4	Testing.....	131
5.2.5	Bug Tracking.....	138

5.2.6	Coding Style	139
5.2.7	Documentation	140
5.2.8	Refactoring	141
5.2.9	Backward Compatibility Versus Evolution.....	142
5.3	Design	143
5.3.1	Safety by Design	143
5.3.2	Architecture	144
5.3.3	User Interaction	145
5.3.4	Keeping It Simple.....	146
5.3.5	Risk Analysis.....	147
5.3.6	State Machines	148
5.3.7	Devices	154
5.3.8	Realism Versus Informative Display	156
	References	156
6.	Rigid Registration	159
	<i>Ziv Yaniv</i>	
6.1	Introduction.....	159
6.2	3D/3D Registration.....	160
6.2.1	Geometry-Based Methods.....	161
6.2.2	Intensity-Based Methods.....	167
6.3	2D/3D Registration	172
6.3.1	Geometry-Based Methods.....	175
6.3.2	Intensity-Based Methods.....	178
6.3.3	Gradient-Based Methods.....	181
6.4	Registration Evaluation.....	183
6.5	Conclusions.....	186
	References	187
7.	Nonrigid Registration	193
	<i>David Hawkes, Dean Barratt, Tim Carter, Jamie McClelland, and Bill Crum</i>	
7.1	Introduction.....	193
7.2	NonRigid Registration Technologies Potentially Applicable to Image-Guided Interventions.....	196
7.2.1	Feature-Based Algorithms.....	197
7.2.2	Intensity-Based Algorithms.....	198
7.2.3	Optimization.....	199
7.2.4	Nonrigid 2D-3D Registration.....	199
7.2.5	Incorporation of Biomechanical Models.....	200

7.2.6 Statistical Shape Models	201
7.2.7 Real-Time Requirements.....	201
7.3 Validation.....	202
7.4 Applications of Image-Guided Applications to Soft Deforming Tissue	203
7.4.1 Locally Rigid Transformations	203
7.4.2 Biomechanical Models	203
7.4.3 Motion Models	206
7.4.4 Application of Statistical Shape Models	211
7.5 Conclusion	213
References	214
 8. Model-Based Image Segmentation for Image-Guided Interventions	219
<i>Wiro Niessen</i>	
8.1 Introduction.....	219
8.2 Low-Level Image Segmentation.....	220
8.3 Model-Based Image Segmentation	222
8.3.1 Introduction	222
8.3.2 Classical Parametric Deformable Models or Snakes	223
8.3.3 Level Set Segmentation.....	224
8.3.4 Statistical Shape Models	228
8.4 Applications	232
8.4.1 Segmentation in Image-Guided Interventions.....	232
8.5 Future Directions	234
References	235
 9. Imaging Modalities.....	241
<i>Kenneth H. Wong</i>	
9.1 Introduction.....	241
9.2 X-Ray Fluoroscopy and CT	242
9.2.1 Basic Physics Concepts	242
9.2.2 Fluoroscopy	244
9.2.3 Computed Tomography.....	247
9.2.4 Current Research and Development Areas	250
9.3 Nuclear Medicine.....	251
9.3.1 Basic Physics Concepts	251
9.3.2 Positron Emission Tomography	252
9.3.3 Single Photon Emission Tomography	254

9.3.4	Patient Access and Work Environment.....	256
9.3.5	Current Research and Development Areas	256
9.4	Magnetic Resonance Imaging.....	257
9.4.1	Basic Physics Concepts.....	257
9.4.2	System Components.....	258
9.4.3	Image Characteristics	259
9.4.4	Patient Access and Work Environment.....	259
9.4.5	Current Research and Development Areas	260
9.5	Ultrasound.....	262
9.5.1	Basic Physics Concepts.....	262
9.5.2	System Components.....	263
9.5.3	Image Characteristics	264
9.5.4	Patient Access and Work Environment.....	265
9.5.5	Current Research and Development Areas	265
9.6	Summary and Discussion.....	268
	References	270
10.	MRI-Guided FUS and its Clinical Applications.....	275
	<i>Ferenc Jolesz, Nathan McDannold, Greg Clement,</i>	
	<i>Manabu Kinoshita, Fiona Fennessy, and Clare Tempany</i>	
10.1	Introduction	275
10.2	MRgFUS Technology	276
10.2.1	Acoustic Components.....	279
10.2.2	Closed-Loop Control.....	281
10.3	Planning and Execution.....	284
10.4	The Commercial Therapy Delivery System	285
10.5	Clinical Applications.....	289
10.5.1	Commercial Brain Treatment System: ExAblate	291
10.6	Targeted Drug Delivery and Gene Therapy	292
10.6.1	BBB Disruption	293
10.7	Conclusion.....	297
	References	297
11.	Neurosurgical Applications	309
	<i>Terry Peters, Kirk Finnis, Ting Guo, and Andrew Parrent</i>	
11.1	Introduction	309
11.2	Stereotactic Neurosurgery	309
11.3	Atlases	311
11.4	Intraoperative Electrophysiological Confirmation	312

11.5	Electrophysiological Databases.....	313
11.6	Standard Brain Space	314
11.7	Image Registration.....	315
11.8	Surgical Targets.....	316
11.8.1	Standardizing Electrophysiological Data in Patient Native MRI-Space	317
11.8.2	Application to Deep-Brain Neurosurgery	318
11.8.3	Representative Database Searches	318
11.8.4	Target Prediction Using EP Atlases	321
11.9	Integration of the Neurosurgical Visualization and Navigation System.....	321
11.9.1	Digitized Brain Atlas and Segmented Deep-Brain Nuclei.....	322
11.9.2	Final Surgical Target Locations	322
11.9.3	Surgical Instrument Representation	322
11.9.4	Visualization and Navigation Platform	322
11.10	System Validation.....	324
11.10.1	Conventional Planning Approach	324
11.10.2	System-Based Planning Procedure	324
11.11	Discussion.....	328
	References	329
12.	Computer-Assisted Orthopedic Surgery.....	333
	<i>Antony Hodgson</i>	
12.1	Introduction	333
12.2	Orthopedic Practice	336
12.2.1	Clinical Practice of Orthopedics.....	336
12.2.2	CAOS Procedures.....	337
12.2.3	Review of Quantitative Technologies Used in Orthopedics.....	338
12.3	Evaluation.....	339
12.3.1	Improved Technical and Functional Outcomes..	339
12.3.2	Reduced Operative Times	342
12.3.3	Reduced Costs	342
12.3.4	Other Issues Affecting Adoption.....	343
12.3.5	Prospective Randomized Clinical Trials	344
12.4	Practice Areas.....	346
12.4.1	Hip Replacement	346
12.4.2	Knee Replacement.....	357
12.4.3	Pedicle Screw Insertion	366

12.4.4 Fracture Repair	370
12.5 Summary and Future Trends	375
References	376
13. Thoracoabdominal Interventions	387
<i>Filip Banovac, Jill Bruno, Jason Wright, and Kevin Cleary</i>	
13.1 Introduction	387
13.2 Lung: Bronchoscopic Biopsy	389
13.2.1 Beginings of Guided Bronchoscopy: Biosense	389
13.2.2 Clinical Evolution: SuperDimension	392
13.2.3 Aurora-Based System	393
13.3 Liver	393
13.3.1 Transjugular Intrahepatic Shunt Placement (TIPS)	394
13.3.2 Biopsy and Thermoablation	396
13.3.3 Image-Guided Liver Surgery	399
13.4 Kidney: Ultrasound-Guided Nephrostomy	401
13.5 Laparoscopic Guidance	403
13.5.1 Phantom Investigations	404
13.5.2 Swine Studies	404
13.6 Summary and Research Issues	405
References	406
14. Real-Time Interactive MRI for Guiding Cardiovascular Surgical Interventions	409
<i>Michael Guttman, Keith Horvath, Robert Lederman, and Elliot McVeigh</i>	
14.1 Introduction	409
14.2 Interventional MR Imaging System	411
14.2.1 Magnet Configuration	411
14.2.2 Interventional Imaging Platform	411
14.2.3 Pulse Sequences and Image Reconstruction	412
14.2.4 Interactive Imaging Features	413
14.2.5 Invasive Devices and Experiments	416
14.2.6 Room Setup	417
14.3 Initial Preclinical Procedures	418
14.4 Discussion	422
References	424

15. Three-Dimensional Ultrasound Guidance and Robot Assistance for Prostate Brachytherapy	429
<i>Zhouping Wei, Lori Gardi, Chandima Edirisinghe, Dónal Downey, and Aaron Fenster</i>	
15.1 Introduction	429
15.1.1 Prostate Brachytherapy	431
15.1.2 Limitations of Current Brachytherapy	433
15.1.3 Potential Solutions	433
15.2 System Description	434
15.2.1 Hardware Components	434
15.2.2 System Calibration	436
15.2.3 Software Tools	438
15.3 System Evaluation	445
15.3.1 Evaluation of Calibration	445
15.3.2 Needle Positioning and Orientation Accuracy by Robot	449
15.3.3 Needle Targeting Accuracy	450
15.3.4 Evaluation of the Prostate Segmentation Algorithm	452
15.3.5 Evaluation of the Needle Segmentation Algorithm	454
15.3.6 Evaluation of the Seed Segmentation Algorithm	455
15.4 Discussion	457
References	458
16. Radiosurgery	461
<i>Sonja Dieterich, James Rodgers, and Rosanna Chan</i>	
16.1 Introduction	461
16.1.1 Definition of Radiosurgery	461
16.1.2 Review of Body Sites Treated with Radiosurgery	462
16.1.3 What is Image-Guided Radiosurgery (IGRT)? ..	463
16.2 Gamma Knife®	464
16.2.1 History	468
16.2.2 Current Status	471
16.2.3 Developments	475
16.3 Conventional Linac-Based Radiosurgery Systems	477
16.3.1 Frame-Based Systems	478
16.3.2 Image-Guided Setup Systems	480

16.3.3	Image-Guided Treatment with Respiratory Motion.....	481
16.4	Image-Guided Robotic Radiosurgery.....	481
16.4.1	History and Description of the CyberKnife.....	481
16.4.2	Frameless Tracking Technology for Cranial Surgery, Spine, and Body.....	482
16.4.3	Treatment Planning	490
16.4.4	Treatment Delivery.....	491
16.4.5	Four-Dimensional Real-Time Adaptive Respiratory Tracking (Synchrony) Technology ..	491
16.5	Future of Image-Guided Radiosurgery.....	494
16.5.1	Future Tracking Technologies.....	494
16.5.2	Treatment Planning Algorithms	497
16.6	Summary	497
	References	497
17.	Radiation Oncology.....	501
	<i>David Jaffray, Jeffrey Siewerdsen, and Mary Gospodarowicz</i>	
17.1	Introduction	501
17.2	Oncological Targets and the Nature of Disease Management.....	502
17.3	Imaging and Feedback in Intervention	503
17.3.1	Formalisms for Execution of Therapy.....	503
17.3.2	Dimensions of an Image-Guided Solution for Radiation Therapy	504
17.3.3	Image Guidance Technologies in Radiation Oncology	506
17.4	Image-Guided Applications in Radiation Oncology	514
17.4.1	Prostate Cancer: Off-Line and Online Models....	514
17.4.2	Stereotactic Body Radiation Therapy (SBRT) for Cancer of the Lung.....	515
17.4.3	Accelerated Partial Breast Irradiation	517
17.5	Image Guidance Approaches that Bridge Therapeutic Modalities.....	517
17.5.1	The Optimal Intervention	518
17.6	Opportunities in Image-Guided Therapy: New Information Driving Invention.....	520
17.6.1	Image Guidance, Adaptation, and Innovation by the User	521
17.6.2	Environments and Conditions that Support Innovations in Image-Guided Therapy.....	523

17.7 Conclusion.....	525
References	525
18. Assessment of Image-Guided Interventions	531
<i>Pierre Jannin and Werner Korb</i>	
18.1 Introduction	531
18.1.1 General Assessment Definitions.....	532
18.1.2 Complexity of Procedures and Scenarios.....	532
18.1.3 Direct and Indirect Impact of IGI Systems.....	533
18.1.4 Interdisciplinary Collaborations	533
18.1.5 Human–Machine Interaction	533
18.2 Assessment Methodology.....	535
18.2.1 Assessment Objective.....	536
18.2.2 Study Conditions and Data Sets	541
18.2.3 Assessment Methods	543
18.3 Discussion	545
References	547
