
Contents

Preface to the First Edition	vii
Preface to the Second Edition	ix
1 Introduction	1
2 Lie Sphere Geometry	9
2.1 Preliminaries	9
2.2 Möbius Geometry of Unoriented Spheres	11
2.3 Lie Geometry of Oriented Spheres	14
2.4 Geometry of Hyperspheres in S^n and H^n	16
2.5 Oriented Contact and Parabolic Pencils of Spheres	19
3 Lie Sphere Transformations	25
3.1 The Fundamental Theorem	25
3.2 Generation of the Lie Sphere Group by Inversions	30
3.3 Geometric Description of Inversions	34
3.4 Laguerre Geometry	37
3.5 Subgeometries of Lie Sphere Geometry	46
4 Legendre Submanifolds	51
4.1 Contact Structure on Λ^{2n-1}	51
4.2 Definition of Legendre Submanifolds	56
4.3 The Legendre Map	60
4.4 Curvature Spheres and Parallel Submanifolds	64
4.5 Lie Curvatures and Isoparametric Hypersurfaces	72
4.6 Lie Invariance of Tautness	82
4.7 Isoparametric Hypersurfaces of FKM-type	95
4.8 Compact Proper Dupin Submanifolds	112

5	Dupin Submanifolds	125
5.1	Local Constructions	125
5.2	Reducible Dupin Submanifolds	127
5.3	Lie Sphere Geometric Criterion for Reducibility	141
5.4	Cyclides of Dupin	148
5.5	Lie Frames	159
5.6	Covariant Differentiation	165
5.7	Dupin Hypersurfaces in 4-Space	168
	References	191
	Index	201

Lie Sphere Geometry
With Applications to Submanifolds

Cecil, Th.E.

2008, XII, 208 p.,

ISBN: 978-0-387-74656-2
