| <b>1</b> | <b>Basic Ideas of Special Functions and Statistical Distributions</b> | <b>1</b> |
| 1.0      | Introduction  | 1        |
| 1.1      | Gamma Function  | 3        |
| 1.1.1    | Some basic properties of gamma functions                              | 4        |
| 1.1.2    | Wedge product and Jacobians of transformations                        | 6        |
| 1.1.3    | Multiplication formula for gamma functions                            | 8        |
| 1.1.4    | Asymptotic formula for a gamma function                               | 9        |
| 1.1.5    | Bernoulli polynomials   | 9        |
| 1.1.6    | Some basic properties of generalized Bernoulli polynomials            | 9        |
| 1.1.7    | The first three generalized Bernoulli polynomials                     | 10       |
|          | Exercises 1.1.  | 11       |
| 1.2      | The Psi and Zeta Functions  | 12       |
| 1.2.1    | Generalized zeta function   | 12       |
|          | Exercises 1.2.  | 13       |
| 1.3      | Integral Transforms   | 14       |
| 1.3.1    | Mellin transform  | 14       |
| 1.3.2    | Laplace transform   | 17       |
|          | Exercises 1.3.  | 18       |
| 1.4      | Some Statistical Preliminaries  | 19       |
|          | Exercises 1.4.  | 26       |
| 1.5      | Some Properties of Random Variables                                   | 28       |
| 1.5.1    | Multivariate analogues  | 30       |
| 1.5.2    | Marginal and conditional densities                                    | 31       |
|          | Exercises 1.5.  | 33       |
| 1.6      | Beta and Related Functions  | 34       |
| 1.6.1    | Dirichlet integrals and Dirichlet densities                           | 37       |
|          | Exercises 1.6.  | 42       |
| 1.7      | Hypergeometric Series   | 42       |
| 1.7.1    | Evaluation of some contour integrals                                  | 45       |
| 1.7.2    | Residues when several gammas are involved                             | 46       |
|          | Exercises 1.7.  | 48       |

|          |  |           |
|----------|--|-----------|
| 1.8      | Meijer's G-function  | 49        |
|          | Exercises 1.8.   | 54        |
| 1.9      | The H-function   | 54        |
|          | Exercises 1.9.   | 57        |
| 1.10     | Lauricella Functions and Appell's Functions                                  | 58        |
| 1.10.1   | Some properties of $f_A$   | 59        |
| 1.10.2   | Some properties of $f_B$   | 60        |
| 1.10.3   | Some properties of $f_C$   | 60        |
| 1.10.4   | Some properties of $f_D$   | 61        |
|          | Exercises 1.10.  | 64        |
| 1.11     | Special Functions as Solutions of Differential Equations<br>and Applications | 64        |
| 1.11.0   | Introduction   | 64        |
| 1.11.1   | Sine, cosine and exponential functions                                       | 64        |
|          | Exercises 1.11.  | 66        |
| 1.11.2   | Linear second order differential equations                                   | 66        |
| 1.11.3   | Hypergeometric function  | 67        |
|          | Exercises 1.11.  | 69        |
| 1.11.4   | Confluent hypergeometric function  | 70        |
|          | Exercises 1.11.  | 71        |
| 1.11.5   | Hermite polynomials  | 71        |
|          | Exercises 1.11.  | 72        |
| 1.11.6   | Bessel functions   | 72        |
|          | Exercises 1.11.  | 73        |
| 1.11.7   | Laguerre polynomial  | 74        |
| 1.11.8   | Legendre polynomial  | 74        |
|          | Exercises 1.11.  | 74        |
| 1.11.9   | Generalized hypergeometric function  | 75        |
| 1.11.10  | G-function   | 76        |
|          | Exercises 1.11.  | 77        |
