<b>1</b>	<b>Basic Convergence Concepts and Theorems</b>	<b>1</b>
1.1	Some Basic Notation and Convergence Theorems	1
1.2	Three Series Theorem and Kolmogorov's Zero-One Law	6
1.3	Central Limit Theorem and Law of the Iterated Logarithm	7
1.4	Further Illustrative Examples	10
1.5	Exercises	12
	References	16
<b>2</b>	<b>Metrics, Information Theory, Convergence, and Poisson Approximations</b>	<b>19</b>
2.1	Some Common Metrics and Their Usefulness	20
2.2	Convergence in Total Variation and Further Useful Formulas	22
2.3	Information-Theoretic Distances, de Bruijn's Identity, and Relations to Convergence	24
2.4	Poisson Approximations	28
2.5	Exercises	31
	References	33
<b>3</b>	<b>More General Weak and Strong Laws and the Delta Theorem</b>	<b>35</b>
3.1	General LLNs and Uniform Strong Law	35
3.2	Median Centering and Kesten's Theorem	38
3.3	The Ergodic Theorem	39
3.4	Delta Theorem and Examples	40
3.5	Approximation of Moments	44
3.6	Exercises	45
	References	47

<b>4</b>	<b>Transformations</b>	49
4.1	Variance-Stabilizing Transformations	50
4.2	Examples	51
4.3	Bias Correction of the VST	54
4.4	Symmetrizing Transformations	57
4.5	VST or Symmetrizing Transform?	59
4.6	Exercises	59
	References	61
<b>5</b>	<b>More General Central Limit Theorems</b>	63
5.1	The Independent Not IID Case and a Key Example	63
5.2	CLT without a Variance	66
5.3	Combinatorial CLT	67
5.4	CLT for Exchangeable Sequences	68
5.5	CLT for a Random Number of Summands	70
5.6	Infinite Divisibility and Stable Laws	71
5.7	Exercises	77
	References	80
<b>6</b>	<b>Moment Convergence and Uniform Integrability</b>	83
6.1	Basic Results	83
6.2	The Moment Problem	85
6.3	Exercises	88
	References	89
<b>7</b>	<b>Sample Percentiles and Order Statistics</b>	91
7.1	Asymptotic Distribution of One Order Statistic	92
7.2	Joint Asymptotic Distribution of Several Order Statistics	93
7.3	Bahadur Representations	94
7.4	Confidence Intervals for Quantiles	96
7.5	Regression Quantiles	97
7.6	Exercises	98
	References	100
<b>8</b>	<b>Sample Extremes</b>	101
8.1	Sufficient Conditions	101
8.2	Characterizations	105
8.3	Limiting Distribution of the Sample Range	107
8.4	Multiplicative Strong Law	108
8.5	Additive Strong Law	109

8.6	Dependent Sequences .....	111
8.7	Exercises .....	114
	References .....	116
<b>9</b>	<b>Central Limit Theorems for Dependent Sequences .....</b>	<b>119</b>
9.1	Stationary $m$ -dependence .....	119
9.2	Sampling without Replacement .....	121
9.3	Martingales and Examples .....	123
9.4	The Martingale and Reverse Martingale CLTs .....	126
9.5	Exercises .....	127
	References .....	129
<b>10</b>	<b>Central Limit Theorem for Markov Chains .....</b>	<b>131</b>
10.1	Notation and Basic Definitions .....	131
10.2	Normal Limits .....	132
10.3	Nonnormal Limits .....	135
10.4	Convergence to Stationarity: Diaconis-Stroock-Fill Bound .....	135
10.5	Exercises .....	137
	References .....	139
<b>11</b>	<b>Accuracy of Central Limit Theorems .....</b>	<b>141</b>
11.1	Uniform Bounds: Berry-Esseen Inequality .....	142
11.2	Local Bounds .....	144
11.3	The Multidimensional Berry-Esseen Theorems .....	145
11.4	Other Statistics .....	146
11.5	Exercises .....	147
	References .....	149
<b>12</b>	<b>Invariance Principles .....</b>	<b>151</b>
12.1	Motivating Examples .....	152
12.2	Two Relevant Gaussian Processes .....	153
12.3	The Erdős-Kac Invariance Principle .....	156
12.4	Invariance Principles, Donsker's Theorem, and the KMT Construction .....	157
12.5	Invariance Principle for Empirical Processes .....	161
12.6	Extensions of Donsker's Principle and Vapnik-Chervonenkis Classes .....	163
12.7	Glivenko-Cantelli Theorem for VC Classes .....	164
12.8	CLTs for Empirical Measures and Applications .....	167
12.8.1	Notation and Formulation .....	168
12.8.2	Entropy Bounds and Specific CLTs .....	169

12.9	Dependent Sequences: Martingales, Mixing, and Short-Range Dependence . . . . .	172
12.10	Weighted Empirical Processes and Approximations . . . . .	175
12.11	Exercises . . . . .	178
	References . . . . .	180
