
CONTENTS

FOREWORD	xi
PREFACE TO THE SECOND EDITION	xv
ACKNOWLEDGMENTS	xvii
LIST OF FIGURES	xix
LIST OF TABLES	xxiii
1 INTRODUCTION	1
1.1 Problem Formulation: A Cautionary Note	3
1.2 Degrees of Freedom Analysis	3
1.3 Objective Function, Constraints, and Feasible Region	4
1.4 Numerical Optimization	5
1.5 Types of Optimization Problems	7
1.6 Summary	7
Bibliography	8
Exercises	9
2 LINEAR PROGRAMMING	11
2.1 The Simplex Method	12
2.2 Infeasible Solution	17
2.3 Unbounded Solution	19
2.4 Multiple Solutions	21
2.5 Sensitivity Analysis	23
2.6 Other Methods	26
2.7 Hazardous Waste Blending Problem as an LP	28
2.8 Summary	34
Bibliography	34
Exercises	35

3	NONLINEAR PROGRAMMING	41
3.1	Convex and Concave Functions	44
3.2	Unconstrained NLP	47
3.3	Necessary and Sufficient Conditions and Constrained NLP	52
3.4	Constraint Qualification	62
3.5	Sensitivity Analysis	62
3.6	Numerical Methods	64
3.7	Global Optimization and Interval Newton Method	68
3.8	Hazardous Waste Blending: An NLP	69
3.9	Summary	71
	Bibliography	72
	Exercises	72
4	DISCRETE OPTIMIZATION	77
4.1	Tree and Network Representation	78
4.2	Branch-and-Bound for IP	80
4.3	Numerical Methods for IP, MILP, and MINLP	84
4.4	Probabilistic Methods	99
4.5	Hazardous Waste Blending: A Combinatorial Problem	107
	4.5.1 The OA-based MINLP Approach	109
	4.5.2 The Two-Stage Approach with SA-NLP	109
	4.5.3 A Branch-and-Bound Procedure	112
4.6	Summary	116
	Bibliography	116
	Exercises	118
5	OPTIMIZATION UNDER UNCERTAINTY	125
5.1	Types of Problems and Generalized Representation	131
5.2	Chance Constrained Programming Method	139
5.3	L-shaped Decomposition Method	142
5.4	Uncertainty Analysis and Sampling	146
	5.4.1 Specifying Uncertainty Using Probability Distributions .	147
	5.4.2 Sampling Techniques in Stochastic Modeling	148
	5.4.3 Sampling Accuracy and the Decomposition Methods ...	156
	5.4.4 Implications of Sample Size in Stochastic Modeling ...	156
5.5	Stochastic Annealing	157
5.6	Hazardous Waste Blending Under Uncertainty	164
	5.6.1 The Stochastic Optimization Problem	168
	5.6.2 Results and Discussion	170
5.7	Summary	172
	Bibliography	172
	Exercises	175
6	MULTIOBJECTIVE OPTIMIZATION	179
6.1	Nondominated Set	183

6.2	Solution Methods	186
6.2.1	Weighting Method	189
6.2.2	Constraint Method	194
6.2.3	Goal Programming Method	197
6.3	Hazardous Waste Blending and Value of Research	199
6.3.1	Variance as an Attribute: The Analysis of Uncertainty	200
6.3.2	Base Objective: Minimization of Frit Mass	200
6.3.3	Robustness: Minimizing Variance	201
6.3.4	Reducing Uncertainty: Minimizing the Time Devoted to Research	203
6.3.5	Discussion: The Implications of Uncertainty	204
6.4	Summary	208
	Bibliography	208
	Exercises	212
7	OPTIMAL CONTROL AND DYNAMIC OPTIMIZATION	215
7.1	Calculus of Variations	219
7.2	Maximum Principle	224
7.3	Dynamic Programming	227
7.4	Stochastic Processes and Dynamic Programming	231
7.4.1	Ito's Lemma	235
7.4.2	Dynamic Programming Optimality Conditions	236
7.5	Reversal of Blending: Optimizing a Separation Process	240
7.5.1	Calculus of Variations Formulation	247
7.5.2	Maximum Principle Formulation	248
7.5.3	Method of Steepest Ascent of Hamiltonian	250
7.5.4	Combining Maximum Principle and NLP Techniques	251
7.5.5	Uncertainties in Batch Distillation	253
7.5.6	Relative Volatility: An Ito Process	254
7.5.7	Optimal Reflux Profile: Deterministic Case	257
7.5.8	Case in Which Uncertainties Are Present	258
7.5.9	State Variable and Relative Volatility: The Two Ito Processes	260
7.5.10	Coupled Maximum Principle and NLP Approach for the Uncertain Case	262
7.6	Summary	265
	Bibliography	265
	Exercises	266
	Appendix	279
	Index	283

Introduction to Applied Optimization

Diwekar, U.

2008, XXV, 291 p., Hardcover

ISBN: 978-0-387-76634-8
