

Contents

Preface	ix
Introduction	xi
1 Preliminaries	1
1.1 Partition of Unity	1
1.2 Ekeland's Variational Principle	2
1.3 Sobolev Spaces and Embedding Theorems	4
1.4 Differentiable Functionals	8
1.5 The Topological Degree	14
1.6 The Global Flow	17
1.7 The Local Flow	20
1.8 The (PS) Condition	33
1.9 Lax–Milgram Theorem and Weak Solutions	36
2 Schechter–Tintarev Linking	41
2.1 Schechter–Tintarev Linking	41
2.2 Sign-Changing Critical Points via Linking	47
2.3 Jumping Dirichlet Equations	62
2.4 Oscillating Dirichlet Equations	72
2.5 Double Resonant Cases	78
3 Sign-Changing Saddle Point	81
3.1 Rabinowitz's Saddle Points	81
3.2 Sign-Changing Saddle Points	82
3.3 Schrödinger Equations with Potential Well	94
3.4 Flow-Invariant Sets	103
3.5 Sign-Changing Homoclinic-Type Solutions	112
4 On a Brezis–Nirenberg Theorem	121
4.1 Introduction	121
4.2 Generalized Brezis–Nirenberg Theorems	121

4.3	Schrödinger Equations	131
5	Even Functionals	141
5.1	Introduction	141
5.2	An Abstract Theorem	141
5.3	A Classical Superlinear Problem	155
5.4	Composition Convergence Lemmas	158
5.5	Improved Hardy–Poincaré Inequalities	162
5.6	Equations with Critical Hardy Constant	166
5.7	Critical Sobolev–Hardy Exponent Cases	168
6	Parameter Dependence	177
6.1	Bounded Sign-Changing (PS)-Sequences	177
6.2	Bounded (PS) Sequences via Symmetry	199
6.3	Positive and Negative Solutions	207
6.4	Subcritical Schrödinger Equation	212
6.5	Critical Cases	220
7	On a Bartsch–Chang–Wang–Weth Theory	229
7.1	Some Basic Results on Morse Theory	229
7.2	Critical Groups of Sign-Changing Critical Points	234
7.3	Sign-Changing Solutions of Mountain Pass Type	243
7.4	Nodal Domains	249
7.5	Sign-Changing Solutions with Least Energy	252
	References	263
	Index	277

Sign-Changing Critical Point Theory

Zou, W.

2008, XIV, 310 p., Hardcover

ISBN: 978-0-387-76657-7
