Preface vii

1 Introduction 1

 1.1 Early Experiments..... 1

 1.1.1 The Photoelectric Effect..... 1

 1.1.2 The Franck–Hertz Experiment 3

 1.1.3 Atomic Spectroscopy 5

 1.1.4 Electron Diffraction Experiments 7

 1.1.5 The Compton Effect 8

 1.2 Early Theory 10

 1.2.1 The Bohr Atom and the Correspondence Principle. 10

 1.2.2 The de Broglie Wavelength 18

 1.2.3 The Uncertainty Principle 19

 1.2.4 The Compton Wavelength Revisited 21

 1.2.5 The Classical Radius of the Electron 23

 1.3 Units 24

 1.4 Retrospective 25

 1.5 References 25

 Problems 25

2 Elementary Wave Mechanics 27

 2.1 What is Doing the Waving? 27

 2.2 A Gedanken Experiment—Electron Diffraction Revisited 27

 2.3 The Wave Function 28

 2.4 Finding the Wave Function—the Schrödinger Equationö..... 29

 2.5 The Equation of Continuity 32

 2.6 Separation of the Schrödinger Equation—Eigenfunctions 33

 2.7 The General Solution to the Schrödinger Equation 35

 2.8 Stationary States and Bound States 38

 2.9 Characteristics of the Eigenfunctions $\psi_n(x)$ 38

 2.10 Retrospective 43

 Problems 44

3	Quantum Mechanics in One Dimension—Bound States I	47
3.1	Simple Solutions of the Schrödinger Equation	47
3.1.1	The Infinite Square Well—the “Particle-in-a-Box”	47
3.1.2	The Harmonic Oscillator	56
3.2	Penetration of the Classically Forbidden Region	69
3.2.1	The Infinite Square Well with a Rectangular Barrier Inside	73
3.3	Retrospective	77
3.4	References	77
	Problems	78
4	Time-Dependent States in One Dimension	83
4.1	The Ehrenfest Equations	83
4.2	The Free Particle	85
4.3	Quantum Representation of Particles—Wave Packets	86
4.3.1	Momentum Representation of the Operator x	90
4.3.2	The Dirac δ -function	91
4.3.3	Parseval’s Theorem	93
4.4	The Harmonic Oscillator Revisited—Momentum Eigenfunctions	94
4.5	Motion of a Wave Packet	96
4.5.1	Case I. The Free Packet/Particle	98
4.5.2	Case II. The Packet/Particle Subjected to a Constant Field	101
4.5.3	Case III. The Packet/Particle Subjected to a Harmonic Oscillator Potential	104
4.6	Retrospective	108
	Problems	109
5	Stationary States in One Dimension II	113
5.1	The Potential Barrier	113
5.2	The Potential Step	121
5.3	The Finite Square Well—Bound States	123
5.4	The Morse Potential	130
5.5	The Linear Potential	139
5.6	The WKB Approximation	145
5.6.1	The Nature of the Approximation	145
5.6.2	The Connection Formulas for Bound States	148
5.6.3	A Bound State Example—the Linear Potential	155
5.6.4	Tunneling	158
5.6.5	Comparison with a Rectangular Barrier	162
5.6.6	A Tunneling Example—Predissociation	163
5.7	References	165
	Problems	165

6	The Mechanics of Quantum Mechanics	169
6.1	Abstract Vector Spaces	169
6.1.1	Matrix Representation of a Vector	171
6.1.2	Dirac Notation for a Vector	172
6.1.3	Operators in Quantum Mechanics	173
6.2	The Eigenvalue Equation	179
6.2.1	Properties of Hermitian Operators and the Eigenvalue Equation	180
6.2.2	Properties of Commutators	186
6.3	The Postulates of Quantum Mechanics	189
6.3.1	Listing of the Postulates	189
6.3.2	Discussion of the Postulates	190
6.3.3	Further Consequences of the Postulates	198
6.4	Relation Between the State Vector and the Wave Function	200
6.5	The Heisenberg Picture	202
6.6	Spreading of Wave Packets	207
6.6.1	Spreading in the Heisenberg Picture	207
6.6.2	Spreading in the Schrödinger Picture	211
6.7	Retrospective	216
6.8	References	217
	Problems	217
7	Harmonic Oscillator Solution Using Operator Methods	219
7.1	The Algebraic Method	219
7.1.1	The Schrödinger Picture	219
7.1.2	Matrix Elements	224
7.1.3	The Heisenberg Picture	227
7.2	Coherent States of the Harmonic Oscillator	229
7.3	Retrospective	236
7.4	Reference	236
	Problems	237
8	Quantum Mechanics in Three Dimensions—Angular Momentum	239
8.1	Commutation Relations	240
8.2	Angular Momentum Ladder Operators	241
8.2.1	Definitions and Commutation Relations	241
8.2.2	Angular Momentum Eigenvalues	242
8.3	Vector Operators	247
8.4	Orbital Angular Momentum Eigenfunctions—Spherical Harmonics	249
8.4.1	The Addition Theorem for Spherical Harmonics	257
8.4.2	Parity	259
8.4.3	The Rigid Rotor	260
8.5	Another Form of Angular Momentum—Spin	262

8.5.1	Matrix Representation of the Spin Operators and Eigenkets	266
8.5.2	The Stern–Gerlach Experiment	270
8.6	Addition of Angular Momenta	273
8.6.1	Examples of Angular Momentum Coupling	277
8.6.2	Spin and Identical Particles	285
8.7	The Vector Model of Angular Momentum	292
8.8	Retrospective	294
8.9	References	294
	Problems	294
9	Central Potentials	297
9.1	Separation of the Schrödinger Equation	298
9.1.1	The Effective Potential	300
9.1.2	Degeneracy	302
9.1.3	Behavior of the Wave Function for Small and Large Values of r	304
9.2	The Free Particle in Three Dimensions	305
9.3	The Infinite Spherical Square Well	308
9.4	The Finite Spherical Square Well	309
9.5	The Isotropic Harmonic Oscillator	316
9.5.1	Cartesian Coordinates	317
9.5.2	Spherical Coordinates	319
9.6	The Morse Potential in Three Dimensions	339
9.7	Retrospective	343
9.8	References	344
	Problems	344
10	The Hydrogen Atom	347
10.1	The Radial Equation—Energy Eigenvalues	347
10.2	Degeneracy of the Energy Eigenvalues	352
10.3	The Radial Equation—Energy Eigenfunctions	354
10.4	The Complete Energy Eigenfunctions	361
10.5	Retrospective	362
10.6	References	362
	Problems	362
11	Angular Momentum—Encore	365
11.1	The Classical Kepler Problem	365
11.2	The Quantum Mechanical Kepler Problem	367
11.3	The Action of \hat{A}_+	371
11.4	Retrospective	372
11.5	References	372
	Problems	372

12	Time-Independent Approximation Methods	375
12.1	Perturbation Theory	375
12.1.1	Nondegenerate Perturbation Theory	375
12.1.2	Degenerate Perturbation Theory	382
12.2	The Variational Method	390
	Problems	393
13	Applications of Time-Independent Approximation Methods	397
13.1	Hydrogen Atoms	397
13.1.1	Breaking the Degeneracy—Fine Structure	397
13.2	Spin–Orbit Coupling and the Shell Model of the Nucleus	409
13.3	Helium Atoms	411
13.3.1	The Ground State	411
13.3.2	Excited States	417
13.4	Multielectron Atoms	422
13.5	Retrospective	427
13.6	References	428
	Problems	428
14	Atoms in External Fields	431
14.1	Hydrogen Atoms in External Fields	431
14.1.1	Electric Fields—the Stark Effect	431
14.1.2	Magnetic Fields—The Zeeman Effect	436
14.2	Multielectron Atoms in External Magnetic Fields	442
14.3	Retrospective	446
14.4	References	446
	Problems	446
15	Time-Dependent Perturbations	449
15.1	Time Dependence of the State Vector	449
15.2	Two-State Systems	452
15.2.1	Harmonic Perturbation—Rotating Wave Approximation	452
15.2.2	Constant Perturbation Turned On at $t = 0$	455
15.3	Time-Dependent Perturbation Theory	457
15.4	Two-state Systems Using Perturbation Theory	459
15.4.1	Harmonic Perturbation	459
15.4.2	Constant Perturbation Turned On at $t = 0$	462
15.5	Extension to Multistate Systems	464
15.5.1	Harmonic Perturbation	464
15.5.2	Constant Perturbation Turned On at $t = 0$	465
15.5.3	Transitions to a Continuum of States—The Golden Rule	465
15.6	Interactions of Atoms with Radiation	468
15.6.1	The Nature of Electromagnetic Transitions	469

15.6.2	The Transition Rate	470
15.6.3	The Einstein Coefficients—Spontaneous Emission	473
15.6.4	Selection Rules	476
15.6.5	Transition Rates and Lifetimes	480
15.7	References	483
	Problems	483
A	Answers to Problems	485
	Chapter 1	485
	Chapter 2	485
	Chapter 3	487
	Chapter 4	489
	Chapter 5	489
	Chapter 6	490
	Chapter 7	491
	Chapter 8	491
	Chapter 9	492
	Chapter 10	492
	Chapter 11	493
	Chapter 12	493
	Chapter 13	494
	Chapter 14	495
	Chapter 15	496
B	Useful Constants	497
C	Energy Units	499
D	Useful Formulas	501
E	Greek Alphabet	503
F	Acronyms	505
G	Γ-Functions	507
	G.1 Integral Γ -Functions	507
	G.2 Half-Integral Γ -Functions	507
H	Useful Integrals	509
I	Useful Series	511
	I.1 Taylor Series	511
	I.2 Binomial Expansion	511
	I.3 Gauss' Trick	512

J Fourier Integrals 515

K Commutator Identities 519

 K.1 General Identities 519

 K.2 Quantum Mechanical Identities 519

L Miscellaneous Operator Relations 521

 L.1 Baker–Campbell–Hausdorff (BCH) Formula 521

 L.2 Translation Operator 522
