

Contents

- 1 Overview of the Immune Response 1**
 - Introduction 1
 - Components 1
 - Innate Immunity 1
 - Physical Barriers 2
 - Chemical Barriers 2
 - Cellular Barriers 2
 - Innate Mechanisms 3
 - Adaptive/Acquired Immune Response 3
 - Immunogens and Antigens 3
 - Antibodies 4
 - Classes of Immunoglobulins 5
 - Cell Cooperation in Antibody Response 7
 - Primary and Secondary Antibody Responses 7
 - Cells Involved in the Immune Response 8
 - Lymphoid Cells 8
 - Antigen-Presenting Cells 13
 - Polymorphonuclear Leukocytes 17
 - Cellular Migration 19
 - Cell Adhesion Molecules 19
 - Integrins 19
 - Selectins 20
 - Immunoglobulin Superfamily 20
 - Cadherins 20
 - Molecules That Recognize Antigen 21
 - T-Cell Receptor 21
 - T-Cell Activation, T-Cell Receptor Complex
and Signal Transduction 23
 - Pre-T-Cell Receptor 26
 - Antigen Recognition 26
 - Antigen–Antibody Binding 27
 - The Structure of Antigens 27
 - T-Cell Antigen Recognition 27

Major Histocompatibility Complex	28
Major Histocompatibility Complex Molecules	28
Bibliography	30
2 Role of Cytokines	33
Introduction	33
Interleukin-1	33
Kineret (Anakinra)	34
Interleukin-2	35
Interleukin-2 Receptors	35
Clinical Uses of Interleukin-2	36
Interleukin-4	37
Interleukin-5	38
Interleukin-6	39
Interleukin-9	39
Interleukin-10	39
Interleukin-11	41
Oprelvekin (Neumega)	41
Interleukin-13	41
Interleukin-18	42
Interferons	43
Type I Interferons	44
Clinical Applications of Interferons	44
Type II Interferons	46
Colony-Stimulating Factors	48
Clinical Uses of Colony-Stimulating Factors	49
Tumor Necrosis Factor- α	50
Tumor Necrosis Factor Receptors	51
Chemokines	52
CXC Chemokines	52
CC Chemokines	53
C Chemokines	53
CX3C Chemokines	53
Biological Role of Chemokines	53
Chemokine Receptors	54
Chemokines and Disease States	54
Bibliography	55
3 Cytokine Receptors and Signaling	61
Introduction	61
Immunoglobulin Superfamily Receptors	61
Class I Cytokine Receptor Family	63
Class II Cytokine Receptor Family	63
Tumor Necrosis Factor Receptor Family	64
Chemokine Receptor Family	65

Cytokine Receptor-Associated Transcription Factors	66
Signal Transducers and Activators of Transcription	66
Janus Kinases	70
The Janus Family Tyrosine Kinases–Signal Transducers and Activators of Transcription Signaling Pathway	72
The JAK–Cytokine Receptor Interaction	74
Mitogen-Activated Protein Kinases	75
Mitogen-Activated Protein Kinases in Immune Response	77
Effects of Mitogen-Activated Protein Kinases on T Cells	78
Cell Surface Signals Activate Extracellular Signal-Regulated Kinase 1/2 and Other Mitogen-Activated Protein Kinases	79
Nuclear Factor- κ B	79
Inhibitors of Cytokine Cell Signaling	81
SH2-Containing Phosphatase Proteins	81
Protein Inhibitors of Activated Signal Transducers and Activators of Transcription	81
Suppressors of Cytokine Signaling	81
Bibliography	83
 4 Immunosuppressive Agents	87
Introduction	87
Calcineurin Inhibitors	88
Cyclosporine	88
Tacrolimus	91
Target of Rapamycin Inhibitors	93
Sirolimus	93
Everolimus	95
Sphingosine 1-Phosphate Receptor (S1P-R) Modulators	95
Fingolimod	95
Cytotoxic Agents	96
Mycophenolate Mofetil (CellCept)	96
Azathioprine	98
Cyclophosphamide	99
Glucocorticoids	99
Mechanism of Action	100
Absorption, Distribution and Excretion	100
Side Effects	100
Clinical Uses	101
Polyclonal Antibodies	101
Antithymocyte Globulin	101
Rho(D) Immune Globulin	101
Monoclonal Antibodies	102
Future Directions	102
Bibliography	103

5	Monoclonal Antibodies as Therapeutic Agents	107
	Introduction	107
	Production of Monoclonal Antibodies	108
	Screening and Cloning	109
	Murine Antibodies as Therapeutic Agents	109
	Chimeric Antibodies	110
	Complementarity-Determining Region-Grafted Antibodies	111
	Therapeutic Uses of Monoclonal Antibodies	111
	Tissue Transplantation	111
	Psoriasis	113
	Rheumatoid Arthritis	114
	Thrombosis	115
	Treatment of Cancer	116
	Bibliography	121
6	Allergic Disease	127
	Introduction	127
	Hypersensitivity Disease	127
	IgE-Mediated Responses	129
	Regulation of IgE Synthesis	131
	Immediate Hypersensitivity Reaction	131
	Allergic Inflammation	134
	Receptors Associated with Allergic Disease and Asthma	135
	Genetic Predisposition	136
	The Role of T Cells in Allergic Disease and Asthma	136
	The Role of Signal Transducers and Activators of Transcription in Allergic Disease	137
	Neural Pathways in Allergic Disease and Asthma	138
	Role of Neuropeptides in Airway Inflammation	138
	Neurotrophins and Allergic Disease and Asthma	139
	Gene for Allergic Disease	140
	Specific Immunotherapy	140
	Sublingual Immunotherapy	141
	Ragweed Toll-Like Receptor 9 Agonist Vaccine for Immunotherapy	142
	Probiotics for the Treatment of Allergic Disease	142
	Bibliography	142
7	Tissue Transplantation	149
	Introduction	149
	Tissue Typing in Transplantation	150
	Mechanisms of Rejection in Tissue Transplantation	151
	Role of Innate Immune Response in Allotransplant Rejection	153
	Types of Organ Rejection	154
	Hyperacute Rejection	154
	Acute Rejection	154

Chronic Rejection	155
Transplant Tolerance	155
Procedures for Preventing Graft Rejection	156
Clinical Issues in Tissue Transplantation	157
Graft-Versus-Host Disease	158
Clinical Transplantation	159
Kidney Transplantation	159
Liver Transplantation	160
Pancreas Transplantation	162
Heart Transplantation	163
Lung Transplantation	164
Bone Marrow Transplantation	165
Bibliography	166
8 Acquired Immune Deficiency Syndrome	171
Introduction	171
Human Immunodeficiency Virus	172
Human Immunodeficiency Virus Replication	172
Human Immunodeficiency Virus and Disease	174
Human Immunodeficiency Virus Transmission	175
Criteria for Diagnosis	177
Clinical Strategies for the Treatment of AIDS	177
Reverse Transcriptase Inhibitors	177
Human Immunodeficiency Virus Protease Inhibitors	186
Drugs Inhibiting Viral Binding	193
Drugs Stimulating the Immune Response	193
Future Anti-Human Immunodeficiency Virus Drugs	
Under Development	193
Combination Therapy for AIDS	194
Vaccines for HIV Infection	194
Bibliography	196
9 Regulatory T Cells and Disease State	203
Introduction	203
Types of Regulatory T Cells	204
Naturally Occurring Treg Cells	204
Peripheral (Adaptive) Treg Cells	207
Tr1 Cells	209
TH ₃ Cells	210
Natural Killer T Cells	211
Regulatory CD8 ⁺ T Cells	212
Regulatory T Cells in the Mucosal System	214
T-Cell Vaccination and Regulatory T Cells	214
Regulatory T Cells and Antibody Production	216
Mechanisms of Induction of Treg Cells	216

Antigen Specificity of Regulatory T Cells and Mechanisms of Suppression	217
Foxp3 Expression and Regulatory T-Cell Activity	217
Toll-Like Receptors and Regulatory T Cells	218
CTLA-4 and Regulatory T Cells	218
Regulatory T Cells and Disease States	219
Allergic Disease	219
Autoimmune Diseases	220
Infections	220
Cancer	222
Transplantation	222
Future Direction and Conclusion	222
Bibliography	223
10 Gene Therapy	227
Introduction	227
Altered Genes and Diseases of Inherited Disorders	228
Vectors for Gene Therapy	229
Adenoviruses	229
Adeno-Associated Virus	231
Retroviruses	231
Lentiviruses	233
Herpes Simplex Virus-1 Vector	233
Vaccinia Vectors	234
Amplicon-Based Vectors	234
Nonviral Gene Therapy Vectors	236
RNA Interference Gene Therapy	237
Gene Therapy Using RNA Aptamers	237
Treatment of Diseases by Gene Therapy	238
Cancer	238
Cystic Fibrosis	240
Vasculature	241
Cardiovascular Diseases	241
Human Immunodeficiency Virus	244
Hematopoietic Stem Cell as a Target for Gene Therapy	245
Epilepsy	245
Challenges Associated with Successful Gene Therapy	246
Conclusion	247
Bibliography	247
Index	253
