<b>Preface</b> .....	VII
<b>Nomenclature</b> .....	XIII
<b>1 Fundamental principles and processes</b> .....	1
1.1 Applications .....	2
1.2 Sign convention .....	3
1.3 Ideal refrigeration and liquefaction processes .....	4
1.3.1 Ideal constant-temperature refrigeration process .....	4
1.3.2 Ideal gas-cooling/liquefaction process .....	6
1.4 Exergy .....	8
1.5 Exergy loss and exergy efficiency .....	10
1.6 Exergy efficiency of processes without any work interaction .....	14
1.7 Performance of an ideal gas cooler operating with a non-ideal expander .....	16
1.8 Precooled ideal liquefaction process .....	17
1.9 Linde–Hampson refrigerators and liquefiers .....	18
1.10 Joule–Thomson coefficient .....	23
1.11 Exergy efficiency of a Linde–Hampson liquefier .....	26
1.11.1 Exergy losses in a non-ideal Linde–Hampson liquefier .....	27
1.12 Temperature profiles in heat exchangers operating with single phase fluids .....	28
1.13 Heat exchanger effectiveness .....	32
1.14 Exergy efficiency of the Solvay and Linde–Hampson liquefaction processes .....	37
1.15 The Kapitza liquefaction process and its variants .....	39
1.16 Pinch points .....	46
1.17 Types of refrigerant mixtures .....	49

<b>2</b>	<b>Simulation of cryogenic processes</b>	51
2.1	Sequential modular simulators	52
2.1.1	Example: Open-cycle Linde–Hampson nitrogen liquefier	52
2.1.2	Tearing of recycle streams	57
2.2	Equation-oriented simulators	57
2.3	Simultaneous modular simulators	58
2.4	Simulation of heat exchangers with pinch points	59
2.5	Optimization of a Kapitza nitrogen liquefier	62
<b>3</b>	<b>Need for refrigerant mixtures</b>	65
3.1	Refrigeration systems	65
3.2	Exergy efficiency of ideal Linde–Hampson refrigerators operating with refrigerant mixtures	72
3.3	Cooling of gases using mixed refrigerant processes	81
3.4	Linde gas cooler operating with mixtures	83
3.5	Liquefaction of natural gas	86
<b>4</b>	<b>Constant-temperature refrigeration processes</b>	89
4.1	Gas refrigerant supply and liquid refrigerant supply (GRS/LRS) processes	90
4.2	Linde–Hampson refrigerators operating with refrigerant mixtures	91
4.3	Mixed refrigerant Linde–Hampson refrigerator operating at 90 K in GRS mode	94
4.3.1	Effect of pressure drop in the heat exchanger	98
4.3.2	Effect of compressor discharge pressure	99
4.4	Mixed refrigerant Linde–Hampson refrigerator operating at 100 K in LRS mode	101
4.5	Effect of the addition of neon or helium	106
4.5.1	Mixed refrigerant Linde–Hampson refrigerator operating at 85 K in GRS mode with N <sub>2</sub> –He–HC mixtures	106
4.6	Effect of precooling	113
4.6.1	Precooled mixed refrigerant process refrigerator operating at 100 K	115
4.7	Mixed refrigerant process refrigerator with a phase separator	120
4.7.1	Mixed refrigerant process with a phase separator operating at 100 K	121
4.7.2	Effect of separation efficiency	124
4.8	Mixed refrigerant process refrigerators with multiple phase separators	126
4.9	Summary	127
<b>5</b>	<b>Optimum mixture composition</b>	129
5.1	Choice of mixture constituents	129
5.2	Optimization of mixture composition for refrigeration processes	131
5.2.1	Optimization methods proposed in the literature	131

5.2.2	Maximization of exergy efficiency .....	135
5.2.3	Design variables .....	136
5.2.4	Example: Linde–Hampson refrigerator operating in GRS mode at 92 K with a mixture of nitrogen, methane, ethane, and propane .....	136
5.3	Example: Linde–Hampson refrigerator operating in GRS mode at 80 K .....	140
5.4	Comparison of performance of a Linde–Hampson refrigerator operating in GRS mode at 92 K with mixtures obtained using the method of Dobak et al. [32] and the present method .....	142
5.5	Optimization of mixture composition and operating pressures of liquefaction processes .....	143
<b>6</b>	<b>Natural gas liquefaction processes .....</b>	<b>149</b>
6.1	Classification of natural gas liquefaction processes .....	150
6.2	Classical cascade processes .....	151
6.3	Assumptions .....	153
6.4	Single-stage mixed refrigerant LNG process without phase separators .....	154
6.5	Precooled LNG process without phase separators .....	164
6.6	LNG processes with a phase separator .....	170
6.7	Precooled LNG process with a phase separator .....	178
6.8	Propane precooled phase separator (C3-MR) process .....	184
6.9	Mixed refrigerant precooled phase separator (DMR) processes .....	189
6.10	LNG process with multiple phase separators (Kleemenko process) ..	199
6.11	Cascade liquefaction process operating with mixtures .....	205
6.12	LNG processes with turbines .....	212
6.13	Summary .....	219
<b>7</b>	<b>Cooling and liquefaction of air and its constituents .....</b>	<b>221</b>
7.1	Single-stage processes for the sensible cooling of a pure fluid such as nitrogen .....	222
7.2	Single-stage process for the liquefaction of pure fluids such as nitrogen .....	227
7.3	Mixed refrigerant precooled Linde–Hampson liquefaction process ..	231
7.4	Mixed refrigerant precooled Kapitza liquefaction process .....	235
7.5	Liquefaction of nitrogen using the Kleemenko process .....	241
7.6	Other liquefaction processes and refrigerants .....	248
7.7	Summary .....	249
	<b>References .....</b>	<b>251</b>
	<b>Index .....</b>	<b>257</b>
