

CONTENTS

Preface	vii
----------------------	-----

1: Equilibrium Thermodynamics

Introduction	1
1.1. Chemical Potentials and Activities	1
1.1.1. Thermodynamic Preliminaries. The Electrochemical Potential	2
1.1.2. The Interphase Equilibrium Condition	4
1.1.3. Electrochemical Potentials in Terms of Measurable Solution Variables: Introduction, and the Effect of Electrostatic Potential.....	5
1.1.4. The Gibbs–Duhem Equation	5
1.1.5. Dependence of the Chemical Potential on Pressure.....	6
1.1.6. Dependence of the Chemical Potential on Composition.....	7
1.1.7. Units	11
1.1.8. Activity and Activity Coefficient	12
1.2. Ion Equilibrium across Membranes.....	14
1.2.1. The Nernst Equilibrium	14
1.2.2. Origin of the Nernst Potential	15
1.2.3. Specific Ion Electrodes	17
1.2.4. Activity Coefficient Considerations	17
1.2.5. The Donnan Equilibrium	19
1.3. Chemical Equilibrium.....	21
Problems.....	24

2: Free Diffusion

Introduction	29
2.1. Free Diffusion of Nonelectrolytes	30
2.1.1. The Teorell Equation	30
2.1.2. Integration of the Teorell Equation; Fick's First Law; Solute Permeability.....	31
2.1.3. Unstirred Layers	36
2.1.4. Applications of Solution Theory.....	38
2.1.5. Fick's Second Law and Convective Diffusion	40
2.1.6. Justification of the Steady-State Assumption: Time Scales in Biological Transport.....	41
2.2. Free Diffusion of Electrolytes	43
2.2.1. Differences between Electrolyte and Nonelectrolyte Diffusion	43
2.2.2. The Electrodifusion Equation.....	44
2.2.3. Integration of the Electrodifusion Equation	47

2.2.4. Some Special Cases	49
Equilibrium	49
Uniform Composition	50
Diffusion Potential of a Bi-Ionic System	51
Active and Passive Exchange with a Closed Compartment	52
Equal Total Concentrations on the Two Sides of the Membrane: The Constant-Field Equation	53
2.2.5. Ionic Permeability and the Resting Potential of the Cell	57
2.2.6. Charged Membranes	59
2.2.7. Limitations of the Electrodiffusion Equation and Its Solutions	61
Problems	62

3: The Cell

Introduction	67
3.1. Overview	67
3.2. The Structure of an Animal Cell	68
3.2.1. Composition and Structure of the Plasma Membrane	68
Heterogeneity of Cell Membranes	68
The Mosaic Model of the Plasma Membrane	72
The Glycocalyx and Surface Charge	74
3.2.2. The Internal Structure of the Cell	75
3.3. Metabolism: The Production of ATP	78
3.4. Intracellular Transport	84
3.4.1. Intracellular Diffusion	84
3.4.2. Protein Transport	87
Transport into the Nucleus	87
Transport into the Mitochondrion	88
3.4.3. Vesicular Transport	90
Endocytosis	91
Exocytosis, Secretion and Transcytosis	95
3.5. Cellular Motility and Locomotion	100
3.5.1. Actin-Based Movement and Chemotaxis	100
3.5.2. Cilia and Flagella	105
Problems	107

4: Facilitated Diffusion: Channels and Carriers

Introduction	111
4.1. Mechanisms of Channels and Carriers	112
4.1.1. Hallmarks of Mediated Transport	112
4.1.2. Ion Selectivity of Channels	114
4.1.3. Energetics of Ion Selectivity, and Steric Effects	116
4.1.4. Ion Selectivity of Channels: Summary	119
4.1.5. The Structure of Ion Channels: Selectivity Filters, Gates, and Energy Profiles	120

4.1.6.	Regulation of the Gating Process.....	122
4.1.7.	Classification of Ion Channels. Aquaporins and Gap Junctions	131
4.1.8.	Carrier Models	137
4.1.9.	Carriers and Channels: Convergences and Differences	139
4.2.	Kinetics of Facilitated Transport	141
4.2.1.	Models of Ion Channel Transport: Overview	141
4.2.2.	Energy Barrier and Binding Models of Channel Transport	143
	Ionic Independence: Absolute Rate Theory	143
	Saturable Channels: Kinetic Analysis.....	146
4.2.3.	The Patch Clamp and Two Applications	151
	Acetylcholine Receptor Channel Kinetics	152
	Voltage and Current Sensitivity of a Voltage-Activated Sodium Channel	154
4.2.4.	Stochastic Properties of Channels: Membrane Noise Analysis	158
4.2.5.	The Simplest Model of Carrier Transport: Assumptions	161
4.2.6.	The Simplest Model of Carrier Transport: Equations.....	162
4.2.7.	Monosaccharide Transport in the Erythrocyte.....	165
4.2.8.	More Complex Carrier Models	166
4.2.9.	Exchangers and Cotransporters.....	170
4.3.	Inhibition of Facilitated Transport.....	174
4.3.1.	Inhibition of Channel Transport: Channel Block.....	174
4.3.2.	Inhibition of Carrier Transport	175
	Problems.....	179

5: Active Transport

	Introduction	185
5.1.	Active Transport: General Considerations	186
	5.1.1. Metabolic Coupling and Affinity.....	186
	5.1.2. Classification of Active Transport Processes.....	188
	5.1.3. Identification of Active Transport Processes	190
5.2.	Mechanisms of Active Transport.....	190
	5.2.1. Scalar Active Transport: Overview	191
	5.2.2. Primary Scalar Transport.....	192
	5.2.3. Secondary Scalar Transport.....	193
	Cotransport	195
	Countertransport	197
	5.2.4. Vectorial Active Transport, the Curie Theorem and Substrate Activation.....	199
	5.2.5. Sodium–Potassium Exchange.....	202
	5.2.6. Pump Selectivity and Other Properties Shared with Passive Carriers	204
5.3.	Kinetics of Active Transport	205
	5.3.1. A Simple Secondary Scalar Transport Model: Assumptions.....	206
	5.3.2. A Simple Secondary Scalar Transport Model: Equations.....	208
	5.3.3. More Complex Symport Models; the Sodium/Glucose Transporter.....	209
	5.3.4. Primary Scalar Transport.....	213
	5.3.5. Flux Equations for Primary Scalar Transport	214

5.3.6.	Relation between the Coupling Parameter Γ and the Affinity of the Metabolic Reaction	215
5.3.7.	Vectorial Active Transport and the Nature of Na–K Exchange.....	216
5.3.8.	Pumps and Leaks	216
Problems.....		220

6: Nonequilibrium Thermodynamics

Introduction	225
6.1. The Basic Phenomenological Equations.....	225
6.1.1. Conjugate Forces and Fluxes.....	225
6.1.2. Phenomenological Coefficients and Linear Thermodynamics	227
6.1.3. Frictional Interpretation of the Phenomenological Equations.....	229
6.1.4. A Cautionary Note before Proceeding.....	230
6.2. Nonequilibrium Thermodynamic Description of Passive Transport	231
6.2.1. Setting the Stage	231
6.2.2. The Chemical Potential of the Solvent	232
6.2.3. A New Set of Forces and Fluxes; Osmotic Pressure.....	234
6.2.4. The Kedem–Katchalsky Equations.....	235
6.2.5. Physical Significance of the Reflection Coefficient: Semipermeable Membranes and the Osmometer, Steric Effects and Sieving.....	237
6.2.6. Osmotic Pressure of Solutions; Donnan Osmotic Pressure; Osmotic Effects on Cells	242
6.2.7. Passive Transport of Multiple Nonelectrolytes.....	246
6.2.8. Passive Transport of Electrolytes: Electrokinetic Phenomena.....	247
6.3. Nonequilibrium Thermodynamic Description of Active Transport.....	248
6.3.1. Definition of Active Transport	248
6.3.2. Coupling between Nonconjugate Forces and Fluxes.....	250
6.3.3. Nonequilibrium Thermodynamics of Motor Proteins and ATP Synthase.....	252
6.4. Limitations of Nonequilibrium Thermodynamics	254
6.4.1. Closeness to Equilibrium: A Limitation Intrinsic to Linearized Nonequilibrium Thermodynamics	254
6.4.2. The Concentration Dependence of the Phenomenological Coefficients.....	257
6.4.3. Closeness to Equilibrium in Biological Systems	258
6.4.4. The Information Content of Nonequilibrium Thermodynamics	259
6.4.5. Approximations in the Derivation of the Kedem–Katchalsky Equations	260
Problems.....	261

7: Models of Transport across Cell Membranes

Introduction	265
7.1. Transport across the Lipid Bilayer of Cell Membranes.....	265
7.1.1. Evidence for Nonelectrolyte Diffusion across the Lipid Bilayer.....	266
7.1.2. A Simple Model of Transbilayer Diffusion	267

7.1.3.	Potential Barriers in the Bilayer.....	269
7.2.	Models of Transport through Pores	270
7.2.1.	Classification of Pore Transport Models	271
7.2.2.	Hydraulic Conductivity of a Pore	272
7.2.3.	Hindered Diffusion; Solute Permeability as a Probe of Pore Radius.....	273
7.2.4.	Other Factors Affecting Estimated Pore Size; The Equivalent Pore.....	276
7.2.5.	Hindered Convection (Sieving); the Reflection Coefficient as a Probe of Pore Radius	279
7.2.6.	Combined Diffusion and Convection through Pores	282
7.2.7.	Single-File Transport through Pores	283
7.2.8.	The Permeability Ratio of Larger Pores	287
7.3.	Electrical Analogs.....	289
7.3.1.	Equivalent Circuit for the Passive Flux of a Single Ion.....	289
7.3.2.	Equivalent Circuit for the Passive Transport of Multiple Ions	290
7.3.3.	The Electrical Analog of a Rheogenic Pump.....	293
7.3.4.	Some Final Remarks.....	294
	Problems.....	295

8: Regulation and Feedback

	Introduction	299
8.1.	Regulation <i>of</i> Transport	301
8.1.1.	Receptor-Mediated Second Messenger Systems: Cyclic AMP and Antidiuretic Hormone.....	301
8.1.2.	Direct Hormonal Regulation without an Extracellular Receptor: Aldosterone	306
8.1.3.	Calcium-Based Regulation	307
	Maintenance of a Low Cytosolic Calcium Concentration	307
	Calcium Signaling	307
	Calcium Handling in Cells and Compartmental Analysis	309
8.2.	Feedback in Transport Systems: Insulin.....	315
8.3.	Regulation <i>by</i> Transport	317
8.3.1.	Regulation of Cell Volume	317
8.3.2.	Regulation of Cell pH.....	322
	Problems.....	325
	Appendix 8.1. Nonequilibrium Binding in Compartmental Analysis	327

9: Excitable Cells

	Introduction	329
9.1.	Nerve	330
9.1.1.	The Resting Neuron.....	331
9.1.2.	The Action Potential: Electrical Aspects	333
	The Membrane Action Potential: Resting State.....	335
	Hodgkin and Huxley's Equations for the Dependence of Conductance on Membrane Potential	337
	Excitation of the Membrane Action Potential.....	340

	The Propagating Action Potential: Cable Theory	343
	The Role of Myelin.....	347
9.1.3.	The Action Potential: Molecular Aspects	349
	Hodgkin and Huxley's Channel Model	349
	More Recent Models of the Potassium and Sodium Channels of Nerve	353
9.1.4.	Synaptic Transmission	359
9.2.	Muscle	367
9.2.1.	The Resting Muscle Fiber.....	368
9.2.2.	Excitation and Excitation–Contraction Coupling	370
	Neuromuscular Transmission and Excitation: The Acetylcholine Receptor	370
	Excitation–Contraction Coupling	378
9.2.3.	Molecular Mechanisms of Muscle Contraction	382
Problems.....		387

10: Epithelial Transport

Introduction	391
10.1. Organization of Epithelial and Endothelial Cell Layers and Some Consequences	392
10.1.1. The Organization of Epithelial and Endothelial Cell Layers	392
10.1.2. The Pathways across Leaky and Tight Epithelia	395
10.1.3. Transport in a Parallel Path System	400
10.1.4. Coupling of Transepithelial Water Flow to Active Ion Transport	405
The Curran Model.....	405
The Standing Gradient Model.....	407
The Sodium Recirculation Model	410
The Cotransporter Hypothesis	411
10.1.5. The Effect of Unstirred Layers on Transepithelial Diffusion and Osmosis: Concentration Polarization	412
10.1.6. Electrical Analogs of Cell Layers	414
10.2. Examples of Epithelial and Endothelial Function	418
10.2.1. Absorption	419
Absorption of Sugars in the Small Intestine	419
Transport of Water and Sodium in the Proximal Tubule of the Kidney	422
Transport of Water and Sodium in the Distal Tubule of the Kidney	427
10.2.2. Secretion	430
10.2.3. Filtration	434
Problems	439
Appendix 10.1. Convection, Diffusion and Mass Addition in Channel Geometries	443

11: Gas Transport

Introduction	447
11.1. Partial Pressure and the Equations for Gas Flux.....	448

11.2.	Overview of the Gas Transport Process	449
11.3.	Gas Exchange in the Lung.....	453
11.4.	Oxygen Transport in the Blood	455
11.5.	Transport from Red Blood Cells to Tissue	456
11.5.1.	Reaction–Diffusion Processes	459
11.5.2.	The Krogh Tissue Cylinder.....	461
11.5.3.	Modifications to the Basic Krogh Model.....	462
11.5.4.	Beyond the Krogh Cylinder.....	468
Problems.....		480
