List of Tables	xxvii
List of Figures	xxxi

Part I Distribution Theory and Applications

1 Enrique Castillo's Contributions to Conditional Specification

<i>Barry C. Arnold</i>	3
1.1 Introduction	3
1.2 Conditionals in Given Exponential Families	4
1.3 Conditionals in Given Non-Exponential Families	8
1.4 Truncated and Weighted Distributions	9
1.5 A Digression on Improper Models	9
1.6 Characterizations of Classical Models Via Conditional Specifications ..	10
1.7 Back to the Bayesian Scenario	10
1.8 Inference for Conditionally Specified Models	11
1.9 Incomplete and Imprecise Conditional Specification	11
1.10 Future Prospects	17
References	17

2 The Polygonal Distribution

<i>Dimitris Karlis and Evdokia Xekalaki</i>	21
2.1 Introduction	21
2.2 The Triangular Distribution	22
2.3 The Polygonal Distribution	23
2.3.1 Estimation	25
2.4 The Polygonal Distribution as a Mixing Density	26
2.4.1 The binomial–triangular distribution	26
2.4.2 An application	28
2.4.3 The negative binomial–triangular distribution	30
2.5 Discussion	32
References	32

3 Conditionally Specified Models: New Developments and Applications

<i>José María Sarabia, María Sarabia, and Marta Pascual</i>	35
3.1 Introduction	35
3.2 Bivariate Power Conditionals Distribution	36
3.2.1 Bivariate Poisson conditionals distribution	36
3.2.2 Bivariate binomial conditionals distribution	37
3.2.3 A general class	37
3.3 Mixture Conditional Models with Applications to Actuarial Statistics	38
3.4 Bivariate Income Distributions	39
3.5 Flexible Conjugate Prior Families	39
3.5.1 Hurdle count data models: Bayesian analysis	40
3.5.2 Estimating with incomplete count data	40
3.6 Conditional Hazard Functions	41
References	42

4 Modelling of Insurance Claim Count with Hurdle Distribution for Panel Data

<i>Jean-Philippe Boucher, Michel Denuit, and Montserrat Guillén</i>	45
4.1 Introduction	45
4.1.1 Data used	46
4.2 Cross Section versus Panel Data	47
4.2.1 Modelling	47
4.3 Poisson Distribution	48
4.3.1 Overview	48
4.3.2 Panel data	48
4.4 Hurdle Models	49
4.4.1 Overview	49
4.4.2 Panel data	52
4.5 Predictive Distribution	53
4.5.1 Poisson	53
4.5.2 Hurdle	54
4.5.3 Linear credibility	55
4.6 Insurance Application	55
4.6.1 Estimations	55
4.6.2 Premiums	56
4.7 Conclusion	58
References	58

5 Distance-Based Association and Multi-Sample Tests for General Multivariate Data

<i>Carles M. Cuadras</i>	61
5.1 Introduction	61
5.2 Multivariate Association	62
5.2.1 Example of multivariate association	63
5.3 The Proximity Function	64
5.4 The Distance-based Bayes Allocation Rule	65
5.5 Multivariate Multiple-Sample Tests	66
5.5.1 Partitioning the geometric variability	66

5.5.2 Tests with principal coordinates	67
5.5.3 Tests with proximity functions	68
5.5.4 Multivariate dispersion	69
5.5.5 Examples of multi-sample tests	69
References	70

Part II Probability and Statistics

6 Empirical Bayes Assessment of the Hyperparameters in Bayesian Factor Analysis

<i>S. James Press, Key-II Shin, and Lee Sang Eun</i>	75
6.1 Introduction	75
6.2 The BFA Model	76
6.3 Assessing the Hyperparameters	77
6.3.1 Assessment of Λ_0	77
6.3.2 Assessment of minimal ν	78
6.3.3 Assessment of B	78
6.3.4 Assessment of H	78
6.3.5 Iterative computation of the hyperparameters	79
6.4 Bayesian Estimation of Λ, F, Ψ	79
6.5 Example	81
6.6 Method Comparison and Summary	84
References	85

Part III Order Statistics and Analysis

7 Negative Mixtures, Order Statistics, and Systems

<i>Jorge Navarro and Pedro J. Hernández</i>	89
7.1 Introduction	89
7.2 Relationships between Mixtures and Systems	90
7.3 Properties of Mixtures and Systems	92
7.4 The Bridge Structure	95
Appendix	98
References	99

8 Models of Ordered Data and Products of Beta Random Variables

<i>Eric Beutner and Udo Kamps</i>	101
8.1 Introduction	101
8.2 Intermediate Order Statistics and the Ordered Dirichlet Distribution ..	103
8.3 Properties of Fractional Order Statistics	105
References	106

9 Exact Inference and Optimal Censoring Scheme for a Simple Step-Stress Model Under Progressive Type-II Censoring

<i>Qihao Xie, N. Balakrishnan, and Dong-hoon Han</i>	107
9.1 Introduction	107
9.2 Model Description and MLEs	109

9.3	Conditional Distributions of the MLEs	111
9.4	Confidence Intervals	117
9.4.1	Exact confidence intervals	117
9.4.2	Asymptotic confidence intervals	118
9.4.3	Bootstrap confidence intervals	118
9.5	Simulation Study	121
9.6	Optimal Censoring Scheme	121
9.7	Illustrative Examples	123
9.8	Conclusions	125
	Appendix: Tables and Figures	126
	References	136

Part IV Engineering Modeling

10 Non-Gaussian State Estimation in Power Systems

	<i>Roberto Mínguez, Antonio J. Conejo, and Ali S. Hadi</i>	141
10.1	Introduction	141
10.2	Maximum Likelihood Estimation	142
10.3	Transformation of Random Variables	143
10.3.1	Rosenblatt transformation	144
10.3.2	Nataf transformation	144
10.3.3	Orthogonal transformation of normal random variables	145
10.4	The Transformed Likelihood Estimation Problem	146
10.5	General State Estimation (GSE) Formulation	147
10.5.1	Independent gaussian probability density function	147
10.5.2	Dependent gaussian probability density function	148
10.5.3	Dependent non-gaussian probability density function	148
10.6	Bad Data Detection	148
10.7	Illustrative Example	148
10.7.1	Statistical assumptions	149
10.8	Conclusions	154
	References	155

11 Statistics Applied to Wave Climate on a Beach Profile

	<i>Carmen Castillo and Cristina Solares</i>	157
11.1	Introduction	157
11.2	Offshore Wave Climate	158
11.3	Local Wave Height Description	161
11.3.1	Conditional probabilities	161
11.3.2	Absolute probabilities	163
11.4	Consecutive Wave Heights	164
11.5	Maximum Wave Height	166
11.5.1	Conditional probabilities	166
11.5.2	Absolute probabilities	167
11.6	Conclusions	168
	References	168

Part V Extreme Value Theory

12 On Some Dependence Measures for Multivariate Extreme Value Distributions

<i>Ishay Weissman</i>	171
12.1 Introduction	171
12.2 Dependence Coefficients	172
12.3 Examples	174
12.4 Relation between τ_1 and τ_2	176
12.5 Combining Two Independent Models	179
References	180

13 Ratio of Maximum to the Sum for Testing Super Heavy Tails

<i>Cláudia Neves and Isabel Fraga Alves</i>	181
13.1 Introduction	181
13.2 Main Results	183
13.3 Simulation Results and Real Data Analysis	184
13.4 Auxiliary Results	188
13.5 Proofs	189
References	193

14 Tail Behaviour: An Empirical Study

<i>M. Ivette Gomes, Dinis Pestana, Lúgia Rodrigues, and Clara Viseu</i>	195
14.1 Introduction	195
14.2 Asymptotic CI's for the Tail Index and the VaR	197
14.3 Reduced Bias Tail Index and Quantile Estimators	198
14.3.1 Tail index estimation	198
14.3.2 Asymptotic CI's for γ based on second order reduced-bias tail index estimation	199
14.3.3 Adaptive choice of the level for reduced-bias estimators	199
14.3.4 Extreme quantile or VaR estimation	200
14.3.5 Asymptotic CI's for VaR_p on the basis of reduced-bias estimators	200
14.4 An Algorithm for Semi-Parametric Tail Estimation	200
14.5 The Use of a Parametric Quantile Method in Tail Index and Quantile Estimation	201
14.6 Financial Data Analysis	203
14.6.1 Second order parameter estimation	203
14.6.2 Tail index and VaR_p estimation	203
14.6.3 Graphical illustration of the adaptive threshold choice for tail index and VaR estimation	204
14.6.4 The use of a percentile method in quantile estimation	205
References	206

15 An Example of Real-Life Data Where the Hill Estimator is Correct

<i>Rolf-Dieter Reiss and Ulf Cormann</i>	209
15.1 Introduction	209
15.2 The Pareto Modeling	210

15.3	The Hill Estimator	211
15.4	Modified Pickands Estimators	212
15.5	Analyzing the Long Term Copepod Data	213
15.5.1	The data set	213
15.5.2	Parametric estimates for the copepod data	213
15.5.3	Median excess functions	214
15.6	Computational Aspects	215
	References	215

Part VI Business and Economics Applications

16 Deriving Credibility Premiums Under Different Bayesian Methodology

<i>Emilio Gómez Déniz</i>	219
16.1 Introduction	219
16.2 Classical Model of Bühlmann	221
16.3 Standard Bayesian Credibility	222
16.4 Credibility Based on Robust Bayesian Analysis	223
16.5 Beyond the Loss Function	226
16.6 Discussion	228
References	228

17 The Influence of Transport Links on Disaggregation and Regionalization Methods in Interregional Input-Output Models Between Metropolitan and Remote Areas

<i>Fernando Escobedo and Jose M. Ureña</i>	231
17.1 Introduction	231
17.2 Methodology	232
17.3 Results and Discussion	236
17.4 Conclusions	240
References	240

Part VII Statistical Methods

18 Jackknife Bias Correction of a Clock Offset Estimator

<i>Daniel R. Jeske</i>	245
18.1 Introduction	245
18.2 Candidate Clock Offset Estimators	247
18.2.1 Paxson's estimator	247
18.2.2 Bootstrap bias-correction	247
18.2.3 Jackknife bias-correction	248
18.3 Mean Squared Error Under Exponential and Pareto Distributions	248
18.3.1 Exponential distribution	248
18.3.2 Pareto distribution	249
18.4 Additional Mean Squared Error Comparisons via Simulation	250
18.4.1 Lognormal, gamma and Weibull distribution	250
18.4.2 Heavy tailed distributions	252

18.5 Summary	253
References	254

19 Pretesting in Polytomous Logistic Regression Models Based on Phi-divergence Measures

<i>Leandro Pardo, María Luisa Menéndez, and Nirian Martín</i>	255
19.1 Introduction	255
19.2 Preliminaries and Notation	257
19.3 Contiguous Alternative Hypotheses	259
19.4 Asymptotic Distributional Quadratic Risk of $\hat{\beta}_{\phi_2}$, $\hat{\beta}_{\phi_2}^{H_0}$ and $\hat{\beta}_{\phi_1, \phi_2}^{pre}$	262
19.5 Comparison of $\hat{\beta}_{\phi_2}$, $\hat{\beta}_{\phi_2}^{H_0}$ and $\hat{\beta}_{\phi_1, \phi_2}^{pre}$	264
References	265

20 A Unified Approach to Model Selection, Discrimination, Goodness of Fit and Outliers in Time Series

<i>Daniel Peña and Pedro Galeano</i>	267
20.1 Introduction	267
20.2 Estimating ARMA Time Series Models	268
20.3 Quadratic Discrimination of ARMA Time Series Models	269
20.4 Goodness of Fit for ARMA Time Series Models	271
20.5 Outliers in ARMA Time Series Models	273
References	277

21 Generalized Linear Models Diagnostics for Binary Data using Divergence Measures

<i>J. A. Pardo and M. C. Pardo</i>	279
21.1 Introduction	279
21.2 Checking Goodness-of-fit	281
21.3 Simulation Study	283
21.4 “Outlying” Detection Procedures	285
References	288

Part VIII Applied Mathematics

22 Some Problems in Geometric Processing of Surfaces

<i>Jaime Puig-Pey, Akemi Gálvez, Andrés Iglesias, Pedro Corcuera, and José Rodríguez</i>	293
22.1 Introduction	293
22.2 Mathematical Preliminaries	294
22.3 Helical Curves on Surfaces	296
22.3.1 Implicit surfaces	297
22.3.2 Parametric surfaces	297
22.4 Silhouette Curve on a Surface	299
22.4.1 Surface in implicit form	299
22.4.2 Surfaces in parametric form	301
22.5 Conclusions and Further Remarks	302
References	303

23 Generalized Inverse Computation Based on an Orthogonal Decomposition Methodology	
<i>Patricia Gómez, Beatriz Lacruz, and Rosa Eva Pruneda</i>	305
23.1 Introduction	305
23.2 Generalized Inverse	306
23.3 The Algorithm to Obtain a Generalized Inverse	307
23.4 Generalized Inverse Updating Algorithm	309
23.5 Least Squares Estimation for Less than Full Rank Models	312
23.6 Conclusions	315
References	315
24 Single and Ensemble Fault Classifiers Based on Features Selected by Multi-Objective Genetic Algorithms	
<i>Enrico Zio, Piero Baraldi, Giulio Golam, and Nicola Pedroni</i>	317
24.1 Introduction	317
24.2 Feature Selection for Pattern Classification	318
24.2.1 An overview of feature selection techniques	319
24.3 GA-based Feature Selection for Pattern Classification	320
24.4 Classification of Transients in the Feedwater System of a Boiling Water Reactor	322
24.5 The Ensemble Approach to Pattern Classification	323
24.5.1 The construction of the ensemble	323
24.5.2 Integration of class assignments	324
24.6 Application to Multiple Fault Classification	326
24.7 Conclusions	327
References	328
25 Feasibility Conditions in Engineering Problems Involving a Parametric System of Linear Inequalities	
<i>Cristina Solares and Eduardo W. V. Chaves</i>	331
25.1 Introduction	331
25.2 The Heat Transfer Problem	332
25.3 A Fracture Mechanical Problem	335
25.4 The Beam Problem	336
25.5 Conclusions	340
References	340
26 Forecasting Nonlinear Systems with Neural Networks via Anticipated Synchronization	
<i>Sixto Herrera, Daniel San-Martín, Antonio S. Cofiño, and José M. Gutiérrez</i>	341
26.1 Introduction	341
26.2 Anticipated Synchronization	342
26.3 Nonlinear Time Series Modeling with Neural Networks	345
26.4 Error Growth in Synchronized Chains	347
26.5 Conclusions	349
References	349

Part IX Discrete Distributions

27 The Discrete Half-Normal Distribution	
<i>Adrienne W. Kemp</i>	353
27.1 Introduction	353
27.2 The Maximum Entropy Derivation	354
27.3 The Limiting q -hyper-Poisson-I Derivation	355
27.4 The Morse M/M/1 Queue with Balking	355
27.5 Success Run Processes	356
27.6 Mixed Heine Distribution	357
27.7 Properties	358
References	359
28 Parameter Estimation for Certain q-Hypergeometric Distributions	
<i>David Kemp</i>	361
28.1 Introduction	361
28.2 Special Cases and Properties	362
28.3 Estimation	364
References	365
Index	367

Advances in Mathematical and Statistical Modeling

Arnold, B.C.; Balakrishnan, N.; Sarabia Alegria, J.M.;

Minguez, R. (Eds.)

2008, XXXIV, 368 p. 56 illus., Hardcover

ISBN: 978-0-8176-4625-7

A product of Birkhäuser Basel
