

# Table of Contents

## VOLUME 1

<b>1 Basic Concepts – Scattering and Time Correlation Functions</b> .....	<b>1</b>
<i>R. Pecora</i>	
<b>1 Introduction</b> .....	<b>3</b>
<b>2 Basic Scattering Theory – Interference</b> .....	<b>3</b>
<b>3 Fundamentals of Time Correlation Functions</b> .....	<b>7</b>
3.1 Stochastic (Random) Functions or “Signals” .....	8
3.2 Time Averages .....	8
3.3 Some Properties of Time Autocorrelation Functions .....	10
3.4 Ensemble-Averaged Time Correlation Functions .....	12
3.5 Spectral Densities of Time Correlation Functions .....	14
<b>4 Correlation Functions for Number Densities in Fluids</b> .....	<b>15</b>
4.1 Spatial Fourier Transforms .....	15
4.2 Local Density and Its Fourier Transform .....	16
4.3 Space Time Correlation Function of the Local Density .....	16
4.4 The Van Hove Space Time Correlation Function .....	17
4.5 The Self Correlation Function .....	18
4.6 Physical Interpretation, Limiting Values and the Radial Distribution Function .....	18
4.7 The Structure Factor .....	19
4.8 Dynamic Scattering Experiments .....	20
4.9 Space Time Correlation Functions for Perfect Gases .....	20
<b>5 The Translational Self-Diffusion Model</b> .....	<b>23</b>
5.1 Derivation of the Diffusion Equation .....	23
5.2 Random Walk .....	25
5.3 Solution of the Diffusion Equation for $G_s(\vec{r}, t)$ .....	26
5.4 Solution of Partial Differential Equations .....	26

5.5	Expression for the Diffusion Coefficient .....	28
5.6	The Langevin Equation .....	29
5.7	The Stokes-Einstein Relation .....	30
<b>6</b>	<b><i>More Refined Models for Motions in Liquid</i></b> .....	<b>31</b>
6.1	Translational Motion of Small Molecules in Liquids – The Gaussian Approximation .....	31
6.2	Molecular Dynamics Simulations .....	32
6.3	Molecular Dynamics Test of the Gaussian Approximation .....	33
6.4	Molecular Dynamics Tests of the Stokes – Einstein Relation for Hard Sphere Fluids .....	33
6.5	Long-Time Tails in the Velocity Autocorrelation Function .....	34
6.6	Diffusion in Quasi-Two Dimensional Systems .....	34
<b>7</b>	<b><i>Macromolecular and Colloidal Dispersions</i></b> .....	<b>35</b>
7.1	The Hydrodynamic Radius .....	35
7.2	Relations between D and Molecular Dimensions for Nonspherical Particles .....	36
7.3	Non-Dilute Dispersions .....	37
<b>8</b>	<b><i>Conclusion</i></b> .....	<b>38</b>
<b>2</b>	<b>Total Intensity Light Scattering from Solutions of Macromolecules</b> .....	<b>41</b>
	<i>G. C. Berry</i>	
<b>1</b>	<b><i>Introduction</i></b> .....	<b>43</b>
<b>2</b>	<b><i>General Relations</i></b> .....	<b>46</b>
<b>3</b>	<b><i>Scattering at Infinite Dilution and Zero Scattering Angle</i></b> .....	<b>49</b>
3.1	The Basic Relation .....	49
3.2	Identical Scattering Elements .....	50
3.3	Optically Diverse Scattering Elements .....	51
3.4	Optically Anisotropic Scattering Elements .....	53
3.5	Scattering Beyond the RGD Regime .....	55
<b>4</b>	<b><i>Scattering at Infinite Dilution and Small <math>q</math></i></b> .....	<b>57</b>
4.1	The Basic Relation .....	57
4.2	Identical Scattering Elements .....	57
4.3	Optically Diverse Scattering Elements .....	62
4.4	Optically Anisotropic Scattering Elements .....	64
4.5	Scattering Beyond the RGD Regime .....	66

<b>5</b>	<b><i>Scattering at Infinite Dilution and Arbitrary <math>q</math></i></b>	<b>68</b>
5.1	The Basic Relation	68
5.2	Identical Scattering Elements	68
5.3	Optically Diverse Scattering Elements	79
5.4	Optically Anisotropic Scattering Elements	81
5.5	Scattering Beyond the RGD Regime	82
<b>6</b>	<b><i>Scattering from a Dilute Solution at Zero Scattering Angle</i></b>	<b>85</b>
6.1	The Basic Relation	85
6.2	Monodisperse Solute, Identical Optically Isotropic Scattering Elements	87
6.3	Heterodisperse Solute, Identical Optically Isotropic Scattering Elements	89
6.4	Optically Diverse, Isotropic Scattering Elements	92
6.5	Optically Anisotropic Scattering Elements	94
<b>7</b>	<b><i>Scattering from Non Dilute Solution at Zero Scattering Angle</i></b>	<b>94</b>
7.1	The Basic Relation	94
7.2	Low Concentrations: the Third Virial Coefficient	95
7.3	Concentrated Solutions	96
7.4	Moderately Concentrated Solutions	100
<b>8</b>	<b><i>Scattering Dependence on <math>q</math> for Arbitrary Concentration</i></b>	<b>104</b>
8.1	The Basic Relation	104
8.2	Dilute to Low Concentrations	105
8.3	Concentrated Solutions	106
8.4	Moderately Concentrated Solutions	107
8.5	Behavior for a Charged Solute	112
<b>9</b>	<b><i>Special Topics</i></b>	<b>114</b>
9.1	Intermolecular Association in Polymer Solutions	114
9.2	Intermolecular Association in Micelle Solutions	118
9.3	Online Monitoring of Polymerization Systems	119
<b>3</b>	<b>Disordered Phase and Self-Organization of Block Copolymer Systems</b>	<b>133</b>
	<i>C. Giacomelli &amp; R. Borsali</i>	
<b>1</b>	<b><i>Introduction</i></b>	<b>135</b>
<b>2</b>	<b><i>Disordered Phase</i></b>	<b>136</b>
2.1	RPA: Historical Sketch and Theoretical Developments	136
2.2	Experimental Evidence	141

2.3	Results and Discussion .....	143
2.4	Elastic Scattering .....	147
2.5	Dynamic Structure Factors .....	154
2.6	Extension to the Diblock Copolymer in the Melt Case .....	159
<b>3</b>	<b><i>Self-organization of Block Copolymers</i></b> .....	<b>160</b>
3.1	Self-Assembly in Bulk .....	162
3.2	Self-Assembly in Solution .....	168
<b>4</b>	<b><i>Conclusion</i></b> .....	<b>183</b>
<b>4</b>	<b>Small-Angle Scattering from Surfactants and Block Copolymer Micelles</b> .....	<b>191</b>
	<i>J. S. Pedersen</i>	
1	<i>Introduction</i> .....	192
2	<i>Thermodynamics and Packing Parameters</i> .....	194
3	<i>Scattering from Surfactant Micelles</i> .....	196
3.1	Basic Expressions and Homogeneous Models .....	196
3.2	Globular Core-Shell Micellar Models .....	203
3.3	Cylindrical Elongated and Disk-Like Core-Shell Micelles .....	207
3.4	Long Cylindrical and Worm-Like Micelles .....	208
4	<i>Block Copolymer Micelles</i> .....	217
4.1	Models with Non-Interacting Gaussian Chains .....	218
4.2	Models with Interacting Excluded-Volume Chains .....	219
4.3	Calculation of Radial Profiles .....	225
5	<i>Summary and Outlook</i> .....	227
<b>5</b>	<b>Brush-Like Polymers</b> .....	<b>235</b>
	<i>Y. Nakamura &amp; T. Norisuye</i>	
1	<i>Introduction</i> .....	236
2	<i>Theoretical Models for Brush-Like Polymers</i> .....	238
2.1	Rigid Cylinders .....	239
2.2	WormLike Cylinders .....	242
2.3	Gaussian Brushes .....	252
2.4	Semi-Flexible Brushes .....	256

<b>3</b>	<b><i>Comparison Between Theory and Experiment</i></b>	<b>260</b>
3.1	Polymacromonomers	260
3.2	Combs and Centipedes	279
<b>6</b>	<b>Polyelectrolytes-Theory and Simulations</b>	<b>287</b>
	<i>C. Holm</i>	
1	<i>Introduction</i>	288
2	<i>The Cell Model</i>	289
3	<i>Solutions of the Cell Model</i>	292
3.1	Specification of the Cell Model	292
3.2	Poisson–Boltzmann Theory	294
3.3	Solution of the Poisson–Boltzmann Equation for the Cylindrical Case	295
3.4	Manning Condensation	297
3.5	Limiting Laws of the Cylindrical PB-Solution	297
4	<i>Additional Salt: The Donnan Equilibrium</i>	299
5	<i>Beyond PB</i>	302
5.1	Simulations of Osmotic Coefficients and Counterion Induced Attractions	304
5.2	Simulations of Rods of Finite Length	307
6	<i>Simulations of Polyelectrolyte Solutions in Good Solvent</i>	312
7	<i>Polyelectrolytes in Poor Solvent</i>	314
7.1	Introduction	314
7.2	Pearl-Necklace Conformation	315
7.3	Simulations	317
8	<i>Polyelectrolyte Networks</i>	325
8.1	Conformation in Poor Solvent	328
9	<i>Summary</i>	329
<b>7</b>	<b>Dynamic Light Scattering</b>	<b>335</b>
	<i>B. Chu</i>	
1	<i>Introduction</i>	336
1.1	Static Light Scattering	336

1.2	Dynamic Light Scattering and Laser Light Scattering .....	336
1.3	Laser Light Scattering and X-Ray/Neutron Scattering .....	337
<b>2</b>	<b><i>Single-Scattering Photon Correlation Spectroscopy</i></b> .....	<b>339</b>
2.1	Energy Transfer versus Momentum Transfer .....	339
2.2	Siegert Relation and Time Correlation Functions .....	340
2.3	Diffusions and Internal Motions .....	342
2.4	Practice of (Single-Scattering) Photon Correlation Experiments .....	344
<b>3</b>	<b><i>Photon Cross-Correlation Techniques</i></b> .....	<b>348</b>
3.1	Single Scattering versus Multiple Scattering .....	348
3.2	Photon Cross-Correlation Spectroscopy .....	350
<b>4</b>	<b><i>Practice of Photon Correlation and Cross-Correlation</i></b> .....	<b>355</b>
4.1	General Considerations [10] .....	355
4.2	Use of Optical Fibers .....	356
<b>5</b>	<b><i>Recent Developments</i></b> .....	<b>361</b>
5.1	Echo Dynamic Light Scattering .....	361
5.2	Phase Analysis Light Scattering (PALS) .....	364
<b>6</b>	<b><i>Final Remarks</i></b> .....	<b>369</b>
 <b>8</b>	 <b>Light Scattering from Multicomponent Polymer Systems in Shear Fields: Real-time, In Situ Studies of Dissipative Structures in Open Nonequilibrium Systems</b> .....	 <b>377</b>
	<i>T. Hashimoto</i>	
<b>1</b>	<b><i>Introduction</i></b> .....	<b>378</b>
1.1	General Background .....	378
1.2	Principles of Rheo-Optics .....	379
<b>2</b>	<b><i>Shear Rheo-Optics</i></b> .....	<b>380</b>
2.1	Background of Shear Rheo-Optics .....	380
2.2	Shear-Induced Phase Transition: Two Opposing Phenomena, Mixing and Demixing .....	383
<b>3</b>	<b><i>Dynamical Asymmetry and Stress–Diffusion Coupling in Multicomponent Systems</i></b> .....	<b>385</b>
3.1	Dynamical Asymmetry Versus Dynamical Symmetry .....	385
3.2	Some Anticipated Effects of Dynamical Asymmetry on Self-Assembly in the Quiescent State .....	387

3.3	Basic Time-Evolution Equation and a Theoretical Analysis of the Early Stage Self-Assembly in Dynamically Asymmetric Systems .....	393
3.4	General Background on the Effects of Shear Flow on Self-Assembly of Both Dynamically Symmetric and Asymmetric Systems .....	397
<b>4</b>	<b><i>Methodology</i> .....</b>	<b>399</b>
4.1	Simultaneous Measurements of Stress, Optical Microscopy, Light Scattering, Transmittance, Birefringence, etc .....	399
4.2	Examples: Simultaneous Measurements of Stress, Shear-SALS, and Shear-Microscopy .....	407
<b>5</b>	<b><i>Shear-Induced Mixing</i> .....</b>	<b>415</b>
5.1	Shear-Rate Dependence of Steady-State Structures .....	416
5.2	Uniformity of Droplet Size in Regime II .....	419
5.3	String Structure in Regime IV .....	421
5.4	Shear-Induced Phase Transition .....	424
5.5	Small Molecules Versus Polymers .....	429
5.6	Tracing Back the Growth History of Phase-Separated Structures .....	432
5.7	Further Remarks .....	434
<b>6</b>	<b><i>Shear-Induced Demixing (Phase Separation)</i> .....</b>	<b>434</b>
6.1	Observation of Shear-Induced Dissipative Structures .....	435
6.2	Origin of Shear-Induced Formation of Dissipative Structures .....	437
6.3	Shear-Rate Dependence .....	439
6.4	Time-Evolution of Transient Dissipative Structures .....	446
6.5	Further Remarks .....	450
6.6	Shear-Induced Dissipative Structures Formed for Semidilute Crystallizable Polymer Solutions .....	455
<b>9</b>	<b>Light Scattering from Polysaccharides as Soft Materials .....</b>	<b>463</b>
	<i>W. Burchard</i>	
<b>1</b>	<b><i>Introduction</i> .....</b>	<b>465</b>
1.1	Polysaccharides are Archetypes for Soft Materials .....	465

<b>2</b>	<b><i>Some General Considerations</i></b>	<b>468</b>
2.1	Can Static Light Scattering Shed some Light onto the Reasons for Softness?	469
2.2	New Insight by Dynamic Light Scattering in Combination with Static Light Scattering	472
<b>3</b>	<b><i>Flexibility and Rigidity</i></b>	<b>476</b>
3.1	Pullulan	476
3.2	Homoglucans of the $\alpha(1-4)$ and $\beta(1-4)$ Type	480
<b>4</b>	<b><i>Single- and Multiple Helices. Exocellular Polysaccharides</i></b>	<b>503</b>
4.1	Xanthan	504
4.2	Gellan and Polysaccharides from the <i>Rhizobia</i> Family	509
4.3	Schizopolytan	515
4.4	$\rho$ -Parameter and Second Virial Coefficient	517
4.5	Effects of Coulomb Charges and of Flexible Side Chains	518
<b>5</b>	<b><i>Gelation Versus Crystallization</i></b>	<b>520</b>
5.1	Alginates: Evidence for Bundle Formation	524
5.2	The Carrageenans: Evidence for Double Helix Formation	528
5.3	Summary of the Dispute on Double or Single Helices as Unimers	535
<b>6</b>	<b><i>Thickeners – What Inhibits Gel Formation?</i></b>	<b>536</b>
6.1	Galactomannans and Xyloglucans	537
6.2	Properties of Nonheated Tamarind Polysaccharides	541
6.3	Properties of Enzymatically Oxidized Tamarind Polysaccharides	543
<b>7</b>	<b><i>Branched Polysaccharides</i></b>	<b>546</b>
7.1	Random and Hyperbranched Types of Long Chain Branching	546
7.2	Experimental Verification	552
<b>8</b>	<b><i>Chain Dynamics</i></b>	<b>564</b>
8.1	Effects of Segmental Concentration in the Particle	565
8.2	Angular Dependence of the First Cumulant	568
8.3	Cluster Growth and Changes in Correlation Lengths in the Sol–Gel Transition	574
<b>9</b>	<b><i>Basic Relationships and Models</i></b>	<b>581</b>
9.1	Objectives of this Section	581

9.2	Static Light Scattering .....	582
9.3	Dynamic Light Scattering .....	589
<b>10</b>	<b>Fluorescence Photobleaching Recovery .....</b>	<b>605</b>
	<i>P. S. Russo, J. Qiu, N. Edwin, Y. W. Choi, G. J. Doucet, &amp; D. Sohn</i>	
1	<i>Introduction .....</i>	<i>607</i>
2	<i>When to Choose FPR .....</i>	<i>608</i>
3	<i>Labeling the Macromolecule .....</i>	<i>609</i>
3.1	General Considerations .....	609
3.2	How much Dye to Attach .....	611
3.3	Cleanup .....	611
3.4	Validating the Labeled Macromolecule .....	613
3.5	Recipes .....	614
4	<i>Different Types of FPR Instruments .....</i>	<i>615</i>
4.1	General Considerations .....	615
4.2	Single-Beam FPR Devices .....	618
4.3	Two-Beam Instruments .....	624
5	<i>Applications .....</i>	<i>627</i>
5.1	Dilute Macromolecular Solutions .....	627
5.2	Concentrated Solutions and Suspensions .....	627
5.3	Probe Diffusion .....	628
5.4	Liquid Crystals .....	628
5.5	Gels .....	629
5.6	Polyelectrolytes .....	630
5.7	Thin Films and Surfaces .....	630
5.8	Other Applications .....	631
6	<i>Expected Future Trends .....</i>	<i>632</i>
<b>11</b>	<b>Fluorescence Correlation Spectroscopy .....</b>	<b>637</b>
	<i>E. Haustein &amp; P. Schwille</i>	
1	<i>Introduction .....</i>	<i>638</i>
2	<i>Experimental Realization .....</i>	<i>640</i>
2.1	One-Photon Excitation .....	640

2.2	Two-Photon Excitation .....	642
2.3	Fluorescent Dyes .....	644
<b>3</b>	<b><i>Theoretical Concepts</i> .....</b>	<b>646</b>
3.1	Autocorrelation Analysis .....	646
3.2	Cross-Correlation Analysis .....	655
<b>4</b>	<b><i>FCS Applications</i> .....</b>	<b>657</b>
4.1	Concentration and Aggregation Measurements .....	657
4.2	Consideration of Residence Times: Determining Mobility and Molecular Interactions .....	658
4.3	Consideration of Cross-Correlation Amplitudes: A Direct Way to Monitor Association/Dissociation and Enzyme Kinetics .....	664
4.4	Consideration of Fast Flickering: Intramolecular Dynamics and Probing of the Microenvironment .....	671
<b>5</b>	<b><i>Conclusions and Outlook</i> .....</b>	<b>673</b>
 <b>12</b>	 <b>Forced Rayleigh Scattering – Principles and Application (Self Diffusion of Spherical Nanoparticles and Copolymer Micelles) .....</b>	 <b>677</b>
	<i>W. Schärtl</i>	
<b>1</b>	<b><i>Introduction</i> .....</b>	<b>678</b>
<b>2</b>	<b><i>Basics of Forced Rayleigh Scattering</i> .....</b>	<b>679</b>
2.1	Experimental Setup .....	679
2.2	Dynamical Processes Studied by FRS .....	682
<b>3</b>	<b><i>Applications</i> .....</b>	<b>689</b>
3.1	Self Diffusion of Colloidal Particles in Highly Concentrated Colloidal Dispersions .....	690
3.2	Self Diffusion of Copolymer Micelles in a Homopolymer Melt .....	693
<b>4</b>	<b><i>Concluding Remarks</i> .....</b>	<b>701</b>
	<i>Subject Index of Volume 1</i> .....	<b>705</b>
	<i>Author Index</i> .....	<b>721</b>

## VOLUME 2

<b>13</b>	<b>Small-Angle Neutron Scattering and Applications in Soft Condensed Matter .....</b>	<b>723</b>
	<i>I. Grillo</i>	
1	<i>Introduction .....</i>	<i>725</i>
2	<i>Description of SANS Instruments .....</i>	<i>725</i>
2.1	The Steady-State Instrument D22 .....	726
2.2	The Time-of-Flight Instrument LOQ .....	727
2.3	Detectors for SANS Instruments .....	729
2.4	Sample Environments .....	731
3	<i>Course of a SANS Experiment .....</i>	<i>731</i>
3.1	Definition of the q-Vector .....	731
3.2	Choice of Configurations and Systematic Required Measurements .....	732
3.3	Conclusion .....	735
4	<i>From Raw Data to Absolute Scaling .....</i>	<i>736</i>
4.1	Determination of the Incident Flux $\Phi_0$ .....	737
4.2	Normalization with a Standard Sample .....	737
4.3	Solid Angle $\Delta\Omega(Q)$ .....	739
4.4	Transmission .....	740
4.5	Multiple Scattering .....	743
4.6	Subtraction of Incoherent Background .....	745
4.7	Conclusion .....	746
5	<i>Modeling of the Scattered Intensity .....</i>	<i>746</i>
5.1	Rules of Thumb in Small-Angle Scattering .....	746
5.2	SLD, Contrast Variation, and Isotopic Labeling .....	749
5.3	Analytical Expressions of Particle Form Factors .....	753
5.4	Indirect Fourier Transform Method .....	759
5.5	Structure Factors of Colloids .....	761
6	<i>Instrument Resolution and Polydispersity .....</i>	<i>763</i>
6.1	Effect of the Beam Divergence and Size: $\theta$ Resolution .....	765
6.2	Effect of the $\lambda$ Distribution .....	765
6.3	Smearing Examples .....	767
6.4	Polydispersity .....	769
6.5	Instrumental Resolution and Polydispersity .....	770

6.6	Conclusion .....	771
6.7	Appendix: Definition of $\Delta\theta$ and $\Delta\lambda/\lambda$ ; Comparison between Triangle and Gaussian Functions .....	772
<b>7</b>	<b><i>Present Future and Perspective</i> .....</b>	<b>774</b>
7.1	Recent Developments .....	774
7.2	Future Developments .....	775
7.3	General Conclusion .....	777
<b>14</b>	<b>Small Angle Neutron Scattering on Gels .....</b>	<b>783</b>
	<i>M. Shibayama</i>	
<b>1</b>	<b><i>Introduction</i> .....</b>	<b>784</b>
<b>2</b>	<b><i>Theoretical Background</i> .....</b>	<b>787</b>
2.1	Scattering Functions for Polymer Solutions in Semi-Dilute Regime .....	787
2.2	Scattering Functions for Polymer Gels .....	789
2.3	Phenomenological Scattering Theories of Polymer Gels .....	790
2.4	Inhomogeneities in Gels .....	791
2.5	Statistical Theory of Polymer Gels .....	793
<b>3</b>	<b><i>Experimental Observation of Scattering Function for Various Conditions</i> .....</b>	<b>795</b>
3.1	Effects of Cross-Links .....	795
3.2	Swollen and Deswollen Gels .....	801
3.3	Scattering Function for Stretched Gels .....	804
3.4	Critical Phenomena and Volume Phase Transition .....	809
3.5	Charged Gels and Microphase Separation .....	815
3.6	Physical Gels .....	823
3.7	Oil Gelators .....	826
3.8	Other Gels and New Techniques .....	827
<b>4</b>	<b><i>Concluding Remarks</i> .....</b>	<b>827</b>
<b>15</b>	<b>Complex Melts under Extreme Conditions: From Liquid Crystal to Polymers .....</b>	<b>833</b>
	<i>L. Noirez</i>	
<b>1</b>	<b><i>Introduction</i> .....</b>	<b>834</b>

<b>2</b>	<b><i>Complex Melts under Flow</i></b>	<b>835</b>
2.1	The Mesomorphic State	837
2.2	First Rheo-SANS Experiments on SCLC-Polymer Melts: Non-Equilibrium Phase Diagram from Low to High Temperatures	839
2.3	Flow Effects in the Liquid State (Isotropic Phase) of SCLC-Polymers: A New Approach to the Molten State	851
<b>3</b>	<b><i>Pressure Effects on Liquid Crystal Melts</i></b>	<b>864</b>
3.1	The Importance of the Scattering Method for Structural Investigations	864
3.2	Definition of the Relevant Parameters	865
3.3	Influence of the Pressure on the Layer Distance	867
3.4	Influence of the Pressure on the Smectic Order Parameter	867
3.5	Influence of the Pressure on the Smectic Phase Correlation Lengths	868
3.6	Conclusions and Perspectives on Pressure Effects	870
<b>16</b>	<b>In Situ Investigation of Adsorbed Amphiphilic Block Copolymers by Ellipsometry and Neutron Reflectometry</b>	<b>873</b>
	<i>R. Toomey &amp; M. Tirrell</i>	
<b>1</b>	<b><i>Introduction</i></b>	<b>874</b>
<b>2</b>	<b><i>Ellipsometry</i></b>	<b>875</b>
2.1	Analysis of Thin, Adsorbed films at the Brewster Angle	876
2.2	Data Collection and Interpretation	878
2.3	Limits of Model Applicability	879
<b>3</b>	<b><i>Adsorption Results</i></b>	<b>880</b>
3.1	Materials and Experimental	880
3.2	Adsorption of PS-b-PVP Copolymers	881
3.3	Adsorption of NaPSS-b-PtBS Copolymers	885
3.4	Summary	890
<b>4</b>	<b><i>Neutron Reflection</i></b>	<b>890</b>
4.1	Experimental	892
4.2	Results	892
<b>5</b>	<b><i>Conclusions</i></b>	<b>896</b>

<b>17</b>	<b>Synchrotron Small-Angle X-Ray Scattering .....</b>	<b>899</b>
	<i>T. Narayanan</i>	
1	<i>Introduction .....</i>	<i>900</i>
2	<i>General Principle .....</i>	<i>901</i>
2.1	Momentum Transfer and Differential Scattering	
	Cross Section .....	901
2.2	Form Factor and Polydispersity .....	904
2.3	Limiting Form of $I(q)$ .....	906
2.4	Structure Factor .....	909
3	<i>Experimental Setup .....</i>	<i>914</i>
3.1	Source .....	916
3.2	Impacts of Third Generation Sources .....	917
3.3	Optics .....	919
3.4	Detectors .....	921
3.5	Sample Environments .....	924
4	<i>Data Reduction .....</i>	<i>928</i>
4.1	Intensity Normalization .....	929
4.2	Angular and Intensity Calibrations .....	930
4.3	Instrumental Smearing Effects .....	931
4.4	Influence of Radiation Damage .....	932
5	<i>Complimentary SAXS Methods .....</i>	<i>933</i>
5.1	Combined Small-Angle and Wide-Angle X-ray Scattering ....	933
5.2	Ultra Small-Angle X-ray Scattering .....	937
5.3	Anomalous Small-Angle X-ray Scattering .....	942
5.4	Time-Resolved Experiments .....	946
6	<i>Summary and Outlook .....</i>	<i>948</i>
<b>18</b>	<b>X-Ray Photon Correlation Spectroscopy (XPCS) .....</b>	<b>953</b>
	<i>G. Grübel, A. Madsen &amp; A. Robert</i>	
1	<i>Introduction .....</i>	<i>954</i>
2	<i>Coherent X-Rays from a Synchrotron Source .....</i>	<i>956</i>
3	<i>Disorder under Coherent Illumination .....</i>	<i>958</i>
3.1	Statistical Properties of Speckle Patterns .....	961
3.2	Reconstruction of Static Speckle Patterns .....	963
4	<i>X-Ray Photon Correlation Spectroscopy (XPCS) .....</i>	<i>965</i>

<b>5</b>	<b><i>Experimental Set-Up</i></b>	<b>967</b>
<b>6</b>	<b><i>XPCS in Soft Condensed Matter Systems</i></b>	<b>969</b>
6.1	Static and Dynamic Properties of Colloidal Suspensions	970
6.2	XPCS and SAXS Measurements in Colloidal Suspensions	971
6.3	Slow Dynamics in Polymer Systems	976
<b>7</b>	<b><i>Liquid Surface Dynamics Studied by XPCS</i></b>	<b>978</b>
7.1	Homodyne versus Heterodyne Detection	979
7.2	Dynamics of Thin Polymer Films	980
7.3	Dynamic Cross-Over Behavior of Liquid Mixtures	982
7.4	Critical Dynamic Behavior of a Liquid Crystal Surface	984
<b>8</b>	<b><i>Slow Dynamics in Hard Condensed Matter Systems</i></b>	<b>985</b>
<b>9</b>	<b><i>Conclusions and Outlook</i></b>	<b>990</b>

<b>27 Highly-Branched Polymers: From Comb to Dendritic Architectures</b>	<b>1339</b>
<i>P. Viville, M. Schappacher, R. Lazzaroni &amp; A. Deffieux</i>	
1 Introduction	1341
2 Linear Combs	1342
2.1 Combs with Homopolymer Branches	1342
2.2 Combs with Randomly Distributed A and B Branches	1347
2.3 Combs with A-B Diblock Branches	1348
2.4 Stars with Comb Branches	1349
3 Homopolymers and Block-Like Copolymers with Hyperbranched Architectures	1354
3.1 Controlled Branching	1354
3.2 Combs-on-Combs	1356
4 Towards Water-Soluble Dendrigrfts	1361
5 Applications	1369
5.1 Encapsulation of Molecules into Water-Soluble Dendrigrfts	1369
6 Viral Diagnostic using Dendrigrft-Oligonucleotides	1371
7 Synopsis	1375
<b>28 AFM Imaging in Physiological Environment: From Biomolecules to Living Cells</b>	<b>1379</b>
<i>T. Cohen-Bouhacina &amp; A. Maali</i>	
1 General Introduction	1381
2 Principle and Operating of AFM	1383
2.1 Principal Components of the Microscope	1383
2.2 Imaging Modes	1385
2.3 Biological Sample Preparation	1389
2.4 AFM Tip Modifications	1390
3 Imaging of Biological Systems	1391
3.1 Biomolécules	1392
3.2 Membranes	1395

<b>4</b>	<b><i>Imaging of Cells</i></b>	<b>1401</b>
4.1	Topography of Intact Cells	1401
4.2	Cell Mechanical Properties	1403
4.3	Example 1 : Local Nanomechanical Motion of the Cell Wall of <i>Saccharomyces cerevisiae</i>	1405
4.4	Example 2: Cell Adhesion	1408
<b>5</b>	<b><i>Developments and Perspectives of the Dynamic Mode in Liquid Medium for Imaging Biological Systems</i></b>	<b>1418</b>
5.1	Examples of Dynamic Mode Imaging in Liquid	1419
5.2	Example of Improvement of Dynamic AFM in Liquid Small Amplitudes	1423
<b>6</b>	<b><i>Conclusion</i></b>	<b>1432</b>
