

Contents

1. General Introduction	1
<i>A. Ahnell and H. O'Leary</i>	
1. Environmental technology	1
2. The beginning	1
3. The environmental effects of the oil industry	2
3.1. Air emissions	2
3.2. Water management	5
3.3. Waste management	7
4. Technology used in the oil industry	10
4.1. Pollution control	10
4.2. Pollution prevention	12
5. Oil Industry future: design for the environment	13
5.1. Design out the production problems	13
6. Summary	15
References	15
2. Environmental Control Technology for Oilfield Processes	17
<i>A.K. Wojtanowicz</i>	
1. Introduction	17
2. Environmental control technology	20
3. Evolution of environmentally controlled oilfield processes	21
3.1. Scope and characteristics of oilfield ECT	23
3.2. Methodology of ECT design	25
4. ECT analysis of drilling process	28
4.1. Mechanisms of drilling waste discharge	28
4.2. Sources of drilling waste toxicity	36
4.3. Waste generation mechanisms in petroleum production	38
4.4. Sources of toxicity in produced water	42
References	48

3. Environmental Control of Well Integrity	53
<i>A.K. Wojtanowicz</i>	
1. Introduction	53
2. Mechanism of cement seal failures	53
3. Improved cementing for annular integrity	56
4. Cement pulsation after placement	57
5. Integrity of injection wells	60
6. Measurements of well integrity	63
7. Sustained casinghead pressure	65
7.1. Rig methods for SCP isolation	66
7.2. Rig-less technology for SCP isolation	68
References	71
4. Environmental Control of Drilling Fluids and Produced Water	77
<i>A.K. Wojtanowicz</i>	
1. Control of drilling fluid volume	77
1.1. Control of mud dispersibility	77
1.2. Improved solids-control–closed-loop systems	79
1.3. Dewatering of drilling fluids: ‘dry’ drilling location	82
2. Control of drilling fluid toxicity	85
2.1. Drilling fluid toxicity testing	85
2.2. Low-toxicity substitutes	87
2.3. Synthetic base drilling fluids	88
2.4. Source separation – drill cuttings de-oiling	90
3. Control of produced water volume	93
3.1. Source reduction – water shut-off technology	94
3.2. Source separation–downhole oil/gas/water separation	96
3.3. Source reduction with downhole water sink	99
4. Control of produced water pollutants	103
4.1. Oil-free water from DWS drainage-production systems	104
4.2. Deoiling of produced water	107
4.3. Removal of dissolved organics from produced water	111
4.4. Produced water salinity reduction	112
References	113
5. Oilfield Waste Disposal Control	123
<i>A.K. Wojtanowicz</i>	
1. Introduction	123
2. Oilfield waste disposal to land	124
2.1. Impact of oilfield pit contaminants	124
2.2. Oilfield pit sampling and evaluation	126
2.3. Oilfield pit closure: liquid phase	127
2.4. Oilfield pit closure: solid phase	127

3. Subsurface waste disposal to wells	129
3.1. Description of slurry injection process of muds and cuttings	133
3.2. Slurry fracture injection of muds and cuttings	139
3.3. Properties of injected slurries	144
3.4. Environmental implications of subsurface slurry injection	145
3.5. Periodic injection to multiple fractures	147
References	151
 6. Drilling and Production Discharges in the Marine Environment	 155
<i>A.B. Doyle, S.S.R. Pappworth, and D.D. Caudle</i>	
1. Introduction	155
2. Nature of offshore discharges	157
2.1. Produced water	157
2.2. Drilling waste	158
2.3. Magnitude of waste discharges	160
2.4. Accidental discharges	161
2.5. Wastes that require handling during site abandonment	164
3. Potential impacts on the environment	165
3.1. Introduction	165
3.2. Potential impacts from produced water	166
3.3. Potential impacts from drilling waste	167
3.4. Potential impacts from treating chemicals	168
3.5. Potential impacts from accidental discharges	168
4. Regulatory approaches	170
4.1. Regulations for waste discharges	170
4.2. OSPAR agreements and national regulations for the OSPAR area	171
4.3. United states regulations	172
4.4. Comparing and contrasting OSPAR and United States EPA regulations	174
4.5. Russian and former Soviet Republics regulations	175
4.6. Other regulatory systems	175
4.7. Accidental discharges	175
5. Should the release be re-mediated?	184
6. Sources of data on discharges to the marine environment	185
References	186
 7. Decommissioning of Offshore Oil and Gas Installations	 189
<i>M.D. Day</i>	
1. Introduction	189
2. Legal framework of platform decommissioning	190
3. Planning	195
4. Abandonment phases	195

4.1. Well abandonment	196
4.2. Preabandonment surveys/data gathering	196
4.3. Engineering	197
4.4. Decommissioning	199
4.5. Structure removal	201
4.6. Disposal	209
4.7. Site clearance	211
5. Conclusion	212
References	212
 8. Tanker Design: Recent Developments from an Environmental Perspective	 215
<i>G. Peet</i>	
1. Introduction	215
2. Tanker accidents	216
3. Tanker design	219
4. New tanker design standards: the USA takes the lead	220
5. New tanker designs: the international debate in the early 1990s	221
6. Some developments since the adoption of the new MARPOL regulations in 1992	225
7. Some observations regarding the effectiveness of MARPOL's double hull requirements	226
8. Epilogue	227
References	228
 9. Pipeline Technology	 229
<i>A.A. Ryder and S.C. Rapson</i>	
1. Introduction	229
2. Environmental pressures	231
3. Onshore pipelines	232
3.1. Design	233
3.2. Construction	237
3.3. Operation	250
3.4. Decommissioning	256
4. Offshore pipelines	256
4.1. Design	256
4.2. Construction	258
4.3. Operation	265
4.4. Decommissioning	267
5. Pipeline landfalls	267
5.1. Design	268
5.2. Construction	270
References	279

10. Environmental Management and Technology in Oil Refineries	281
<i>H. Amiry, H. Sutherland, E. Martin, and P. Goodsell</i>	
1. Function of an oil refinery	281
2. Overview	282
3. Control of atmospheric emissions	283
3.1. Minimizing combustion-related emissions	284
3.2. Minimizing flare-related emissions	289
3.3. Minimizing fugitive emissions	289
3.4. Odour control	292
3.5. Sulphur removal and recovery	293
4. Control of aqueous emissions	295
4.1. Source control	296
4.2. Effluent treatment	298
5. Soil and groundwater protection	301
5.1. Source control	301
5.2. Monitoring	302
5.3. Remediation	303
5.4. Preventive techniques	303
6. Control of solid wastes	304
6.1. Source control	304
6.2. Waste treatment	306
6.3. Waste disposal	308
7. Recycling to minimize waste	311
7.1. Reuse on-site	311
7.2. Off-site recycling	311
8. Environmental management	312
8.1. Environmental control	312
8.2. Environmental training	313
8.3. Environmental auditing	314
References	314
11. Distribution, Marketing and Use of Petroleum Fuels	315
<i>T. Coley and J. Price</i>	
1. Introduction	315
2. Main refinery product types	315
3. Protection of the environment	317
3.1. The atmosphere	317
3.2. Sea waters: compliance with maritime regulations	319
3.3. Soil and groundwater	319
4. Distributing the products	320
4.1. Distribution systems	320
5. Anti-pollution controls	322
5.1. The atmosphere	322

5.2. The high seas	322
5.3. Coastal and inland waterways	324
5.4. Soil and groundwater	325
6. Marketing the products	327
6.1. Large industrial customer installations	327
6.2. Small industrial and domestic customers	328
6.3. Service stations	328
7. Environmental technologies related to product use	329
7.1. Fuels	329
7.2. Marine diesel engines and fuels	329
7.3. Fuels for large industrial power plants	332
7.4. Fuels for small industrial and domestic installations	332
7.5. Aircraft engines and fuels	334
7.6. Engines for rail transport	335
7.7. Automotive engines	335
7.8. Into the next millenium	347
Further reading	347
12. Lubricants	351
<i>C.I. Betton</i>	
1. Introduction	351
2. Performance	353
3. Components	353
4. Base fluids	354
5. Mineral oils	354
6. Synthetic base oils	356
6.1. Polyol esters	356
6.2. Poly- α -olefins	356
7. Hydrocracked mineral oils	357
8. Additives	357
9. Actual environmental effects	358
10. Biodegradability	359
10.1. Biodegradation is not necessary in a lubricant	360
10.2. A biodegradable lubricant will encourage dumping at the expense of collection and disposal	360
10.3. A biodegradable lubricant will degrade in the engine	360
10.4. A biodegradable lubricant will result in high concentrations of toxic residues that are detrimental to the environment	361
10.5. Biodegradation is not necessary, as motor manufacturers are now producing sealed lubricant systems	361
11. Collection and recycling of used oils	361
12. Conclusion	363
References	364

13. Climate Change Scenarios and Their Potential Impact on World Agriculture	367
<i>C. Wallace and D. Viner</i>	
1. What causes the climate system to change?	367
2. Past climatic changes	369
3. Anthropogenic forcing of the climate system	372
4. Future changes in anthropogenic forcing	374
5. Implications of SRES scenarios on global climate	375
5.1. Temperature	376
5.2. Precipitation	377
5.3. Sea level rise	378
5.4. Mitigation possibilities within the agricultural sector	379
6. Implications of SRES scenarios on regional climate	379
6.1. Europe	379
6.2. North America	385
7. Impacts of future climate change on agriculture	385
7.1. Europe	386
7.2. North America	387
