
Contents

Notation	ix
1 Experimental Study of Erosion Characteristics	1
1.1 Laboratory Equipment Used in Erosion Research.....	1
1.2 Dependence of Erosion on Particle Velocity.....	14
1.3 Dependence of Erosion on Impact Angle.....	19
1.4 Dependence of Erosion on Particle Size.....	22
1.5 Influence of Particle Concentration.....	24
1.6 Effect of Abrasive Mixtures and Liquid Additives on Erosion.....	27
1.6.1 Effect of Mixtures of Uniform Granularity.....	27
1.6.2 Effect of Fine-grained Solid Additives on Abrasion.....	27
1.6.3 Abrasion by Industrial Dusts.....	30
1.6.4 Effect of Liquid Additives.....	33
1.7 Influence of Temperature on Erosion.....	36
1.8 Erosion of Surface by Grazing Particles.....	44
1.9 References.....	47
2 Research into the Physical Mechanism of Erosion	51
2.1 Changes in the Macro- and Microgeometry of a Wearing Surface.....	51
2.2 Stress Distribution and Structural Changes in Target Material Surface Layer.....	57
2.3 Fragmentation of Abrasive Particles and Adhesion of the Latter to the Surface.....	61
2.4 References.....	65
3 Development of Theories of Collision and Erosion	67
3.1 Hypothesis of a Constant Specific Energy; Dynamic Hardness.....	67
3.2 Experimental and Theoretical Determination of the Coefficient of Restitution.....	76
3.3 Analytical Determination of Indentation Load in Terms of Impact Energy.....	82
3.3.1 Mathematical Models for Force Calculation.....	82
3.3.2 Comparison of Calculated and Experimental Results.....	86
3.3.3 Conclusions.....	88

3.4 Theoretical Treatment of Erosion	89
3.4.1 A Short Survey of Erosion Theory	89
3.4.2 Erosion by Plastic Contact	90
3.4.2.1 Energetic Erosion Theory	90
3.4.2.2 Verification and Modification of Energetic Erosion Theory	93
3.4.3 Erosion by Brittle Behaviour	99
3.4.3.1 Modelling of Wear	99
3.4.3.2 Verification of the Model	104
3.4.4 Calculation of Erosive Wear of Composite Materials	107
3.5 Prediction of Relative Erosion Resistance	117
3.6 References	125
4 Erosion Resistance of Powder Materials and Coatings	129
4.1 Groups and Properties of Wear Resistant Materials and Coatings	129
4.2 Erosion Resistance of Advanced Ceramic Materials and Coatings	131
4.3 Erosion Resistance of Ceramic-Metal Composites and Coatings at Room Temperature	134
4.3.1 Erosion of Ceramic-Metal Composites	134
4.3.2 Erosion of Coatings	145
4.4 Erosion Resistance of Ceramic-Metal Materials and Coatings at Elevated Temperatures	150
4.4.1 Erosion of Ceramic-Metal Composites	150
4.4.2 Erosion of Coatings	153
4.5 Criteria for Erosive Wear Resistant Material and Coating Selection	156
4.5.1 Tribological Criteria	156
4.5.2 Structural Criteria	159
4.5.3 Qualitative Criteria	163
4.6 References	166
5 Improvement of Erosion Resistance of Industrial Equipment	169
5.1 Fans and Exhausters	169
5.1.1 Influence of Geometrical Parameters of the Rotor on the Erosion Rate	170
5.1.2 Design Methods for Reducing Erosion of Rotors	174
5.2 Disintegrators	176
5.2.1 Use of Disintegrators in the Building Industry	176
5.2.2 Disintegrator as a Machine for Treatment of Different Materials by Collision	177
5.2.3 Application of Wear Resistant Materials and Coatings in Disintegrators	179
5.2.4 Improvement of Disintegrator Design	183
5.3 Cyclones for Ash Separation	187
5.3.1 Cyclone Working Conditions	187
5.3.2 Determination of the Impact Parameters of Erosive Particles	188
5.4 Drying Line Equipment at Peat-Briquette Works	190
5.5 Disintegrator as a Device for Milling of Mineral Ores	192
5.5.1 Materials to be Studied	193
5.5.2 Grindability and Abrasivity of Mineral Materials and Ores	194
5.5.3 Prediction of Relative Erosion Resistance of the Grinding Media	197
5.6 References	199
Index	203

Solid Particle Erosion

Occurrence, Prediction and Control

Kleis, I.; Kulu, P.

2008, XII, 206 p., Hardcover

ISBN: 978-1-84800-028-5
