# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Constraints Satisfaction Problems - CSPs</b>	<b>7</b>
2.1	Defining CSPs	8
2.2	CSP Algorithms and Techniques	10
2.3	Behavior of CSP solving algorithms	13
<b>3</b>	<b>Constraints Optimization Problems - COPs</b>	<b>19</b>
3.1	Branch and Bound (BnB)	20
3.2	Branch and Bound + Arc-Consistency (BnB-AC)	23
3.3	Branch and Bound + AC* (BnB-AC*)	24
3.4	Phase Transition in MaxCSPs	25
<b>4</b>	<b>Distributed Search</b>	<b>27</b>
4.1	Distributed search algorithms on DisCSPs	30
4.2	Introducing Asynchronous Backtracking	33
<b>5</b>	<b>Asynchronous Backtracking (ABT)</b>	<b>37</b>
5.1	A Complete 4-Queens Example	40
5.2	The ABT Algorithm - Polynomial Storage	43
5.3	Correctness of ABT	47
5.4	Improving Performance of ABT	49
<b>6</b>	<b>Asynchronous Forward-Checking</b>	<b>53</b>
6.1	<i>AFC</i> - Algorithm Description	55
6.2	Correctness of <i>AFC</i>	59
6.3	Improved Backtrack Method for <i>AFC</i>	61
<b>7</b>	<b>Concurrent Dynamic Backtracking</b>	<b>63</b>
7.1	4-Queens with Concurrent Search	65
7.2	The <i>ConcBT</i> Algorithm	67
7.2.1	A splitting of search space example	72

7.3	Concurrent Dynamic Backtracking .....	75
7.4	Correctness of Concurrent Search .....	79
<b>8</b>	<b>Distributed Ordering Heuristics</b> .....	<b>83</b>
8.1	Ordering heuristics for Synchronous Backjumping .....	85
8.1.1	Heuristics with no additional messages .....	85
8.1.2	Heuristics with additional network overhead .....	86
8.2	Ordering heuristics for <i>AFC</i> .....	86
<b>9</b>	<b>Asynchronous Ordering Heuristics</b> .....	<b>89</b>
9.1	Specific Asynchronous Heuristics .....	89
9.2	Dynamically ordered ABT .....	91
9.3	Correctness of <i>ABT_DO</i> .....	94
9.4	A new class of asynchronous heuristics .....	97
9.5	Correctness of Retroactive <i>ABT_DO</i> .....	102
<b>10</b>	<b>Performance measures for distributed search</b> .....	<b>105</b>
10.1	A Simple Example with Naive Methods .....	107
10.2	Dividing concurrent search into rounds .....	108
10.3	A More Complex Example for Computing NCCCs .....	110
10.4	A Model for Nonconcurrent Constraints Checks .....	111
10.5	The Cumulative Cost Algorithm (CCA) .....	113
10.6	Realization of the Model by the CCA Algorithm .....	115
<b>11</b>	<b>Experimental Evaluation of DisCSP Algorithms</b> .....	<b>121</b>
11.1	Comparing Different Algorithms .....	122
11.1.1	Asynchronous forward-checking vs. ABT .....	122
11.1.2	Experimental evaluation of <i>ConcDB</i> .....	123
11.2	Empirical Evaluation of Heuristic Ordering .....	125
11.2.1	Evaluation of synchronous ordering heuristics .....	126
11.2.2	Evaluation of dynamically ordered ABT .....	128
11.2.3	Retroactive ordering for ABT .....	133
<b>12</b>	<b>The Impact of Communication - Message Delays</b> .....	<b>137</b>
12.1	Simulating Delayed Messages on DisCSPs .....	139
12.1.1	Adjusting the measuring method for dynamic ordering .....	140
12.2	Validity of <i>AMDS</i> .....	141
<b>13</b>	<b>Message Delays and DisCSP Search Algorithms</b> .....	<b>143</b>
13.1	The Impact of Message Delays .....	145
13.2	A summary of the Impact of Message Delays .....	154
13.3	Message Delays and Dynamic Ordering .....	156

<b>14</b>	<b>Distributed Constraint Optimization Problems (DisCOPs)</b>	159
14.1	Pseudo-trees	160
14.2	Synchronous Branch and Bound (SBB)	161
14.3	Distributed Pseudo-tree Optimization (DPOP)	162
14.4	Optimal Asynchronous Partial Overlay (OptAPO)	164
<b>15</b>	<b>Asynchronous Optimization for DisCOPs</b>	169
15.1	Lower and Upper Bounds in <i>ADOPT</i>	170
15.1.1	Computing lower and upper bounds	171
15.2	Assigning Values	172
15.3	The Threshold Mechanism	175
15.4	<i>ADOPT</i> - Summary and Termination	176
15.5	Special (and Surprising) Features of <i>ADOPT</i>	178
15.5.1	Updating context from lower priority agents	179
15.5.2	Pseudo-trees and concurrency of computation	180
15.5.3	Network load of <i>ADOPT</i>	182
<b>16</b>	<b>Asynchronous Forward-Bounding</b>	183
16.1	AFB - Overview	183
16.2	Lower Bound Estimation for the Cost Increment	184
16.3	AFB - Algorithm Description	186
16.4	The Time-Stamp Mechanism	188
16.5	AFB - Proof of Correctness	189
16.6	Concurrency in AFB	190
<b>17</b>	<b>Extending AFB - BackJumping</b>	193
17.1	Adding Value Ordering Heuristics	194
17.2	Backjumping - Key Concepts	194
17.3	A Backjumping Example	196
17.4	The AFB-BJ Algorithm	198
17.5	AFB-BJ - Proof of Correctness	201
<b>18</b>	<b>Empirical Evaluation of DisCOP algorithms</b>	203
18.1	Empirical Evaluation of AFB and AFB-BJ	204
	<b>References</b>	209
	<b>Index</b>	215
