Part I The Analysis of Discrete-time Signals

1	Understanding Sampling	3
1.1	The Sample-and-hold Operation	3
1.2	The Ideal Sampler in the Frequency Domain	4
1.2.1	Representing the Ideal Sampler Using Complex Exponentials: A Simple Approach	4
1.2.2	Representing the Ideal Sampler Using Complex Exponentials: A More Careful Approach	5
1.2.3	The Action of the Ideal Sampler in the Frequency Domain	9
1.3	Necessity of the Condition	10
1.4	An Interesting Example	11
1.5	Aliasing	11
1.6	The Net Effect	11
1.7	Undersampling	14
1.8	The Experiment	14
1.9	The Report	15
1.10	Exercises	15
2	Signal Reconstruction	17
2.1	Reconstruction	17
2.2	The Experiment	18
2.3	The Report	18
2.4	Exercises	19
3	Time-limited Functions Are Not Band-limited	21
3.1	A Condition for Analyticity	21
3.2	Analyticity Implies Lack of Compact Support	23
3.3	The Uncertainty Principle	23
3.4	An Example	24

3.5	The Best Function	25
3.6	Exercises	26
4	Fourier Analysis and the Discrete Fourier Transform	29
4.1	An Introduction to the Discrete Fourier Transform	29
4.2	Two Sample Calculations	30
4.3	Some Properties of the DFT	31
4.4	The Fast Fourier Transform	35
4.5	A Hand Calculation	36
4.6	Fast Convolution	37
4.7	MATLAB, the DFT, and You	37
4.8	Zero-padding and Calculating the Convolution	39
4.9	Other Perspectives on Zero-padding	41
4.10	MATLAB and the Serial Port	42
4.11	The Experiment	42
4.12	Exercises	42
5	Windowing	45
5.1	The Problems	45
5.2	The Solutions	47
5.3	Some Standard Window Functions	47
5.3.1	The Rectangular Window	48
5.3.2	The Triangular Window	48
5.4	The Raised Cosine Window	48
5.5	A Remark on Widths	49
5.6	Applying a Window Function	49
5.7	A Simple Comparison	50
5.8	MATLAB's Window Visualization Tool	51
5.9	The Experiment	51
5.10	Exercises	51
6	Signal Generation with the Help of MATLAB	53
6.1	Introduction	53
6.2	A Simple Sinewave Generator	53
6.3	A Simple White Noise Generator	54
6.4	The Experiment	54
6.5	Exercises	55
7	The Spectral Analysis of Random Signals	57
7.1	The Problem	57
7.2	The Solution	58
7.3	Warm-up Experiment	59
7.4	The Experiment	61
7.5	Exercises	63

Part II Analog to Digital and Digital to Analog Converters

8	The General Structure of Sampled-data Systems	67
8.1	Systems for Spectral Analysis	67
8.2	Systems for Implementing Digital Filters	68
9	The Operational Amplifier: An Overview	69
9.1	Introduction	69
9.2	The Unity-gain Buffer	69
9.3	Why the Signal is Fed Back to V_-	71
9.4	The “Golden Rules”	71
9.5	The Inverting Amplifier	72
9.6	Exercises	72
10	A Simple Digital to Analog Converter	75
10.1	The Digital to Analog Converter	75
10.2	Practical Difficulties	77
10.3	The Experiment	78
10.4	Exercises	79
11	The Binary Weighted DAC	81
11.1	The General Theory	81
11.2	Exercises	83
12	The R-2R Ladder DAC	85
12.1	Introduction	85
12.2	The Derivation	85
12.3	Exercises	87
13	The Successive Approximation Analog to Digital Converter	89
13.1	General Theory	89
13.2	An Example	90
13.3	The Sample-and-hold Subsystem	91
14	The Single- and Dual-slope Analog to Digital Converters	93
14.1	The Single-slope Converter	93
14.2	Problems with the Single-slope A/D	94
14.3	The Dual-slope A/D	95
14.4	A Simple Example	95
14.5	Exercises	96

15	The Pipelined A/D	99
15.1	Introduction	99
15.2	The Fully Pipelined A/D	100
15.3	The Experiment	102
15.4	Exercises	102
16	Resistor-chain Converters	103
16.1	Properties of the Resistor Chain	103
16.2	The Resistor-chain DAC	103
16.3	The Flash A/D	104
16.4	Exercises	105
17	Sigma-Delta Converters	109
17.1	Introduction	109
17.2	The Sigma-Delta A/D	110
17.3	Sigma-Delta A/Ds, Oversampling, and the Nyquist Criterion	112
17.4	Sigma-Delta DACs	113
17.5	The Experiment	113

Part III Digital Filters

18	Discrete-time Systems and the Z-transform	117
18.1	The Definition of the Z-transform	117
18.2	Properties of the Z-transform	117
18.2.1	The Region of Convergence (ROC)	117
18.2.2	Linearity	119
18.2.3	Shifts	119
18.2.4	Multiplication by k	119
18.3	Sample Transforms	120
18.3.1	The Transform of the Discrete-time Unit Step Function	120
18.3.2	A Very Similar Transform	120
18.3.3	The Z-transforms of Two Important Sequences	121
18.3.4	A Two-sided Sequence	122
18.4	Linear Time-invariant Systems	122
18.5	The Impulse Response and the Transfer Function	123
18.6	A Simple Example	124
18.7	The Inverse Z-transform	124
18.7.1	Inversion by Contour Integration	124
18.7.2	Inversion by Partial Fractions Expansion	125
18.7.3	Using MATLAB to Help	126
18.8	Stability of Discrete-time Systems	127
18.9	From Transfer Function to Recurrence Relation	128
18.10	The Sinusoidal Steady-state Response of Discrete-time Systems	130

18.11	MATLAB and Linear Time-invariant Systems	132
18.11.1	Individual Commands	132
18.11.2	The <code>ltiview</code> Command	134
18.12	Exercises	134
19	Filter Types	139
19.1	Finite Impulse Response Filters	139
19.2	Infinite Impulse Response Filters	140
19.3	Exercises	140
20	When to Use C (Rather than Assembly Language)	143
20.1	Introduction	143
20.2	A Simple Low-pass Filter	143
20.3	A Comparison with an RC Filter	144
20.4	The Experiment	145
20.5	Exercises	145
21	Two Simple FIR Filters	147
21.1	Introduction	147
21.2	The Experiment	149
21.3	Exercises	149
22	Very-narrow-band Filters	151
22.1	A Very Simple Notch Filter	151
22.2	From Simple Notch to Effective Bandpass	151
22.3	The Transfer Function	152
22.4	The Experiment	152
22.5	Exercises	153
23	Design of IIR Digital Filters: The Old-fashioned Way	155
23.1	Analog Filter Design	155
23.2	Two Simple Design Examples	157
23.3	Why We Always Succeed in Our Attempts at Factoring	159
23.4	The Bilinear Transform	160
23.5	The Passage from Analog Filter to Digital Filter	161
23.6	MATLAB and the Bilinear Transform	162
23.7	The Experiment	164
23.8	Exercises	164
24	New Filters from Old	165
24.1	Transforming Filters	165
24.2	Functions that Take the Unit Circle into Itself	165
24.3	Converting a Low-pass Filter into a High-pass Filter	167
24.4	Changing the Cut-off Frequency of an Existing Low-pass Filter	168
24.5	Going from a Low-pass Filter to a Bandpass Filter	170
24.6	The Experiment	171

24.7	The Report	171
24.8	Exercises	172
25	Implementing an IIR Digital Filter	173
25.1	Introduction	173
25.2	The Direct Form I Realization	174
25.3	The Direct Form II Realization	175
25.4	Trouble in Paradise	175
25.5	The Solution: Biquads	177
25.6	Exercises	178
26	IIR Filter Design Using MATLAB	181
26.1	Individual Commands	181
26.2	The Experiment: Part I	183
26.3	Fully Automatic Filter Design	183
26.4	The Experiment: Part II	183
26.5	Exercises	184
27	Group Delay and Phase Delay in Filters	185
27.1	Group and Phase Delay in Continuous-time Filters	185
27.2	A Simple Example	187
27.3	A MATLAB Experiment	187
27.4	Group Delay in Discrete-time Systems	188
27.5	Exercises	189
28	Design of FIR Filters	191
28.1	FIR Filter Design	191
28.2	Symmetric FIR Filters	194
28.3	A Comparison of FIR and IIR Filters	197
28.4	The Experiment	197
28.5	Exercises	198
29	Implementing a Hilbert Filter	199
29.1	An Introduction to the Hilbert Filter	199
29.2	Problems and Solutions	200
29.3	The Experiment	200
29.4	Exercises	201
30	The Goertzel Algorithm	203
30.1	Introduction	203
30.2	First-order Filters	203
30.3	The DFT as the Output of a Filter	204
30.4	Comparing the Two Methods	205
30.5	The Experiment	206
30.6	Exercises	206
