
Contents

List of Contributors..... xvii

1 Introduction..... 1

1.1 Structure and Fundamental Problems of Electrical Power Systems 1

1.2 Power Flow Control, Distributed Generation and Energy Storage Benefits to Grids 4

1.3 Smart Electrical Energy Networks Concept 8

References..... 9

2 Principles of Electrical Power Control..... 13

2.1 Power Theory..... 13

2.1.1 Critical Review of Classical Power Theory 13

2.1.2 Instantaneous Power Theory 27

2.2 General Problems and Solutions of Control in Smart Power Systems 31

2.2.1 Control in Smart Power Systems 31

2.2.2 Damping of the System Oscillations 33

2.2.3 Power Quality Control..... 37

References..... 46

3 Overview of Power Electronics Converters and Controls..... 55

3.1 Power Electronics Background..... 55

3.1.1 Historical Perspective 57

3.1.2 Generic Power Electronics Arrangements 59

3.1.3 Switching and Continuous Models of Converters 62

3.2 High Technology of Converters..... 66

3.2.1 State-of-the-Art of Power Semiconductors Switches 67

3.2.2 Soft-switching vs Hard-switching Techniques 69

3.2.3 Construction Arrangement and Cooling Systems..... 73

3.3 Multi-level Converters..... 77

3.3.1 Multi-level Converter Concepts 77

3.3.2	Basic Comparison of Multi-level Inverter Topology.....	81
3.3.3	Space Vector PWM Algorithm of a Multi-level VSI	82
3.4	Z-source Converters.....	88
3.4.1	Operation Principle of the Voltage Z-inverter.....	90
3.4.2	Three-level and Four-wire Inverters with Z-source.....	93
3.5	Summary.....	97
	References.....	98
4	Quality Problems in Smart Networks	107
4.1	Power Quality and EMC.....	107
4.2	Power Quality Issues	110
4.2.1	Magnitude of the Supply Voltage.....	111
4.2.2	Voltage Fluctuation	112
4.2.3	Voltage Dips and Short Supply Interruptions.....	114
4.2.4	Voltage and Current Distortion	116
4.2.5	Classification of Electromagnetic Disturbances	119
4.3	Power Quality Monitoring.....	120
4.3.1	Measuring Procedures	120
4.3.2	Measurement Aggregation Over Time Intervals	120
4.3.3	Flagging Concept.....	121
4.3.4	Assessment Procedures.....	121
4.4	Legal and Organizational Regulations.....	123
4.5	Mitigation Methods.....	124
4.6	EMC Related Phenomena in Smart Electrical Power Systems.....	125
4.6.1	Origin and Effects of Electromagnetic Disturbances and EMC Terminology.....	126
4.6.2	EMC Standardisation.....	132
4.6.3	Conducted EMI Spreading Over Distributed Electrical Power Systems.....	135
4.6.4	Improving EMC of Distributed Power Systems	139
	References.....	144
5	EMC Cases in Distributed Electrical Power System	147
5.1	Four-quadrant Frequency Converter.....	147
5.2	Adjustable Speed Drives.....	158
5.3	Multi-level Inverters	163
	References.....	172
6	High Frequency AC Power Distribution Platforms.....	175
6.1	Introduction.....	175
6.2	High Frequency in Space Applications.....	176
6.3	High Frequency in Telecommunications	181
6.4	High Frequency in Computer and Commercial Electronics Systems.....	186
6.5	High Frequency in Automotive and Motor Drives	190
6.5.1	Automotive.....	190
6.5.2	Motor Drives	192

6.6	High Frequency in Microgrids.....	195
6.7	Future Prospects.....	197
6.7.1	Future Drivers and Funding Issues	197
6.7.2	Future Trends and Challenges	198
	Acknowledgement	199
	References.....	200
7	Integration of Distributed Generation with Electrical Power System.....	203
7.1	Distributed Generation Past and Future	203
7.1.1	DG Conversion Energy Systems	204
7.1.2	DG Opportunities	205
7.1.3	DG Classifications, Location and Sizes.....	206
7.2	Interconnection with a Hosting Grid – Parallel Operation.....	207
7.2.1	Interconnection of DG Fueled by Fossil Fuel.....	207
7.2.2	Interconnection of DG Fueled by Non-fossil Fuel	208
7.2.3	Interconnection of DG Fueled by Mix of Fossil and Non-fossil Sources.....	209
7.3	Integration and Interconnection Concerns	211
7.4	Power Injection Principle.....	214
7.5	Power Injection Using Static Compensators.....	216
7.5.1	Fixed VAR Compensation.....	216
7.5.2	Controllable Dynamic VAR Compensators	217
7.6	Power Injection Using Advanced Static Devices.....	220
7.6.1	Static Synchronous Compensator	221
7.6.2	Unified Power Flow Controller	222
7.7	Distributed Generation Contribution to Power Quality Problems	222
7.8	DG Current Challenges.....	224
	References.....	226
8	Active Power Quality Controllers	229
8.1	Dynamic Static Synchronous Compensator.....	229
8.1.1	Topology	229
8.1.2	Principle of Operation	231
8.1.3	Load Compensation.....	233
8.1.4	Voltage Regulation	236
8.2	Other Shunt Controllers Based on D-STATCOM	238
8.2.1	Hybrid Arrangements	238
8.2.2	Controllers with Energy-storage Systems.....	241
8.3	Dynamic Static Synchronous Series Compensators	243
8.3.1	Identification of Separate Components of the Supply-terminal Voltage.....	245
8.3.2	Harmonic Filtration and Balancing of the Voltage in Three-wire Systems	247
8.4	Dynamic Voltage Restorer.....	250
8.4.1	What is a DVR.....	250

8.4.2	Control Strategies of the DVR Arrangements	251
8.5	AC/AC Voltage Regulators	258
8.5.1	Electromechanical Voltage Regulators	259
8.5.2	Step Voltage Regulators	260
8.5.3	Continuous-voltage Regulators	261
	References	263
9	Energy Storage Systems	269
9.1	Introduction	269
9.2	The Structure of Power Storage Devices	271
9.3	Pumped-storage Hydroelectricity	272
9.4	Compressed Air Energy Storage System	278
9.5	Flywheels	282
9.6	Battery Storage	287
9.7	Hydrogen Storage	291
9.8	Superconducting Magnet Energy Storage	295
9.9	Supercapacitors	297
9.10	Application of Energy Storage Devices	299
	References	301
10	Variable and Adjustable Speed Generation Systems	303
10.1	Introduction	303
10.1.1	Conventional Generation Systems	303
10.1.2	Variable and Adjustable Speed Decoupled Generation Systems	306
10.2	Electrical Power Systems	311
10.2.1	Introduction	311
10.2.2	Autonomous Generation Systems with Permanent Magnet Generators	312
10.2.3	Non-autonomous Generation Systems with Permanent Magnet Generators	316
10.2.4	Hybrid Generation Systems	318
10.2.5	Engine Starting in Power Electronic Generation Systems	319
10.3	Prime Movers and the Control System	321
10.3.1	Prime Movers	321
10.3.2	Speed Control Strategies	322
	References	324
11	Grid Integration of Wind Energy Systems	327
11.1	Introduction	327
11.2	System Overview	327
11.3	Wind Energy Converters	330
11.3.1	Energy Conversion	330
11.3.2	Tip Speed Ratio and Power Curve	331
11.3.3	Operation Modes	333
11.3.4	Power Limitation	334

11.3.5	Speed Control.....	336
11.3.6	Power Curves of WECs.....	337
11.4	Grid Integration	339
11.4.1	Generator Types	339
11.4.2	Types of Common Grid Coupling.....	343
11.4.3	Wind Park Design and Energy Management	344
11.4.4	Reactive Power Management in Wind Parks	345
11.5	Power Quality on WECs.....	352
11.5.1	Power Fluctuations and Flicker.....	352
11.5.2	Harmonics	358
11.6	Offshore Wind Energy.....	367
11.6.1	Installation Numbers and Conditions	367
11.6.2	Wind Park Design	367
11.6.3	Transmission Types.....	368
11.7	Future Requirements and Developments	369
11.7.1	WEC Types	369
11.7.2	Energy Management, Storage and Communication	370
11.8	Economics and Reimbursement.....	371
	References.....	372
12	Grid Integration of Photovoltaics and Fuel Cells.....	375
12.1	Introduction.....	375
12.2	Photovoltaics Power Plants.....	375
12.2.1	System Overview	375
12.2.2	Energy Conversion.....	376
12.2.3	Cell Types	377
12.2.4	Modeling of PV Cells.....	378
12.2.5	Modeling of PV Modules	380
12.2.6	Operation Behaviour	381
12.2.7	Inverter Types	381
12.2.8	Plant Design	382
12.2.9	Grid Interfacing and Islanding Detection	383
12.2.10	Power Quality.....	387
12.2.11	Future Development	391
12.2.12	Economics	391
12.3	Fuel Cell Power Plants.....	392
12.3.1	Fuel Cell Types	392
12.3.2	Energy Conversion.....	396
12.3.3	Grid-connected Applications.....	397
12.3.4	Plant Design	400
12.3.5	Grid Interfacing	402
12.3.6	Economics	403
12.3.7	Future Development	405
	References.....	406
