
Contents

- 1 Introduction..... 1**
 - 1.1 Aim and Scope of the Book..... 1
 - 1.2 Brief Overview..... 5

- 2 Failure Rate and Mean Remaining Lifetime 9**
 - 2.1 Failure Rate Basics 10
 - 2.2 Mean Remaining Lifetime Basics..... 13
 - 2.3 Lifetime Distributions and Their Failure Rates 19
 - 2.3.1 Exponential Distribution..... 19
 - 2.3.2 Gamma Distribution 20
 - 2.3.3 Exponential Distribution with a Resilience Parameter 22
 - 2.3.4 Weibull Distribution..... 23
 - 2.3.5 Pareto Distribution..... 24
 - 2.3.6 Lognormal Distribution 25
 - 2.3.7 Truncated Normal Distribution..... 26
 - 2.3.8 Inverse Gaussian Distribution 27
 - 2.3.9 Gompertz and Makeham–Gompertz Distributions..... 27
 - 2.4 Shape of the Failure Rate and the MRL Function..... 28
 - 2.4.1 Some Definitions and Notation 28
 - 2.4.2 Glaser’s Approach 30
 - 2.4.3 Limiting Behaviour of the Failure Rate and the MRL Function... 36
 - 2.5 Reversed Failure Rate 39
 - 2.5.1 Definitions..... 39
 - 2.5.2 Waiting Time..... 42
 - 2.6 Chapter Summary 43

- 3 More on Exponential Representation 45**
 - 3.1 Exponential Representation in Random Environment..... 45
 - 3.1.1 Conditional Exponential Representation 45
 - 3.1.2 Unconditional Exponential Representation 47
 - 3.1.3 Examples 48
 - 3.2 Bivariate Failure Rates and Exponential Representation..... 52

3.2.1	Bivariate Failure Rates	52
3.2.2	Exponential Representation of Bivariate Distributions	54
3.3	Competing Risks and Bivariate Ageing.....	59
3.3.1	Exponential Representation for Competing Risks.....	59
3.3.2	Ageing in Competing Risks Setting	60
3.4	Chapter Summary	65
4	Point Processes and Minimal Repair	67
4.1	Introduction – Imperfect Repair.....	67
4.2	Characterization of Point Processes	70
4.3	Point Processes for Repairable Systems	72
4.3.1	Poisson Process	72
4.3.2	Renewal Process.....	73
4.3.3	Geometric Process	76
4.3.4	Modulated Renewal-type Processes	79
4.4	Minimal Repair.....	81
4.4.1	Definition and Interpretation	81
4.4.2	Information-based Minimal Repair	83
4.5	Brown–Proschan Model	84
4.6	Performance Quality of Repairable Systems	85
4.6.1	Perfect Restoration of Quality	86
4.6.2	Imperfect Restoration of Quality	88
4.7	Minimal Repair in Heterogeneous Populations	89
4.8	Chapter Summary	92
5	Virtual Age and Imperfect Repair	93
5.1	Introduction – Virtual Age.....	93
5.2	Virtual Age for Non-repairable Objects.....	95
5.2.1	Statistical Virtual Age	95
5.2.2	Recalculated Virtual Age.....	98
5.2.3	Information-based Virtual Age.....	102
5.2.4	Virtual Age in a Series System.....	105
5.3	Age Reduction Models for Repairable Systems	107
5.3.1	G-renewal Process	107
5.3.2	‘Sliding’ Along the Failure Rate Curve.....	109
5.4	Ageing and Monotonicity Properties	115
5.5	Renewal Equations	123
5.6	Failure Rate Reduction Models	125
5.7	Imperfect Repair <i>via</i> Direct Degradation	127
5.8	Chapter Summary	130
6	Mixture Failure Rate Modelling.....	133
6.1	Introduction – Random Failure Rate.....	133
6.2	Failure Rate of Discrete Mixtures.....	138
6.3	Conditional Characteristics and Simplest Models	139
6.3.1	Additive Model.....	141
6.3.2	Multiplicative Model.....	143

6.4	Laplace Transform and Inverse Problem	144
6.5	Mixture Failure Rate Ordering	149
6.5.1	Comparison with Unconditional Characteristic	149
6.5.2	Likelihood Ordering of Mixing Distributions	152
6.5.3	Mixing Distributions with Different Variances	157
6.6	Bounds for the Mixture Failure Rate	159
6.7	Further Examples and Applications	163
6.7.1	Shocks in Heterogeneous Populations	163
6.7.2	Random Scales and Random Usage	164
6.7.3	Random Change Point	165
6.7.4	MRL of Mixtures	167
6.8	Chapter Summary	168
7	Limiting Behaviour of Mixture Failure Rates	171
7.1	Introduction	171
7.2	Discrete Mixtures	172
7.3	Survival Models	175
7.4	Main Asymptotic Results	177
7.5	Specific Models	179
7.5.1	Multiplicative Model	179
7.5.2	Accelerated Life Model	182
7.5.3	Proportional Hazards and Other Possible Models	183
7.6	Asymptotic Mixture Failure Rates for Multivariate Frailty	184
7.6.1	Introduction	184
7.6.2	Competing Risks for Mixtures	185
7.6.3	Limiting Behaviour for Competing Risks	187
7.6.4	Bivariate Frailty Model	189
7.7	Sketches of the Proofs	192
7.8	Chapter Summary	196
8	'Constructing' the Failure Rate	197
8.1	Terminating Poisson and Renewal Processes	197
8.2	Weaker Criteria of Failure	201
8.2.1	Fatal and Non-fatal Shocks	201
8.2.2	Fatal and Non-fatal Failures	205
8.3	Failure Rate for Spatial Survival	207
8.3.1	Obstacles with Fixed Coordinates	207
8.3.2	Crossing the Line Process	210
8.4	Multiple Availability on Demand	213
8.4.1	Introduction	213
8.4.2	Simple Criterion of Failure	215
8.4.3	Two Consecutive Non-serviced Demands	218
8.4.4	Other Weaker Criteria of Failure	221
8.5	Acceptable Risk and Thinning of the Poisson Process	222
8.6	Chapter Summary	223

9	Failure Rate of Software	225
9.1	Introduction	225
9.2	Several Empirical Models for Software Reliability	226
9.2.1	The Jelinski–Moranda Model	227
9.2.2	The Moranda Model	228
9.2.3	The Schick and Wolverton Model	229
9.2.4	Models Based on the Number of Failures	230
9.3	Time-dependant Operational Profile	231
9.3.1	General Setting	231
9.3.2	Special Cases	233
9.4	Chapter Summary	235
10	Demographic and Biological Applications	237
10.1	Introduction	237
10.2	Unobserved Overall Resource	242
10.3	Mortality Model with Anti-ageing	246
10.4	Mortality Rate and Lifesaving	250
10.5	The Strehler–Mildvan Model and Generalizations	252
10.6	‘Quality-of-life Transformation’	253
10.7	Stochastic Ordering for Mortality Rates	255
10.7.1	Specific Population Modelling	256
10.7.2	Definitions of Life Expectancy	260
10.7.3	Comparison of Life Expectancies	263
10.7.4	Further Inequalities	265
10.8	Tail of Longevity	268
10.9	Chapter Summary	273
	References	275
	Index	287

Failure Rate Modelling for Reliability and Risk

Finkelstein, M.

2008, XII, 290 p., Hardcover

ISBN: 978-1-84800-985-1
