|--|-----------|
| <b>Foreword</b>  | <b>v</b>  |
| <b>Introduction</b>  | <b>1</b>  |
| <b>I Symplectic Manifolds</b>                                    | <b>3</b>  |
| <b>1 Symplectic Forms</b>  | <b>3</b>  |
| 1.1 Skew-Symmetric Bilinear Maps . . . . .                       | 3         |
| 1.2 Symplectic Vector Spaces . . . . .                           | 4         |
| 1.3 Symplectic Manifolds . . . . .                               | 6         |
| 1.4 Symplectomorphisms . . . . .                                 | 7         |
| <b>Homework 1: Symplectic Linear Algebra</b>                     | <b>8</b>  |
| <b>2 Symplectic Form on the Cotangent Bundle</b>                 | <b>9</b>  |
| 2.1 Cotangent Bundle . . . . .                                   | 9         |
| 2.2 Tautological and Canonical Forms in Coordinates . . . . .    | 9         |
| 2.3 Coordinate-Free Definitions . . . . .                        | 10        |
| 2.4 Naturality of the Tautological and Canonical Forms . . . . . | 11        |
| <b>Homework 2: Symplectic Volume</b>                             | <b>13</b> |
| <b>II Symplectomorphisms</b>                                     | <b>15</b> |
| <b>3 Lagrangian Submanifolds</b>                                 | <b>15</b> |
| 3.1 Submanifolds . . . . .                                       | 15        |
| 3.2 Lagrangian Submanifolds of $T^*X$ . . . . .                  | 16        |
| 3.3 Conormal Bundles . . . . .                                   | 18        |
| 3.4 Application to Symplectomorphisms . . . . .                  | 19        |
| <b>Homework 3: Tautological Form and Symplectomorphisms</b>      | <b>20</b> |
| <b>4 Generating Functions</b>                                    | <b>22</b> |
| 4.1 Constructing Symplectomorphisms . . . . .                    | 22        |
| 4.2 Method of Generating Functions . . . . .                     | 23        |
| 4.3 Application to Geodesic Flow . . . . .                       | 24        |
| <b>Homework 4: Geodesic Flow</b>                                 | <b>27</b> |

|            |  |           |
|------------|--|-----------|
| <b>5</b>   | <b>Recurrence</b>  | <b>29</b> |
| 5.1        | Periodic Points . . . . .  | 29        |
| 5.2        | Billiards . . . . .  | 30        |
| 5.3        | Poincaré Recurrence . . . . .  | 32        |
| <b>III</b> | <b>Local Forms</b>   | <b>35</b> |
| <b>6</b>   | <b>Preparation for the Local Theory</b>                                      | <b>35</b> |
| 6.1        | Isotopies and Vector Fields . . . . .  | 35        |
| 6.2        | Tubular Neighborhood Theorem . . . . .                                       | 37        |
| 6.3        | Homotopy Formula . . . . .   | 39        |
|            | <b>Homework 5: Tubular Neighborhoods in <math>\mathbb{R}^n</math></b>        | <b>41</b> |
| <b>7</b>   | <b>Moser Theorems</b>  | <b>42</b> |
| 7.1        | Notions of Equivalence for Symplectic Structures . . . . .                   | 42        |
| 7.2        | Moser Trick . . . . .  | 42        |
| 7.3        | Moser Local Theorem . . . . .  | 45        |
| <b>8</b>   | <b>Darboux-Moser-Weinstein Theory</b>  | <b>46</b> |
| 8.1        | Classical Darboux Theorem . . . . .  | 46        |
| 8.2        | Lagrangian Subspaces . . . . .   | 46        |
| 8.3        | Weinstein Lagrangian Neighborhood Theorem . . . . .                          | 48        |
|            | <b>Homework 6: Oriented Surfaces</b>   | <b>50</b> |
| <b>9</b>   | <b>Weinstein Tubular Neighborhood Theorem</b>                                | <b>51</b> |
| 9.1        | Observation from Linear Algebra . . . . .                                    | 51        |
| 9.2        | Tubular Neighborhoods . . . . .  | 51        |
| 9.3        | Application 1:<br>Tangent Space to the Group of Symplectomorphisms . . . . . | 53        |
| 9.4        | Application 2:<br>Fixed Points of Symplectomorphisms . . . . .               | 55        |
| <b>IV</b>  | <b>Contact Manifolds</b>   | <b>57</b> |
| <b>10</b>  | <b>Contact Forms</b>   | <b>57</b> |
| 10.1       | Contact Structures . . . . .   | 57        |
| 10.2       | Examples . . . . .   | 58        |
| 10.3       | First Properties . . . . .   | 59        |
|            | <b>Homework 7: Manifolds of Contact Elements</b>                             | <b>61</b> |

|  |               |
|--|---------------|
| <b>11 Contact Dynamics</b>                           | <b>63</b>     |
| 11.1 Reeb Vector Fields . . . . .                    | 63            |
| 11.2 Symplectization . . . . .                       | 64            |
| 11.3 Conjectures of Seifert and Weinstein . . . . .  | 65            |
| <br><b>V Compatible Almost Complex Structures</b>    | <br><b>67</b> |
| <b>12 Almost Complex Structures</b>                  | <b>67</b>     |
| 12.1 Three Geometries . . . . .                      | 67            |
| 12.2 Complex Structures on Vector Spaces . . . . .   | 68            |
| 12.3 Compatible Structures . . . . .                 | 70            |
| <br><b>Homework 8: Compatible Linear Structures</b>  | <br><b>72</b> |
| <b>13 Compatible Triples</b>                         | <b>74</b>     |
| 13.1 Compatibility . . . . .                         | 74            |
| 13.2 Triple of Structures . . . . .                  | 75            |
| 13.3 First Consequences . . . . .                    | 75            |
| <br><b>Homework 9: Contractibility</b>               | <br><b>77</b> |
| <b>14 Dolbeault Theory</b>                           | <b>78</b>     |
| 14.1 Splittings . . . . .                            | 78            |
| 14.2 Forms of Type $(\ell, m)$ . . . . .             | 79            |
| 14.3 $J$ -Holomorphic Functions . . . . .            | 80            |
| 14.4 Dolbeault Cohomology . . . . .                  | 81            |
| <br><b>Homework 10: Integrability</b>                | <br><b>82</b> |
| <br><b>VI Kähler Manifolds</b>                       | <br><b>83</b> |
| <b>15 Complex Manifolds</b>                          | <b>83</b>     |
| 15.1 Complex Charts . . . . .                        | 83            |
| 15.2 Forms on Complex Manifolds . . . . .            | 85            |
| 15.3 Differentials . . . . .                         | 86            |
| <br><b>Homework 11: Complex Projective Space</b>     | <br><b>89</b> |
| <b>16 Kähler Forms</b>                               | <b>90</b>     |
| 16.1 Kähler Forms . . . . .                          | 90            |
| 16.2 An Application . . . . .                        | 92            |
| 16.3 Recipe to Obtain Kähler Forms . . . . .         | 92            |
| 16.4 Local Canonical Form for Kähler Forms . . . . . | 94            |
| <br><b>Homework 12: The Fubini-Study Structure</b>   | <br><b>96</b> |

|   |                |
|---|----------------|
| <b>17 Compact Kähler Manifolds</b>                      | <b>98</b>      |
| 17.1 Hodge Theory . . . . .                             | 98             |
| 17.2 Immediate Topological Consequences . . . . .       | 100            |
| 17.3 Compact Examples and Counterexamples . . . . .     | 101            |
| 17.4 Main Kähler Manifolds . . . . .                    | 103            |
| <br><b>VII Hamiltonian Mechanics</b>                    | <br><b>105</b> |
| <b>18 Hamiltonian Vector Fields</b>                     | <b>105</b>     |
| 18.1 Hamiltonian and Symplectic Vector Fields . . . . . | 105            |
| 18.2 Classical Mechanics . . . . .                      | 107            |
| 18.3 Brackets . . . . .                                 | 108            |
| 18.4 Integrable Systems . . . . .                       | 109            |
| <br><b>Homework 13: Simple Pendulum</b>                 | <br><b>112</b> |
| <b>19 Variational Principles</b>                        | <b>113</b>     |
| 19.1 Equations of Motion . . . . .                      | 113            |
| 19.2 Principle of Least Action . . . . .                | 114            |
| 19.3 Variational Problems . . . . .                     | 114            |
| 19.4 Solving the Euler-Lagrange Equations . . . . .     | 116            |
| 19.5 Minimizing Properties . . . . .                    | 117            |
| <br><b>Homework 14: Minimizing Geodesics</b>            | <br><b>119</b> |
| <b>20 Legendre Transform</b>                            | <b>121</b>     |
| 20.1 Strict Convexity . . . . .                         | 121            |
| 20.2 Legendre Transform . . . . .                       | 121            |
| 20.3 Application to Variational Problems . . . . .      | 122            |
| <br><b>Homework 15: Legendre Transform</b>              | <br><b>125</b> |
| <br><b>VIII Moment Maps</b>                             | <br><b>127</b> |
| <b>21 Actions</b>                                       | <b>127</b>     |
| 21.1 One-Parameter Groups of Diffeomorphisms . . . . .  | 127            |
| 21.2 Lie Groups . . . . .                               | 128            |
| 21.3 Smooth Actions . . . . .                           | 128            |
| 21.4 Symplectic and Hamiltonian Actions . . . . .       | 129            |
| 21.5 Adjoint and Coadjoint Representations . . . . .    | 130            |
| <br><b>Homework 16: Hermitian Matrices</b>              | <br><b>132</b> |

|   |                |
|---|----------------|
| <b>22 Hamiltonian Actions</b>                                   | <b>133</b>     |
| 22.1 Moment and Comoment Maps . . . . .                         | 133            |
| 22.2 Orbit Spaces . . . . .                                     | 135            |
| 22.3 Preview of Reduction . . . . .                             | 136            |
| 22.4 Classical Examples . . . . .                               | 137            |
