

# Contents

<b>1</b>	<b>An Introduction to Barrier Separation .....</b>	<b>1</b>
1.1	Separation is ... ..	1
1.2	Barrier separation is ... ..	3
1.3	Membranes, economy of size and affinity .....	5
1.4	Driving force, actuating barrier interference .....	8
1.5	Dynamics of barrier separation .....	10
1.6	On units and dimensions .....	12
	Bibliography.....	15
	References.....	15
	Text books.....	15
	Background reading.....	15
<b>2</b>	<b>The Thermodynamic Connection .....</b>	<b>17</b>
2.1	Mixtures and solutions.....	17
2.1.1	The solute has no vapor pressure .....	17
2.1.2	The solute has vapor pressure.....	19
2.1.3	On thermodynamic activity .....	23
2.2	The driving force in barrier separation.....	25
2.2.1	The chemical potential, no barrier .....	26
2.2.2	The chemical potential, barrier inclusive.....	27
2.2.3	Chemical potential and separation.....	29
2.3	The master flux equation .....	31
2.3.1	Sorption.....	32
2.3.2	Diffusivity.....	34
2.3.3	Membrane thickness .....	36
	Bibliography.....	37
	References.....	37
	Background.....	37

<b>3</b>	<b>Osmosis et cetera.....</b>	<b>39</b>
3.1	Osmosis.....	39
3.1.1	Osmotic investigations .....	39
3.1.2	The law of osmotic pressure .....	41
3.1.3	Osmotic pressure illustrated .....	43
3.2	Reverse osmosis .....	46
3.2.1	Solvent flux and solute rejection .....	46
3.2.2	Model implications .....	48
3.2.3	Dynamic reverse osmosis .....	51
3.2.4	Energy considerations .....	54
3.2.5	Reverse osmosis in the real world .....	56
3.3	The power of osmosis.....	59
3.3.1	The osmotic pump .....	59
3.3.2	Osmotic power generation .....	60
	Bibliography.....	62
<b>4</b>	<b>Membrane Filtration.....</b>	<b>63</b>
4.1	On size and size exclusion.....	63
4.2	Liquid transport in membrane filtration.....	66
4.2.1	Concentration polarization.....	68
4.2.2	Gel polarization .....	71
4.3	Solute transport in membrane filtration .....	74
4.4	Rating porous membranes.....	76
4.5	Notable applications.....	78
	Bibliography.....	80
<b>5</b>	<b>Pervaporation versus Evaporation .....</b>	<b>81</b>
5.1	Phenomenon and realization.....	81
5.2	Mass transport and selectivity .....	82
5.3	The capability of pervaporation .....	87
5.4	Hydrophilic pervaporation .....	88
5.4.1	General observations .....	88
5.4.2	Pervaporation versus reverse osmosis .....	91
5.5	Organophilic pervaporation .....	93
5.5.1	General observations .....	93
5.5.2	High boiler pervaporation.....	96
5.5.3	Butanol, a glimpse at bioseparations .....	99

---

5.6	Pervaporation in perspective .....	103
	Bibliography .....	103
	References .....	103
	Reviews .....	104
<b>6</b>	<b>What Membranes are About .....</b>	<b>105</b>
6.1	Prelude: Collodion membranes .....	105
6.2	Membrane polymers – polymer membranes .....	106
6.3	Like dissolves like .....	109
6.4	Microporous barriers .....	111
	Bibliography .....	112
<b>7</b>	<b>Tracing Membrane Science, an Historical Account .....</b>	<b>113</b>
	Literature cited .....	119
	<b>Appendix .....</b>	<b>121</b>
<b>A</b>	<b>Properties of Aqueous Solutions .....</b>	<b>123</b>
<b>B</b>	<b>Criteria of Technical Water Quality .....</b>	<b>125</b>
	Hardness .....	125
	Alkalinity .....	126
	Corrosiveness .....	127
<b>C</b>	<b>Marker Molecules .....</b>	<b>129</b>
	Synthetic macromolecules .....	130
<b>D</b>	<b>Membrane Polymers .....</b>	<b>131</b>
	Natural polymeric materials .....	131
	Synthetic polymers .....	131
	Synthetic copolymers (elastomers) .....	132
<b>E</b>	<b>Microporous Structures .....</b>	<b>133</b>
	<b>Subject Index .....</b>	<b>141</b>

Liquid Separations with Membranes  
An Introduction to Barrier Interference

Böddeker, K.W.

2008, XVI, 146 p. 40 illus., Hardcover

ISBN: 978-3-540-47451-7
