Introduction	v
Keywords, chapter by chapter	vii
1 The Gaussian space of BM	1
1.1 A realization of Brownian bridges	2
1.2 The filtration of Brownian bridges	3
1.3 An ergodic property	5
1.4 A relationship with space-time harmonic functions	7
1.5 Brownian motion and Hardy's inequality in L^2	11
1.6 Fourier transform and Brownian motion	14
2 The laws of some quadratic functionals of BM	17
2.1 Lévy's area formula and some variants	18
2.2 Some identities in law and an explanation of them via Fubini's theorem	24
2.3 The laws of squares of Bessel processes	27

3	Squares of Bessel processes and Ray-Knight theorems for Brownian local times	31
3.1	The basic Ray-Knight theorems	32
3.2	The Lévy-Khintchine representation of Q_x^δ	34
3.3	An extension of the Ray-Knight theorems	37
3.4	The law of Brownian local times taken at an independent exponential time	39
3.5	Squares of Bessel processes and squares of Bessel bridges	41
3.6	Generalized meanders and squares of Bessel processes	47
3.7	Generalized meanders and Bessel bridges	51
4	An explanation and some extensions of the Ciesielski-Taylor identities	57
4.1	A pathwise explanation of (4.1) for $\delta = 1$	58
4.2	A reduction of (4.1) to an identity in law between two Brownian quadratic functionals.....	59
4.3	Some extensions of the Ciesielski-Taylor identities	60
4.4	On a computation of Földes-Révész	64
5	On the winding number of planar BM	67
5.1	Preliminaries.....	67
5.2	Explicit computation of the winding number of planar Brownian motion	70

6	On some exponential functionals of Brownian motion and the problem of Asian options	79
6.1	The integral moments of $A_t^{(\nu)}$	81
6.2	A study in a general Markovian set-up	84
6.3	The case of Lévy processes	87
6.4	Application to Brownian motion	88
6.5	A discussion of some identities	96
7	Some asymptotic laws for multidimensional BM	101
7.1	Asymptotic windings of planar BM around n points	102
7.2	Windings of BM in \mathbb{R}^3	105
7.3	Windings of independent planar BM 's around each other	107
7.4	A unified picture of windings	107
7.5	The asymptotic distribution of the self-linking number of BM in \mathbb{R}^3	109
8	Some extensions of Paul Lévy's arc sine law for BM	115
8.1	Some notation	116
8.2	A list of results	117
8.3	A discussion of methods - Some proofs	120
8.4	An excursion theory approach to F. Petit's results	125
8.5	A stochastic calculus approach to F. Petit's results	133

9	Further results about reflecting Brownian motion perturbed by its local time at 0	137
9.1	A Ray-Knight theorem for the local times of X , up to τ_s^μ , and some consequences	137
9.2	Proof of the Ray-Knight theorem for the local times of X ...	140
9.3	Generalisation of a computation of F. Knight	144
9.4	Towards a pathwise decomposition of $(X_u; u \leq \tau_s^\mu)$	149
10	On principal values of Brownian and Bessel local times ...	153
10.1	Yamada's formulae	154
10.2	A construction of stable processes, involving principal values of Brownian local times	157
10.3	Distributions of principal values of Brownian local times, taken at an independent exponential time	158
10.4	Bertoin's excursion theory for BES(d), $0 < d < 1$	159
11	Probabilistic representations of the Riemann zeta function and some generalisations related to Bessel processes	165
11.1	The Riemann zeta function and the 3-dimensional Bessel process	165
11.2	The right hand side of (11.4), and the agreement formulae between laws of Bessel processes and Bessel bridges	169
11.3	A discussion of the identity (11.8)	171
11.4	A strengthening of Knight's identity, and its relation to the Riemann zeta function	175
11.5	Another probabilistic representation of the Riemann zeta function	178

Contents	xiii
11.6 Some generalizations related to Bessel processes	178
11.7 Some relations between X^ν and $\Sigma^{\nu-1} \equiv \sigma_{\nu-1} + \sigma'_{\nu-1}$	182
11.8 $\zeta^\nu(s)$ as a function of ν	186
References	189
Further general references about BM and Related Processes	195
