## PART I

### INTRODUCTION TO ASYMMETRIC CONTINUUM AND EXPERIMENTAL EVIDENCE

#### OF ROTATION MOTIONS.....1

#### 1 Introduction to Asymmetric Continuum: Fundamental Point Deformations

*Roman Teisseyre and Marek Górski*.....3

1.1 Introduction .....3

1.2 Self-Field Nuclei: Deviations from Classical Elasticity.....8

1.3 Basic Deformations and Simple Motions in an Asymmetric  
Continuum .....10

1.4 Conclusions .....13

#### 2 Measurement of Short-Period Weak Rotation Signals

*Leszek R. Jaroszewicz and Jan Wyszniowski* .....17

2.1 Definition of Rotation and a Review of the  
Measurement Methods .....17

2.2 Classification of Rotation Measurements and  
Requirements for Recording Instruments.....25

2.3 The Influence of Recording Error on the Computed  
Rotation Signal.....27

2.4 Direct Detection of the Rotational Component.....37

2.5 Conclusions .....42

#### 3 Buildings as Sources of Rotational Waves

*Mihailo D. Trifunac* .....49

3.1 Introduction .....49

3.2 Soil-Foundation Interaction – Near Field.....51

3.3 Soil-Foundation Interaction – Far Field .....62

3.4 Summary .....62

#### 4 Two-Pendulum Systems for Measuring Rotations

*Vladimir Graizer*.....67

4.1 Introduction .....67

4.2	Theory .....	68
4.3	Testing and Measurements .....	73
4.4	Discussion and Conclusions .....	73
<b>5</b>	<b>Theory and Observations: Some Remarks on Rotational Motions</b>	
	<i>Roman Teisseyre</i> .....	77
5.1	Ten Motions and Deformations .....	77
5.2	Recording Spin and Twist .....	78
5.3	Rotation Motions in the Universe .....	79
 <b>PART II</b>		
<b>CONTINUUM WITH DEFECT DENSITIES</b>		
<b>AND ASYMMETRY OF FIELDS .....</b>		
<b>83</b>		
<b>6</b>	<b>Field Invariant Representation: Dirac Tensors</b>	
	<i>Jan Wiszniowski and Roman Teisseyre</i> .....	85
6.1	Introduction .....	85
6.2	Axial and Deviatoric Parts of any Symmetric Tensor .....	85
6.3	Dirac Tensors .....	86
6.4	Motion Equations: Classical Elasticity .....	88
6.5	Diagonal and Off-Diagonal Symmetric Tensor Representation .....	89
6.6	Particular Cases .....	90
6.7	Conclusion .....	93
<b>7</b>	<b>Asymmetric Continuum: Standard Theory</b>	
	<i>Roman Teisseyre</i> .....	95
7.1	Introduction .....	95
7.2	Standard Asymmetric Theory: Basic Assumptions .....	97
7.3	Spin and Twist Motions .....	100
7.4	Defects: Dislocation and Disclination Densities .....	101
7.5	Balance Laws for the Rotation Field and the EM Analogy .....	103
	Appendix: Continuum with Internal Nuclei .....	104
<b>8</b>	<b>Fracture Processes: Spin and Twist-Shear Coincidence</b>	
	<i>Roman Teisseyre, Marek Górski, and Krzysztof P. Teisseyre</i> .....	111
8.1	Introduction .....	111
8.2	Approaching Fracture: Constitutive Laws for Mylonite Zones .....	116
8.3	Slip Propagation and Spin Release Hypothesis .....	118
8.4	Conclusions .....	122

<b>9</b>	<b>Inplane and Antiplane Fracturing in a Multimode Random Sequence</b>	
	<i>Wojciech Boratyński</i> .....	123
9.1	Introduction .....	123
9.2	Standard Asymmetric Theory of Continuum .....	123
9.3	Dislocation Flow on Slip Plane .....	126
9.4	Numerical Simulation of Dislocation Flow Pattern .....	128
9.5	Discussion .....	136
<b>10</b>	<b>Charged Dislocations and Various Sources of Electric Field Excitation</b>	
	<i>Krzysztof P. Teisseyre</i> .....	137
10.1	Introduction .....	137
10.2	Effects of Varying and Transient Polarization Due to Mechanical Stimulation .....	139
10.3	Electrokinetics and the Properties of Water .....	144
10.4	Less-Known Mechanisms of Charge Separation .....	149
10.5	Pre-earthquake Stress Variations as the Source of Rotations and Electric Processes .....	155
10.6	Charge Separation and the Rise of Current .....	156
10.7	Large-Scale Electric Circuits .....	156
10.8	Final Remarks .....	158
<b>11</b>	<b>Friction and Fracture Induced Anisotropy: Asymmetric Stresses</b>	
	<i>Roman Teisseyre</i> .....	163
11.1	Introduction .....	163
11.2	2D Uniform Anisotropy .....	164
11.3	2D Fracture/Friction Induced Anisotropy .....	167
11.4	Conclusions .....	168
<b>12</b>	<b>Asymmetric Fluid Dynamics: Extreme Phenomena</b>	
	<i>Roman Teisseyre</i> .....	171
12.1	Introduction .....	171
12.2	Standard Asymmetric Fluid Theory .....	171
12.3	Conclusions .....	174
<b>13</b>	<b>Fracture Band Thermodynamics</b>	
	<i>Roman Teisseyre</i> .....	175
13.1	Introduction .....	175
13.2	Earthquake Dislocation Theory .....	176
13.3	Fracture Band Model .....	178

13.4	Earthquake Thermodynamics.....	179
13.5	Conclusions .....	184
<b>14</b>	<b>Interaction Asymmetric Continuum Theory</b>	
	<i>Roman Teisseyre</i> .....	187
14.1	Introduction .....	187
14.2	Thermal Interaction Field.....	189
14.3	Dislocation Related Polarization: Polarization Gradient Theory .....	189
14.4	Conclusion.....	191
<b>15</b>	<b>Fracture Physics Based on a Soliton Approach</b>	
	<i>Eugeniusz Majewski</i> .....	193
15.1	Introduction .....	193
15.2	The Dilaton Mechanism .....	193
15.3	The Nonlinear Klein-Gordon Equation.....	194
15.4	Coupled Klein-Gordon Equations Applied to Modeling a Two-Layer Model .....	196
15.5	The Generalized Korteweg-de Vries (KdV) Equation .....	198
15.6	The Spin and Twist Strain Solitons.....	199
15.7	Splitting the Spin Strain Solitons Propagating along the Fracture Surface into the Fracture-Zone Related Part and the Elastic Part .....	200
15.8	The Sine-Gordon Model of Moving Dislocations.....	201
15.9	Soliton Ratchets.....	202
15.10	The Generalized Sine-Gordon Model of Rock Fracture.....	203
15.11	Links Between Solitons and Moving Cracks .....	204
15.12	Fracture Solitons in Polymer Chains.....	204
15.13	Chaos of Soliton Systems.....	204
15.14	The Soliton Complexes .....	204
15.15	The Soliton Arrays .....	205
15.16	Conclusions .....	206
<b>16</b>	<b>Canonical Approach to Asymmetric Continua</b>	
	<i>Eugeniusz Majewski</i> .....	209
16.1	Introduction .....	209
16.2	Hamilton's Principle .....	210
16.3	Action of Spin and Twist Fields.....	211
16.4	The Euler-Lagrange Equations.....	212
16.5	Additive Decomposition of the Lagrangian .....	214
16.6	The Canonical Equations (Hamilton's Equations).....	214
16.7	Conclusions .....	217

**PART III****DEFORMATIONS IN RIEMANNIAN GEOMETRY .....219****17 Continuum Theory of Defects: Advanced Approaches***Hiroyuki Nagahama and Roman Teisseyre .....221*

17.1 Geometry of Deformation .....221

17.2 Deformation Measures and Incompatibility .....225

17.3 Evolution Equations for Stresses and Dislocations .....228

17.4 Source/Sink Functions of Dislocation Density .....229

17.5 Virtual Tearing (Kondo 1964).....231

17.6 High-Order Spaces and Non-Locality of Deformation .....233

17.7 Interaction Between Microscopic and Macroscopic  
Fields: Comparison Between the Different Approaches .....235

17.8 Asymmetric and Anholonomic Deformation .....237

17.9 Micromorphic Continuum with Defects.....239

17.10 Taylor-Bishop-Hill Model.....240

**18 Spinors and Torsion in a Riemann-Cartan Approach to  
Elasticity with a Continuous Defect Distribution and  
Analogies to the Einstein-Cartan Theory of Gravitation***Eugeniusz Majewski .....249*

18.1 Introduction .....249

18.2 The Riemann-Cartan Geometry .....252

18.3 Spinors and Spin-Spaces .....254

18.4 Elastic Crystal with a Continuous Defect Distribution .....254

18.5 The Disclination-Curvature Analogy .....256

18.6 The Dislocation-Torsion Analogy .....257

18.7 The Rotational and Translational Strain Tensors .....257

18.8 Description of Moving Defects in 4D .....260

18.9 Rotational Metric.....260

18.10 Complex Vielbein, Rotational Field, and Metric .....261

18.11 Disclination Density and Current Tensor .....261

18.12 Dislocation Density and Current Tensor .....262

18.13 Additive Decomposition of the Total Strain Tensors.....263

18.14 The Einstein-Cartan Theory .....264

18.15 The Analogy Between the Disclination Density  
Tensor and the Einstein Tensor .....265

18.16 The Evolution Equation for the Disclination Density .....266

18.17 The Evolution Equation for the Dislocation Density .....267

18.18 Spin Energy Potential.....267

18.19 Degenerate Asymmetric Continuum in Terms  
of Spinors: Analogy to Maxwell's Equations .....268

18.20 Conclusions .....268

**19 Twistors as Spin and Twist Solitons**

<i>Eugeniusz Majewski</i> .....	273
19.1 Introduction .....	273
19.2 The Twistor Equation .....	273
19.3 Twistor Definition .....	274
19.4 Twistor Quantization Theory Applied to Spin and Twist Solitons .....	274
19.5 The Spin Operator .....	277
19.6 The Twist Operator .....	278
19.7 Spin and Twist Solitons Described by the Nonlinear Schrödinger Equation .....	278
19.8 The Fracture Solitons .....	281
19.9 The Robinson Congruences .....	282
19.10 Conclusions .....	283

**20 Potentials in Asymmetric Continuum: Approach to  
Complex Relativity**

<i>Roman Teisseyre</i> .....	285
20.1 Introduction .....	285
20.2 Natural Potentials .....	286
20.3 Spin and Twist Fields in the Riemannian Space .....	288
20.4 Natural Potentials: Analogy to Electromagnetic Field .....	289
20.5 Complex Relativity Theory .....	290
20.6 Concluding Remarks .....	290

Physics of Asymmetric Continuum: Extreme and  
Fracture Processes

Earthquake Rotation and Soliton Waves

Teisseyre, R.; Nagahama, H.; Majewski, E. (Eds.)

2008, XVI, 293 p. 62 illus., Hardcover

ISBN: 978-3-540-68354-4
