

Contents

Introduction	1
1 Three-Membered Azaheterocycles	5
1.1 Synthesis of Aziridinyl Ketones and Their Chemical Properties	5
1.2 Synthesis of Bi- and Tricyclic Aziridine Derivatives	15
1.3 Chemical Properties of Bi- and Tricyclic Aziridines	20
References	33
2 Five-Membered Azaheterocycles	37
2.1 Reactions with Diazoalkanes	37
2.2 Reactions of Hydrazines and Hydroxylamines	41
2.3 Structure, Chemical and Physicochemical Properties of Pyrazolines References	50 55
3 Six-Membered Azaheterocycles Based on 1,3-Binucleophiles	61
3.1 Reactions of Enamines	62
3.2 Reactions of Urea and Its Analogues	65
3.3 Reactions of Malonic Acid Derivatives	76
3.4 Reactions of Aminoazoles	83
3.5 Reactions of Anilines and Aminoazines	100
3.6 Chemical Properties of Dihydroazines	108
3.7 Tautomerism of Pyridine and Pyrimidine Dihydro Derivatives References	130 136
4 Cyclocondensations of 1,2-Diamines	149
4.1 Synthesis of 1,5-Dihydroazepines	149
4.2 Three-Component Condensation of 1,2-Diamines with Ketones	157
4.3 Reactions of Dihydrobenzodiazepines	163
4.4 Five- and Six-Membered Heterocycles Based on <i>ortho</i> -Diamines References	170 176
Addendum: Selected Synthetic Procedures	181
Index	205

Azaheterocycles Based on α,β -Unsaturated Carbonyls

Chebanov, V.A.; Desenko, S.M.; Gurley, Th.W.

2008, VII, 210 p.,
