

# Contents

<b>1</b>	<b>A Doubt about the Equivalence Principle</b>	<b>1</b>
<b>2</b>	<b>From Minkowski Spacetime to General Relativity</b>	<b>5</b>
2.1	Semi-Euclidean Coordinate Systems	5
2.2	The SE Metric for Uniform Acceleration Is the Only Static SE Metric	10
2.3	The Step to General Relativity	15
2.4	Weak Field Approximation	24
2.5	Geodesic Principle	36
<b>3</b>	<b>Gravity as a Force in Special Relativity</b>	<b>47</b>
<b>4</b>	<b>Applying the Strong Equivalence Principle</b>	<b>51</b>
<b>5</b>	<b>The Debate Continues</b>	<b>59</b>
<b>6</b>	<b>A More Detailed Radiation Calculation</b>	<b>67</b>
<b>7</b>	<b>Defining the Radiation from a Uniformly Accelerating Charge</b>	<b>71</b>
<b>8</b>	<b>Energy Conservation for a Uniformly Accelerated Charge</b>	<b>77</b>
<b>9</b>	<b>The Threat to the Equivalence Principle According to Fulton and Rohrlich</b>	<b>83</b>
<b>10</b>	<b>Different Predictions of Special Relativity and General Relativity</b>	<b>89</b>
10.1	Four Cases for Special Relativity	89
10.2	Four Cases for General Relativity	90
10.3	Conclusion	91

<b>11 Derivation of the Lorentz–Dirac Equation</b>	93
11.1 Parrott’s Derivation	93
11.2 Dirac’s Derivation	101
11.3 Conclusion	104
11.4 Self-Force Calculation	105
<b>12 Extending the Lorentz–Dirac Equation to Curved Spacetime</b>	107
12.1 Equation of Motion of a Charged Particle	107
12.2 The Equivalence Principle in All This	112
12.3 Conclusions	125
<b>13 Static Charge in a Static Spacetime</b>	127
<b>14 A Radiation Detector</b>	137
14.1 Equivalence Principle According to Mould	137
14.2 Construction of the Detector and Calculations in General Coordinates	144
14.3 Detecting Radiation Where There Is None	153
14.4 Conclusion	155
<b>15 The Definitive Mathematical Analysis</b>	157
15.1 Static Gravitational Field	160
15.2 Relation with Minkowski Spacetime	163
15.3 What the Uniformly Accelerated Observer Sees	167
15.4 Coordinate Singularity in the SE Metric	172
15.5 Some Semi-Euclidean Geometry	174
15.6 Redshift in a Uniformly Accelerating SE Frame	179
15.7 Interpreting Semi-Euclidean Coordinates	186
15.8 Accelerations	188
15.9 Fields of a Uniformly Accelerated Charge	196
15.9.1 Obtaining the Vector Potential	196
15.9.2 Obtaining the Electromagnetic Fields	204
15.9.3 Electromagnetic Fields on the Null Surface $z + t = 0$	206
15.9.4 Fixing up the Fields on the Null Surface	212
15.10 Origin of the Delta Function in the Field	217
15.11 Conclusions Regarding the Fields	229
15.11.1 Fields in Region I	229
15.11.2 Fields Along Forward Light Cone of Point on Worldline	232
15.11.3 Equivalence of Advanced and Retarded Fields	234
15.11.4 Comparing Radiated and Coulomb Fields in Region I	236
15.11.5 Situation in Region II	241
15.12 Stress–Energy Tensor	245
15.12.1 Stress–Energy Tensor in Accelerating Frame	246
15.12.2 Energy Flux	247
15.12.3 Boulware’s Conclusion about Energy Flow	252
15.13 General Conclusions	252

<b>16 Interpretation of Physical Quantities in General Relativity</b>	255
16.1 Definition of Energy	257
16.2 Lorentz Boost Killing Vector Field in Minkowski Spacetime	258
16.3 Killing Vector Field for Static Spacetime	261
16.4 Killing Vector Fields for Schwarzschild Spacetime	262
16.5 Another Metric	267
16.6 And Another Metric	269
16.7 Rindler or Elevator Coordinates	270
16.8 The Problem with the Poynting Vector	274
16.9 Schwarzschild Spacetime Revisited	282
16.10 Antithesis of the Present View	284
<b>17 Charged Rocket</b>	289
17.1 Preamble	289
17.2 Calculation	298
17.3 Conclusion	305
<b>18 Summary</b>	307
<b>19 Conclusion</b>	343
<b>References</b>	349
<b>Index</b>	351
