Introduction	1
---------------------------	---

Part I Thermodynamics of Ensembles of Classical Particles

1	Excitations in Simple Atomic Ensembles	7
1.1	Thermodynamics and Dynamics of Particle Ensembles	7
1.2	Interaction of Inert Gas Atoms	9
1.3	Similarity Law for Simple Atomic Ensembles	13
1.4	Evolution of Particle Ensembles	13
1.5	Voids as Elementary Configurational Excitations	17
2	Structures of Ensembles of Interacting Particles	21
2.1	Close-Packed Structures	21
2.2	Shells in Close-Packed Structures	24
2.3	Lennard-Jones Crystal	27
2.4	Morse Crystal	29
2.5	Surface Energy of Lennard-Jones and Morse Crystals	30
2.6	Solid and Liquid Inert Gases Near the Triple Point	33
3	Thermodynamics of Dense Gases and Liquids	39
3.1	Equation of State for an Ensemble of Randomly Distributed Particles	39
3.2	Equilibrium of Gas and Condensed States	42
3.3	Liquid Surface Parameters	45
3.4	Peculiarities of Similarity for Inert Gases	47
3.5	Scaling Law for Molecular Systems	48
4	Clusters with Short-Range Interaction	51
4.1	Configurations of Solid Clusters with Pairwise Atomic Interactions	51

4.2	Peculiarities of Close-Packed Clusters with Short-Range Interaction	53
4.3	Constructing fcc-Clusters with Short-Range Interaction	54
4.4	Growth of fcc Clusters with Short-Range Atomic Interaction	56
4.5	Regular Clusters of Close-Packed Structures	59
4.6	Icosahedral Clusters	64
4.7	Competition of Icosahedral and Close-Packed Structures.....	67
5	Ensembles of Classical Particles with Repulsion.....	75
5.1	Thermodynamics of Ensembles of Repelling Particles	75
5.2	A System of Hard Spheres	77
5.3	Colloid Suspensions as Systems of Repelling Particles	80
5.4	Virial Theorem and Instability of Crystal Structure	82
5.5	Phase Transition for an Ensemble of Repelling Atoms	88
5.6	Phase Transitions in Inert Gases under High Pressure	90
5.7	Structures of an Ensemble of Repelling Particles at Low Temperatures	94
<hr/>		
Part II Configurational Excitations and Aggregate States of Ensembles of Classical Particles		
<hr/>		
6	Configurational Excitation and Voids in Ensembles of Bound Classical Atoms.....	99
6.1	Separation of Thermal and Configurational Degrees of Freedom of Clusters	99
6.2	Lattice Model for the Order–Disorder Phase Transition.....	100
6.3	Chemical Equilibria and Phase Transitions	102
6.4	Internal Voids in a System of Identical Particles	105
6.5	Void Formation in Two Dimensions	109
6.6	The Cell Model for Disk Particles	113
6.7	Peculiarities of Configurational Excitation for Bulk Atomic Systems	115
6.8	Two-State Approximation for Aggregate States.....	117
7	Configurational Cluster Excitation with Pairwise Interactions	121
7.1	Peculiarities of Configurational Excitation of Clusters	121
7.2	Structural Phase Transition in a Solid Cluster.....	127
7.3	Configurational Excitation of the Icosahedral Cluster of 13 Atoms	131
7.4	The Cluster as a Microcanonical Ensemble of Bound Atoms ..	134
7.5	The Cluster as a Canonical Ensemble of Bound Atoms	137

7.6	Configurational Excitation of the Icosahedral Cluster of 55 Atoms	140
7.7	Character of Configuration Transitions in Clusters	146
8	Phase Transitions in Macroscopic Systems of Atoms	149
8.1	Configurational Excitation of a Solid	149
8.2	Modified Lattice Model for Configurational Excitation	151
8.3	Parameters of Voids for Liquid Inert Gases	153
8.4	Voids in a Macroscopic System of Bound Atoms	157
8.5	Criterion of Existence of the Liquid State	157
8.6	Freezing Points for Bulk Inert Gases	160
8.7	General Liquid Properties	161
9	Melting of Clusters and Bulk Atomic Ensembles	163
9.1	Entanglement of Thermal and Configurational Excitations in Clusters	163
9.2	Parameters of Melting	165
9.3	Contradiction Between the Melting Criterion and Its Nature	170
9.4	Definition of the Cluster Aggregate State	171
9.5	Voids as Gateways to Fluidity	173
9.6	Liquid-Gas Interface	175

Part III Dynamics of Configurational Excitations in Ensembles of Classical Particles

10	Coexistence of Cluster Phases	179
10.1	Hierarchy of Equilibrium Times in Clusters	179
10.2	Character of Phase Coexistence in Clusters: Surface Melting ..	181
10.3	Two-Temperature Regime for Cluster Equilibrium	185
10.4	Entropy of an Isolated Cluster in the Two-State Approach ...	187
10.5	Temperatures of an Isolated Cluster Near the Melting Point ..	189
10.6	Cluster Heat Capacity Near the Phase Transition	192
11	Glassy States of an Ensemble of Bound Atoms	199
11.1	Glassy State from the Void Standpoint	199
11.2	Diffusion of Voids in a Bulk Ensemble of Atoms	200
11.3	Cell Model for Vacancy Diffusion Coefficients	202
11.4	Kinetics of Transitions Between Aggregate States	204
11.5	Formation of a Glassy State	206
11.6	Saturated Vapor Pressure Over a Surface in a Glassy State ...	207
11.7	Glassy State for an Ensemble of Repelling Particles	211
11.8	More Peculiarities of Glassy States for Simple Atomic Systems	213

12 Transport of Voids in Nucleation Processes 217

12.1 Peculiarities of Nucleation Processes 217

12.2 Transport of Voids in a Nonuniform Bulk Atomic System 219

12.3 Growth of a Solid Cluster Inside a Liquid
 as Transport of Voids 222

12.4 Wave Mechanism of the Phase Transition 225

13 Conclusion and Summary 231
