Volume I. Superconductivity: Conventional and Unconventional Superconductors

List of Contributors	XV
1 History of Superconductivity: Conventional, High-Transition Temperature and Novel Superconductors	
<i>K. H. Bennemann and J. B. Ketterson</i>	3
1.1 Introduction	3
1.2 Novel Superconductors	9
1.3 Granular Superconductors, Mesoscopic Systems, Josephson Junctions	18
1.4 Outlook	23
References	25
2 Phenomenology and Microscopic Theory: Theoretical Foundations	
<i>L. Pitaevskii</i>	27
2.1 Off-Diagonal Long-Range Order and Superfluidity	27
2.2 Off-Diagonal Long-Range Order in Superconductors	31
2.3 The London Equation	33
2.4 Thermodynamics of Superconductors in a Magnetic Field.....	35
2.5 The Intermediate State of Superconductors	37
2.6 The Ginzburg–Landau Theory	38
2.7 Surface Energy at the Boundary Between Normal and Superconducting Phases	42
2.8 Superconductors of the Second Kind	45
2.9 Quantized Vortex Lines	46
2.10 Vortex–Vortex Interactions	49
2.11 Cooper Pairing	52
2.12 Energy Spectrum of a Superconductor	54
2.13 Thermodynamic Properties of Superconductors	57
2.14 Elements of the Theory of Green’s Functions	62
2.15 Green’s Function of a Superconductor	65
2.16 Temperature Green’s Functions	68
2.17 Temperature Green’s Functions for a Superconductor.....	70
References	71

3	Electron–Phonon Superconductivity	
	<i>F. Marsiglio and J. P. Carbotte</i>	73
3.1	Introduction	74
3.2	The Electron–Phonon Interaction: Overview	74
3.3	The Phonons	92
3.4	The Critical Temperature and the Energy Gap	108
3.5	Thermodynamics and Critical Magnetic Fields	118
3.6	Response Functions	122
3.7	Anisotropy and MgB_2	139
3.8	Summary	145
	Appendix	148
	References	153
4	Coexistence of Singlet Superconductivity and Magnetic Order in Bulk Magnetic Superconductors and SF Heterostructures	
	<i>M. L. Kulić and A. I. Buzdin</i>	163
4.1	Introduction	164
4.2	Ferromagnetic Superconductors	169
4.3	Antiferromagnetic Superconductors (AFS)	180
4.4	Magnetic Superconductors in the Magnetic Field	183
4.5	Josephson Effect with Bulk Magnetic Superconductors	188
4.6	Superconductor/Ferromagnet Heterostructures	189
4.7	Conclusion	196
	Appendix	197
	References	199
5	Theory of Superconducting Alloys	
	<i>L. P. Gor'kov</i>	201
5.1	Introduction	201
5.2	Averages of Green Functions Over Impurities	202
5.3	Superconducting Alloys with a Small Gap	208
5.4	Paramagnetic Alloys and Gapless Superconductivity	216
5.5	Eilenberger Equations	218
5.6	Final Remark	223
	References	224
6	Impurity Nanostructures and Quantum Interference in Superconductors	
	<i>D. K. Morr</i>	225
6.1	Introduction	225
6.2	Review: Single Impurity Effects in Conventional and Unconventional Superconductors	228
6.3	Formalism	231
6.4	Quantum Interference and Quantum Imaging in s -wave Superconductors	234
6.5	Quantum Interference Phenomena in $d_{x^2-y^2}$ -wave Superconductors	244
6.6	Molecules on the Surface of $d_{x^2-y^2}$ -wave Superconductors	250
6.7	Conclusions	253
	References	256

7	Nanostructured Superconductors	
	<i>G. Deutscher</i>	259
7.1	Introduction	259
7.2	Nano-structured Compounds	260
7.3	The Granular Structure	260
7.4	Normal State Transport	262
7.5	Single Grain Behavior	265
7.6	Weakly Coupled Grains: Granular Insulators and Super-Insulators	269
7.7	Well Coupled Grains	272
7.8	Critical Temperature of Granular Superconductors	275
	References	277
8	Proximity-Coupled Systems: Quasiclassical Theory of Superconductivity	
	<i>V. Chandrasekhar</i>	279
8.1	Introduction	279
8.2	Transport Equations in the Diffusive Approximation	280
8.3	The Keldysh Green's Functions	283
8.4	The Quasiclassical Approximation	288
8.5	Non-equilibrium Green's Functions for Superconducting Systems	291
8.6	Quasiclassical Superconducting Green's Functions	294
8.7	The Dirty Limit: The Usadel Equation	297
8.8	Parametrization of the Quasiclassical Green's Function	302
8.9	Applications of the Quasiclassical Equations to Proximity-Coupled Systems	304
8.10	Summary	311
	References	312
9	Principles of Josephson-Junction-Based Quantum Computation	
	<i>S. E. Shafranjuk and J. B. Ketterson</i>	315
9.1	Introduction	316
9.2	Josephson-Junction-Based Qubit Devices	319
9.3	Qubit Dynamics	329
9.4	Quantum Oscillations in Two Coupled Charge Qubits	345
9.5	SISIS Two-Qubit Gate with Intrinsic Coupling	350
9.6	Conclusions	361
	Appendix	362
	References	365
10	Fluctuation Phenomena in Superconductors	
	<i>A. I. Larkin and A. A. Varlamov</i>	369
10.1	Introduction	370
10.2	Ginzburg-Landau Formalism: Thermodynamics	373
10.3	Fluctuations Below the Critical Temperature	390
10.4	Ginzburg-Landau Theory of Fluctuations in Transport Phenomena	396
10.5	Fluctuations Near the S-I Transition	405
10.6	Microscopic Derivation of the Time-Dependent Ginzburg-Landau Equation	410
10.7	Microscopic Theory of Fluctuation Conductivity of Layered Superconductors	416
10.8	Manifestation of Fluctuations in Various Properties	429

10.9	Conclusions	452
	References	453
11	Universal Properties of Cuprate Superconductors: Evidence and Implications	
	<i>T. Schneider</i>	459
11.1	Introduction	459
11.2	Critical Behavior at Finite Temperature	465
11.3	Quantum Critical Behavior and Crossover Phenomena	471
11.4	Thin Films	487
11.5	Concluding Remarks and Comparison with Other Layered Superconductors	487
	References	489
12	Vortex Matter	
	<i>G. Blatter and V. B. Geshkenbein</i>	495
12.1	Introduction	496
12.2	Ginzburg–Landau and London Theories	502
12.3	Vortex Lines	505
12.4	Vortex Lattice	512
12.5	Layered Materials	518
12.6	Anisotropic Scaling Theory	532
12.7	Statistical Mechanics	538
12.8	Quenched Disorder: Pinning and Creep	566
12.9	Uncorrelated Disorder: Collective Pinning and Creep	575
12.10	Correlated Disorder	605
12.11	Surface and Geometrical Barriers	610
12.12	Vortex Glasses	615
12.13	Concluding Remarks	621
	References	625
13	Unconventional Superconductivity in Novel Materials	
	<i>M. B. Maple, E. D. Bauer, V. S. Zapf, and J. Wosnitzer</i>	639
13.1	Introduction	640
13.2	Conventional Superconductors Containing Localized Magnetic Moments	641
13.3	<i>f</i> -Electron Heavy Fermion Superconductors	659
13.4	Organic Superconductors	696
13.5	Layered Cuprate and Ruthenate Superconductors	717
13.6	Comparison of the Properties of Different Classes of Novel Superconductors	741
	References	744

Volume II. Superconductivity: Novel Superconductors

List of Contributors	XV
14 High-T_c Superconductivity	
<i>H. R. Ott</i>	765
14.1 Introduction	765
14.2 Typical Structural Characteristics	767
14.3 Occurrence of Superconductivity	774
14.4 Physical Properties of Copper Oxides	778
14.5 Physical Properties of Non-Cuprate High- T_c Superconductors	813
14.6 Final Remarks	823
References	823
15 Tunneling Spectroscopy of Conventional and Unconventional Superconductors	
<i>J. Zasadzinski</i>	833
15.1 Introduction	833
15.2 Basic Tunneling Phenomenology	835
15.3 Tunneling and Strong-Coupling Effects: Microscopic Picture	841
15.4 Tunneling Spectroscopy of Conventional Superconductors	844
15.5 Tunneling in High-Temperature Superconductors	847
15.6 Heavy Fermion Superconductors	861
15.7 Organic Superconductors	862
15.8 Other Materials	863
15.9 Conclusions	864
References	865
16 Phase-Sensitive Tests of Pairing Symmetry in Cuprate Superconductors	
<i>C. C. Tsuei and J. R. Kirtley</i>	869
16.1 Introduction	869
16.2 Phase Sensitive Tests: Theoretical Background	874
16.3 Phase-Sensitive Tests: Experiments	880
16.4 Angle-Resolved Determination of Gap Anisotropy in YBCO	901
16.5 Universality of the d -Wave Pair State	902
16.6 Implications of d -Wave Pairing Symmetry	907
16.7 Conclusions	912
References	913
17 Photoemission in the High-T_c Superconductors	
<i>J. C. Campuzano, M. R. Norman, and M. Randeria</i>	923
17.1 Introduction	924
17.2 Basics of Angle-Resolved Photoemission	924
17.3 The Valence Band	933
17.4 Normal State Dispersion and the Fermi Surface	935
17.5 Superconducting Energy Gap	948
17.6 Pseudogap	954

17.7	Photoemission Lineshapes and the Electron Self-Energy	963
17.8	Summary	987
	References	988
18	Neutron Scattering and the Magnetic Response of Superconductors and Related Compounds	
	<i>S. M. Hayden</i>	993
18.1	Introduction	993
18.2	The Neutron Scattering Technique	994
18.3	The Static Spin Susceptibility of Superconductors	999
18.4	Magnetic Excitations in Metals and Weakly Coupled Superconductors	1001
18.5	Excitations and Superconductive Pairing	1003
18.6	High Temperature Superconductivity	1004
18.7	Discussion	1023
18.8	Final Remarks	1024
	References	1024
19	Heavy-Fermion Superconductivity	
	<i>P. S. Riseborough, G. M. Schmiedeshoff, and J. L. Smith</i>	1031
19.1	Overview	1031
19.2	Introduction	1033
19.3	Properties of the Normal State	1069
19.4	Properties of the Superconducting State	1103
19.5	Heavy Fermion Superconducting Compounds	1132
19.6	The Conclusion	1140
	References	1141
20	Organic Superconductors	
	<i>M. Lang and J. Müller</i>	1155
20.1	Introduction	1155
20.2	Characteristics of Organic Charge-Transfer Conductors	1157
20.3	Normal-State Properties	1162
20.4	Superconducting-State Properties	1182
20.5	Epilogue	1212
	References	1214
21	Concepts in High Temperature Superconductivity	
	<i>E. W. Carlson, V. J. Emery, S. A. Kivelson, and D. Orgad</i>	1225
21.1	Introduction	1227
21.2	High Temperature Superconductivity is Hard to Attain	1230
21.3	Superconductivity in the Cuprates: General Considerations	1234
21.4	Preview: Our View of the Phase Diagram	1244
21.5	Quasi-1D Superconductors	1245
21.6	Quasi-1D Physics in a Dynamical Stripe Array	1257
21.7	Electron Fractionalization in $D > 1$ as a Mechanism of High Temperature Superconductivity ...	1259
21.8	Superconductors with Small Superfluid Density	1262
21.9	Lessons from Weak Coupling	1272
21.10	Lessons from Strong Coupling	1277

21.11	Lessons from Numerical Studies of Hubbard and Related Models	1286
21.12	Doped Antiferromagnets	1300
21.13	Stripes and High Temperature Superconductivity	1310
	References	1327
22	A Spin Fluctuation Model for d-Wave Superconductivity	
	<i>A. V. Chubukov, D. Pines, and J. Schmalian</i>	1349
22.1	Introduction and Overview	1349
22.2	Spin-Fermion Model	1358
22.3	Summary of Strong-Coupling Theory for Electron-Phonon Pairing	1363
22.4	Strong-Coupling Approach to Spin-Fermion Interaction	1366
22.5	Fingerprints of Spin Fermion Pairing	1377
22.6	Comparison with the Experiments on Cuprates	1389
22.7	Conclusions	1403
22.8	Note Added	1405
	References	1407
23	Electronic Theory for Superconductivity in High-T_c Cuprates and Sr_2RuO_4	
	<i>D. Manske, I. Eremin, and K. H. Bennemann</i>	1415
23.1	Introduction	1416
23.2	Electronic Theory for Hole-Doped and Electron-Doped Cuprates	1428
23.3	Electronic Theory for Ruthenates (Sr_2RuO_4)	1451
23.4	Results for Hole-Doped and Electron-Doped Cuprates	1460
23.5	Results for Sr_2RuO_4	1485
23.6	Summary and Outlook	1496
	Appendix	1497
	References	1511
24	Superfluid ^3He and the Cuprate Superconductors	
	<i>A. J. Leggett</i>	1517
24.1	Introduction: Bose Condensation and Cooper Pairing	1517
24.2	The Normal State: Is the Fermi-Liquid Picture Valid?	1522
24.3	Response Functions: The MIR Peak in the Cuprates	1525
24.4	The Cooper-Paired States of Superfluid ^3He and the Cuprates: General Considerations	1526
24.5	Symmetry of the Order Parameter	1531
24.6	Conclusion	1534
24.7	Summary	1534
	References	1535
