
Contents

1	Introduction	1
1.1	Motivation for Building Small	3
1.2	Nanopatterning Approaches	4
1.3	Electron-Beam Processing	5
1.4	Micro/Nanomachining with Electrons	7
1.5	Outline of the Monograph	12
2	Transport Equations	15
2.1	Energy Carriers: Electrons, Photons and Phonons	16
2.2	Classification of Transport Models	18
2.3	Time and Length Scales	19
2.4	Boltzmann Transport Equation	20
2.4.1	Relaxation-Time Approximation	22
2.5	Intensity Form of Boltzmann Transport Equation	24
2.5.1	Electron-Beam Transport Equation	24
2.5.2	Radiative Transfer Equation	27
2.5.3	Phonon Radiative Transport Equation	29
2.5.4	Electron Transport Equation	30
2.6	Moments of Boltzmann Transport Equation	31
2.6.1	Continuity or Conservation of Number of Particles	32
2.6.2	Conservation of Momentum	34
2.6.3	Conservation of Energy	36
2.6.4	Conservation of Heat Flux	38
2.7	Macroscale Thermal Conduction	39
2.8	Micro/Nanoscale Thermal Conduction	41
2.8.1	Two-Temperature Model	41
2.8.2	Dual-Phase Lag Model	43
2.8.3	Electron-Phonon Hydrodynamic Equations	45
2.9	Nanoscale Thermal Conduction	51
2.10	Thermal Radiation at Nanoscales	52
2.11	Comments	53

3	Modeling of Transport Equations via MC Methods	57
3.1	Cumulative Probability Distribution Function	60
3.2	Building a CPDF Table for a MC Method	61
3.3	Monte Carlo Simulation for Particle-Beam Transport	62
3.3.1	Setting up Computational Grid	63
3.3.2	Random Number Generator	63
3.3.3	Simulation Steps	64
3.3.4	Incident Beam Profiles	66
3.3.5	Direction of Propagation	67
3.3.6	Distance of Interaction	68
3.3.7	Attenuation of Energy	69
3.4	Monte Carlo Simulation for Thermal Conduction by Electrons	70
3.4.1	Initial Electron Distributions	72
3.4.2	Launching of Electrons	73
3.4.3	Non-Equilibrium Fermi-Dirac Distribution	73
3.4.4	Pseudo-Temperature Calculations	74
3.4.5	Scattering of Electrons	75
3.4.6	Boundary Conditions	75
3.5	Monte Carlo Simulation for Phonon Conduction	76
3.5.1	Initial Phonon Distributions	76
3.5.2	Launching and Tracing Phonons	78
3.5.3	Phonon Pseudo-Temperature Calculations	78
3.5.4	Scattering of Phonons	78
3.5.5	Boundary Conditions	79
3.6	Normalization of the Statistical Results	80
3.7	Comments	80
4	Modeling of e-Beam Transport	81
4.1	Electron Scattering Mechanisms	81
4.2	Elastic Scattering of an Electron by an Atom	82
4.2.1	Rutherford Cross Section	84
4.2.2	Mott Cross Section	87
4.3	Continuous Inelastic Scattering Approach: The Bethe Theory	94
4.4	Discrete Inelastic Scattering Treatment: The Dielectric Theory	96
4.5	Electron Reflection and Refraction at a Surface	100
4.6	Monte Carlo Simulation Results and Verifications	101
4.7	Comments	102
5	Thermal Conduction Coupled with e-Beam Transport	105
5.1	Modeling Thermal Transport During Micro/Nanomachining	105
5.2	Thermal Conduction due to Single Electron-Beam Heating	107
5.2.1	Problem Description and Basic Assumptions	107

5.2.2	Computational Grid	109
5.2.3	Electron-Beam Monte Carlo Simulation	111
5.2.4	Auxiliary Heating Using Laser Beam.....	112
5.2.5	Fourier Heat Conduction	114
5.2.6	Modeling “Melting” and “Evaporation”	121
5.2.7	Computational Parameters for Micro/Nanomachining Scenario.....	122
5.2.8	Electron-Beam Deposition Profiles	122
5.2.9	Electron-Beam Heating	122
5.2.10	Comments	125
5.3	Sequential Patterning Using Electron Beam.....	126
5.3.1	Problem Description and Assumptions	126
5.3.2	Computational Methodology.....	127
5.3.3	Computational Parameters	129
5.3.4	Results and Discussions	129
5.3.5	Comments	133
6	Two-Temperature Model Coupled with <i>e</i>-Beam Transport	135
6.1	Two-Temperature Model	135
6.2	Problem Description and Assumptions	137
6.3	Electron-Beam Monte Carlo Simulation	138
6.4	Results and Discussions	139
6.4.1	Electron-Beam Deposition Profiles	139
6.4.2	Two-Temperature Model Predictions.....	140
6.5	Comments	145
7	Thermal Conduction with Electron Flow/Ballistic Behavior	147
7.1	Electron–Phonon Hydrodynamic Modeling.....	148
7.1.1	Governing Equations for Electrons and Phonons.....	148
7.1.2	Physical Domain and Boundary Conditions	150
7.1.3	Thermophysical Properties for the Simulation	152
7.1.4	Results and Discussions	154
7.2	Thermal Conduction by Electrons via Monte Carlo Method ..	156
7.2.1	Electron Band Structure	159
7.2.2	Electron–Electron Scattering.....	159
7.2.3	Electron–Phonon Scattering	161
7.2.4	Monte Carlo Simulation Results	163
7.2.5	Remarks on Electron Conduction Simulations	165
7.3	Comments	166

8	Parallel Computations for Two-Temperature Model	167
8.1	Introduction to Parallelization	167
8.2	Parallelization of the TTM for Micro/Nanomachining	169
8.3	Parallel Computing Resources	170
8.4	Implementation of Parallelization	171
8.5	Parallel Computing Experiment	176
8.6	Parallel Computing Using Parabolic Two Step (PTS) Model	180
8.7	Parallel Computing Including an Electron Beam	181
8.8	Comments	182
9	Molecular Dynamics Simulations	185
9.1	Overview of Molecular Dynamics	186
9.1.1	Interatomic Potential	187
9.1.2	Time Integration of the Equations of Motion	190
9.1.3	Molecular Dynamics in Different Ensembles	191
9.2	Analysis of Atomic Trajectories	191
9.2.1	Equipartition Theorem and the Virial	192
9.2.2	Determination of Phase Change	192
9.2.3	Velocity Autocorrelation Function and Density of States	193
9.2.4	Phonon Spectral Densities	194
9.3	Molecular Dynamics Codes	195
9.3.1	Bulk Simulations	196
9.3.2	Surface Simulations	197
9.4	Coupling of MD with Monte Carlo Method	199
9.5	Simulations of Electron Heating	201
9.6	Comments	202
10	Concluding Remarks	205
A	Derivation of Matrix for the Fourier Conduction Law	209
B	Simplified Electron-Phonon Hydrodynamic Equations	213
C	Thermophysical Properties	219
	References	221
	Index	229

Thermal Transport for Applications in
Micro/Nanomachining

Wong, B.T.; Mengüç, P.M.

2008, XVII, 231 p., Hardcover

ISBN: 978-3-540-73605-9
