

Contents

1	Introduction	1
1.1	An Overview	1
1.1.1	A General Perspective	1
1.1.2	An Aside on Analogy	2
	References	3
1.2	Yeast is a Eukaryotic Model Organism	4
1.2.1	Introduction	4
1.2.2	Model Organisms	4
1.2.3	Yeast	5
1.2.4	Life Cycle of Haploid Yeast	7
1.2.5	Life Cycle of Diploid Yeast	9
1.2.6	Information Transfer from Parents to Descendents	9
1.2.7	Human Life Cycle	13
	References	14
1.3	A Cell as a Biochemical Entity	15
1.3.1	Introduction	15
1.3.2	Chemical Constituents	15
1.3.3	Macroscopic and Microscopic Aspects of Metabolism	16
1.3.4	Biochemical Transactions	17
1.3.5	Energy Transactions	19
	References	23
2	Adaptation to Environment	25
2.1	Growth and Multiplication	25
2.1.1	Introduction	25
2.1.2	Growth Kinetics	25
2.1.3	Effect of Nutrients on Growth	28
2.1.4	Metabolic Strategy	29
	References	33

2.2	Enzyme Adaptation	33
2.2.1	Introduction	33
2.2.2	Adaptation to Nutrients	33
2.2.3	Long-Term Adaptation	35
2.2.4	Single-Cell Analysis of Long-Term Adaptation	36
2.2.5	Galactose Metabolism	38
	References.....	41
2.3	Induction of Leloir Enzymes	42
2.3.1	Introduction	42
2.3.2	Galactose Induces the Synthesis of Leloir Enzymes	43
2.3.3	Galactose Activates the Transcription of <i>GAL</i> Genes	43
2.3.4	Galactose Activates a Genetic Program	46
	References.....	47
3	Genetic Dissection of Galactose Metabolism	49
3.1	Genetic Analysis of <i>GAL</i> Regulon	49
3.1.1	Introduction	49
3.1.2	Mutant Hunt	49
3.1.3	Segregation Analysis	50
3.1.4	Complementation Analysis	50
3.1.5	Concept of an Allele.....	54
3.1.6	Special Cases of Complementation.....	56
3.1.7	Aberrant Segregation and Recombination Model	58
	References.....	61
3.2	Genetic Mapping of <i>GAL</i> Genes	62
3.2.1	Introduction	62
3.2.2	Tetrad Analysis	62
3.2.3	Mapping of <i>GAL</i> Genes by Tetrad Analysis	64
3.2.4	Map Distance and Recombination Frequency	67
3.2.5	An Aside on Mapping of Human Genes by Linkage Analysis.....	69
	References.....	76
4	Genetic Analysis <i>GAL</i> Genetic Switch	79
4.1	Negative Control by the Repressor.....	79
4.1.1	Introduction	79
4.1.2	Discovery of a Repressor of <i>GAL</i> Regulon.....	80
	Reference	82
4.2	Operator Repressor Model of <i>GAL</i> Regulon.....	82
4.2.1	Introduction	82
4.2.2	Testing the Predictions of the Model	82
	References.....	84

4.3	Genetic Interactions	85
4.3.1	Introduction	85
4.3.2	Recessivity and Dominance	85
4.3.3	Negative Dominance	87
4.3.4	Epistasis	87
4.3.5	Allele-Specific Interactions	89
	References	90
4.4	Conditional Lethal Mutations	90
4.4.1	Introduction	90
4.4.2	Temperature-Sensitive Allele of <i>GAL3</i>	91
4.4.3	Temperature-Sensitive Allele of <i>GAL4</i>	92
	References	93
4.5	Revised Model of <i>GAL</i> Genetic Switch	94
4.5.1	Introduction	94
4.5.2	Protein-Protein Interaction Model	94
4.5.3	Interaction Between <i>GAL4</i> and <i>GAL80</i> Proteins	95
	References	97
4.6	Signal Transduction in <i>GAL</i> Regulon	97
4.6.1	Introduction	97
4.6.2	Catalytic Model	98
	References	99
5	Molecular Genetics of <i>GAL</i> Regulon	101
5.1	Cloning: A Perspective	101
5.1.1	Introduction	101
5.1.2	Vectors, Genetic Transformation, and Recombinant DNA Technology	102
5.1.3	DNA Cloning	104
5.1.4	Genomic DNA Library	105
5.1.5	cDNA Library	105
5.1.6	Isolation of Recombinant Clones	106
5.1.7	Development of Yeast Shuttle Vectors	107
	References	110
5.2	Genomic Organization of <i>GAL</i> Cluster	110
5.2.1	Introduction	110
5.2.2	Cloning of the <i>GAL</i> Cluster	111
5.2.3	Analysis of <i>GALI-10</i> Intergenic Region	113
	References	118
5.3	Isolation of <i>GAL4</i> : The Transcriptional Activator	118
5.3.1	Introduction	118
5.3.2	Cloning of <i>GAL4</i> by Functional Complementation	120
5.3.3	<i>GAL4</i> Protein Binds Upstream Activating Sequences	120
5.3.4	<i>GAL4</i> Protein Binds <i>GAL80</i> Protein	123

5.3.5 GAL4 Protein is Modular.....	124
References.....	129
5.4 Isolation of <i>GAL80</i> : The Repressor.....	131
5.4.1 Introduction	131
5.4.2 Cloning of <i>GAL80</i> by Genetic Suppression.....	131
5.4.3 Autogenous Regulation of <i>GAL80</i> Expression	132
5.4.4 Mutational Analysis of <i>GAL80</i>	133
References.....	134
5.5 Isolation of <i>GAL3</i> : The Signal Transducer.....	135
5.5.1 Introduction	135
5.5.2 Cloning of <i>GAL3</i>	135
5.5.3 <i>GAL1</i> and <i>GAL3</i> are Paralogues	137
5.5.4 <i>GAL1</i> is a Degenerate Signal Transducer	137
5.5.5 Autogenous Regulation of <i>GAL3</i> Expression	138
5.5.6 An aside on Positional Cloning.....	138
5.5.7 Restriction Fragment Length Polymorphism	141
References.....	141
6 Signal Transduction Revisited	143
6.1 Revised Model of Signal Transduction	143
6.1.1 Introduction	143
6.1.2 Protein–Protein Interaction Model.....	143
6.1.3 Testing the Predictions of the Protein–Protein Interaction Model	144
6.1.4 Recent Analysis of Signal Transduction	145
References.....	150
6.2 Genetic Dissection of Signal Transduction	150
6.2.1 Introduction	150
6.2.2 Mutational Analysis of <i>GAL3</i>	151
6.2.3 Mutational Analysis of <i>GAL80</i>	154
References.....	155
7 Versatile Galactose Genetic Switch	157
7.1 Transcription Activation	157
7.1.1 Introduction	157
7.1.2 RNA Polymerase II	158
7.1.3 Transcriptional Activation by Recruitment	159
References.....	164
7.2 Glucose Repression	164
7.2.1 Introduction	164
7.2.2 MIG1 Protein is a DNA-Binding Transcriptional Repressor	165

7.2.3 Combined Role of GAL80 and MIG1 Proteins in Glucose Repression	165
7.2.4 Binary and Graded Response	166
7.2.5 <i>GAL4</i> Expression is Repressed by Glucose	169
References.....	170
7.3 Fine Regulation of <i>GAL</i> Genetic Switch.....	170
7.3.1 Introduction	170
7.3.2 Basal and Induced Expression.....	171
7.3.3 Post-Translational Modification of <i>GAL4</i> Protein.....	173
References.....	174
8 Paradigmatic Role of Galactose Switch	175
8.1 <i>GAL</i> Regulon and Genomics	175
8.1.1 Introduction	175
8.1.2 Functional Profiling of Fitness	177
8.1.3 Analysis Genome-Wide DNA Binding.....	179
8.1.4 Genomic Approach for Network Analysis.....	180
References.....	183
8.2 <i>GAL</i> Regulon and Systems Biology	183
8.2.1 Introduction	183
8.2.2 Quantitative Basis of <i>GAL</i> Genetic Switch.....	184
8.2.3 Long-Term Adaptation Revisited.....	188
8.2.4 Feedback Loops of <i>GAL</i> Regulon	190
References.....	193
8.3 Galactose Metabolism and Evolution.....	193
8.3.1 Introduction	193
8.3.2 Evolution of Galactose Metabolism.....	194
8.3.3 Evolution of Genomic Organization of Galactose Metabolic Enzymes.....	196
8.3.4 Adaptive Evolution of Galactose Metabolism	197
8.3.5 Evolution of Regulatory Network of Galactose Metabolism.....	199
8.3.6 Genome Duplication in <i>Saccharomyces</i>	200
References.....	201
8.4 <i>GAL</i> Switch as a Tool.....	202
8.4.1 Introduction	202
8.4.2 High-level Protein Expression.....	202
8.4.3 Dihybrid Analysis.....	203
8.4.4 Dihybrid Approach for Genetic Analysis	204
8.4.5 Genome-Wide Protein–Protein Interaction	206
8.4.6 <i>GAL</i> Switch as a Tool in Higher Organisms	207
References.....	208

8.5	Lessons Learned	208
8.5.1	Introduction	208
8.5.2	Robustness and Fragility	210
8.5.3	Stochasticity and Phenotypic Variation.....	211
	References.....	214
	Index	215

Galactose Regulon of Yeast

From Genetics to Systems Biology

Bhat, P.J.

2008, XIV, 220 p. 93 illus., Hardcover

ISBN: 978-3-540-74014-8
